WREKIN (THE), a noted mountain lying to the E of Shrewsbury in Salop, between the Watling-street and the Severn, 1 m. from Wroxeter. It was a famous station of the Romans. The steepest side of the hill is the eastern. Its height is 1,200 ft. The summit of this hill commands a scene on the W and N of great extent and grandeur, looking right into the central outer positions of the Principality. The views in the opposite directions command the busy mining district of Ketley, Donington, &c., and breaking away from Shifnal, carry the eye into the very heart of the kingdom, over one of the richest and densest manufacturing and mining districts in the empire. The peculiar prominence and distinction of the W. arises from its sudden and abrupt elevation, in a wide and extensive flat county, and its pudding-like form, disconnected from any eminences, except the undulating elevations at Coalbroke-dale. The Shropshire coal-field lies in a triangle, with the Severn as the base, and the apex extending to Lilleshall, overlying the mountain limestone at the latter place and on one of the flanks of the Wrekin. The field is said to possess "ten beds of good workable coal," in some instances 16 ft. in thickness. The sandstone, which has been worked on the side of the W., discloses some curious fantastic forms, and is, in many places, converted into quartz.

WURTEMBERG, or **WIETEMBERG**, a small king-

dom in the SW of Germany, which takes its name from an old castle situated on a mountain not far from Unterturkheim, from the ancient proprietors of which the present dynasty dates its origin. This kingdom, which has the sixth place in the German confederacy, is bounded on the NE, E, and SE, by Bavaria; on the S, for a small distance, by the Lake of Constanx; and on the SW, W, NW, and N, by Baden. Its superficial extent is, according to Rosch, 348 German sq. m.; another calculation estimates it at 362.15 sq. m.; the *Almanach de Gotha* for 1855 states it at 354.14 sq. m. The census of 1817 returned the pop. at 1,397,451; that of December 1852, at 1,733,263.

Physical Features. The surface of the country is mountainous; on the E runs the Suabian Alb, and on the western edge the Black Forest; and from both these chains several branches run off in all directions into the country. The Alb is not so high as the Black Forest, but of a rougher aspect; it presents limestone and sandstone, and several remarkable caves are found in it. None of the mountains in W. reach the snow-line. The highest point of that part of the Black Forest lying in W., is the Katzenkopf, or 'Cat's Head,' 8,603 ft. in height; and the highest point of the Alb is the Sternberg, 2,776 ft. above the level of the sea. There are no plains, but several large fertile valleys, of which those of the Neckar and Danube are the principal. The principal rivers are the Neckar, which receives the Kocher, the Jaxt, and the Enz; the Danube, which receives the Iller and the Blau; the Tauber; the Schussen; and the Arzen. The two latter fall into the lake of Constanx, which is the only large lake in the kingdom. The climate is mild and healthy, though in the higher parts the winters are very severe.

Soil and Produce. A few small tracts excepted, W. is one of the most fertile and well-watered countries in Germany. It generally consists of champaign lands, and pleasant well-watered vales. Its fertility is such, that more grain is raised than suffices for internal consumption, and considerable quantities are exported; but this grain is chiefly that species denominated spelt, rye and wheat being much less cultivated here. Flax and hemp are also cultivated. The valleys are almost covered with forests of fruit-trees, which are also abundant in other parts of the country. In 1826 there were in this kingdom 597 vineyards, comprising 82,729 acres; and the total wine produced was estimated at 184,380 kilderkins, of the value of 3,990,831 florins. The wines are rich, palatable, and wholesome; and are generally denominated 'Neckar wines,' though each has a peculiar name of its own, received from the part where it is produced. Cherries are grown in great quantity in the districts of the Alb and the Black Forest, and used for making the celebrated strong liquor called *kirschwasser*. Game and poultry are abundant, and large herds of horned cattle are reared in various parts of the country. In the neighbourhood of Ulm, a particular branch of industry is the feeding of snails: millions of these animals are fattened here in autumn, and sent to Vienna and Italy.—The mountains abound in marbles of variegated hues, some of which are esteemed equal to those of Italy. Remarkably transparent alabaster, agate, crystalline pebbles, black amber, and fine millstones, are also procured; the other minerals are salt, cobalt, sulphur, coal, and porcelain earth. The salt-works at Sulz produce salt sufficient to supply the kingdom. There are mines of silver and copper near Freudenstadt and at Königswart; of silver at Königstein, and of copper, at Gullach, near Hornberg. Iron is also found, but this useful

mineral was generally brought from Montbelliard, now belonging to France. There are many warm-baths and medicinal springs. Among the former, the most celebrated are those of Wildman. Heilbronn is famous for its medicinal springs. There are also large salt-works in the territory of Suabian Hall, lately ceded to W.

Manufactures and Commerce.] W. is an agricultural and not a manufacturing country; only in a few towns are established manufactures of any extent; several branches of industry, however, such as spinning, weaving, and lace-making, are carried on in this country, besides agriculture. Distilleries and oil-mills of great extent are found in several towns. The articles of exportation are cattle, fat oxen, corn, wood, tar, potash, oil, and a few articles of industry; those of importation are colonial wares, silk, and different articles of foreign manufacture. The wages of the workmen in towns range from 1s. 8d. to 4s. 2d. a week, and in the country from 8d. to 20d. per week, beside board and lodging in each case. Workmen engaged by the year generally board and lodge with their employers, receiving in towns from £4 12s. to £5, and in villages from £1 15s. to £3 10s. per annum. Women and children can gain from £3 10s. to £4 10s. per year.

Inhabitants.] The inhabitants are—with the exception of about 9,000 Jews, and some families of Waldenses, and other colonists—all of German descent, speaking partly the Franconian, and partly the Suabian dialect. There were, in 1817, about 950,832 Lutherans, 432,616 Catholics, 2,308 of the Reformed creed, and 500 or 600 of other sects; the proportions of the different denominations remain, in all probability, much the same, although the gross pop. has considerably increased. There is no established religion. The kingdom of W. is one of the states whose inhabitants possess the right of receiving public assistance in distress. The pop. is divided into two classes, the freemen, and those who do not enjoy the *droit de cité*, called *berühmte*, the latter form a tenth of the whole. The freemen who have acquired their title by purchase or birth, have the right to participate in the revenues of the district or parish of which they are members. The *droit de cité* may be obtained by payment of a sum inferior to that required for the right of freedom; but that payment does not entitle the purchaser to the privileges of the citizens. Nevertheless, whoever is unable to command the necessities of life by trade or labour, or to obtain them by the assistance of friends, may claim the succour of the parish in which he has either of the rights just mentioned. If a man is too poor to purchase the lower right, he is assigned by the police to some one parish. The care of the poor is carried to a high degree of solicitude by the government, so that a death from want in time of dearth would entail the most rigorous punishment on the functionaries who might be found chargeable with neglect of the deceased. A number of parishes possess a fund called *pium corpus*, arising from voluntary contributions and other casual sources, but principally derived from lands which before the Reformation were held by the Catholic church, but which at that period, instead of undergoing confiscation by the government, were set apart for the relief of the poor. Most of the towns have their poor-houses for the reception of the aged and infirm; where those are wanting, the poor are received into all the houses of the inhabitants in turn, or farmed out in small establishments.

State of Education.] W. is one of the most enlightened countries in Germany; it has produced a number of scholars, and two of the most celebrated modern poets of Germany. Wieland and Schiller

were natives of this country. Perhaps no country in Germany, of the same extent, has produced so many distinguished scholars, an honour for which it is indebted to the excellent establishments for education which have always existed here. There is one university, besides a number of gymnasiums, lyceums, and high schools, and several seminaries for Protestant and Catholic clergymen, and schoolmasters. Almost every village has its own school, which is carefully inspected, and provided with well-informed schoolmasters from the seminary at Ealingen. A special law directs that every child must attend school from 6 to 14 years of age, so that in old W., at least, there is scarcely one individual who cannot read and write.

Government.] W. is a constitutional monarchy. The constitution acknowledges equal civil and political rights in every citizen of the state: none are excluded by birth from any employment of the state. Personal liberty, security of property, and perfect liberty of conscience, is guaranteed to every citizen, besides liberty of emigration. The ministers and officers of state are responsible for their acts. The assembly of the state consists of two chambers, the upper one having for its members the princes of the royal family, and the chiefs of those noble families who formerly formed immediate states of the empire, besides certain hereditary members, and members for life, whom the king names; the lower chamber is elective. The transactions of both chambers are published, and the sittings of the lower are public. Without the consent of both chambers no laws can be enacted, changed, or abolished; complaints of faults or abuses in the administration are brought forward in them, and they have the right of granting the budget. The king swears to the constitution when he receives the oath of allegiance. His person is sacred; and he is of age at 18. The succession is hereditary in the male line; the female is only to succeed if the male shall be entirely extinguished. Justice is administered by different courts; the clergy stands under consistories; and the Catholics have a vicar-general. The 6 Catholic convents, which still exist here, are to be suffered to decay with the lives of their present inmates.

Revenue.] The revenue of W. amounted in 1826, according to Balbi, to 23,761,000 francs, or £990,041 13s. 4d. The debt was, in 1817, 30,000,000 florins, for the liquidation of which there existed a fund, which in 1824 had reduced it to 24,152,035 florins, or £2,717,108 18s. 9d. According to Balbi, it was further reduced in 1826 to 56,500,000 francs, or £2,354,166 13s. 4d. The budget for 3 years from 1852-3 to 1854-5 presented an estimated receipt of 36,524,815 florins; and of expenditure 36,530,249 florins. The debt on 30th June 1851 was stated at 48,423,718 florins.

Military force.] By the census of the Rhenish confederation, the military establishment of W. was fixed at 18,000 men, and its contingent at 12,000, which were all called forth at Napoleon's orders, to assist in the Russian campaign. The number of troops furnished to the allies, during the first and second invasions of France, amounted to upwards of 20,000 men; but under the auspices of more peaceful times, the sovereign reduced his military establishment to 8,200 men; and fixed it at 19,017 men, of whom 14,235 are infantry, 2,789 cavalry, and 1,963 artillery in time of war. Every citizen of the state, from the age of 21, is subject to conscription for military service, which lasts 6 years.

Topography.] This kingdom contains 130 towns, 128 boroughs, 1,115 parish villages, 2,410 smaller

villages, 2,591 farms, and 296 castles. It is divided into 4 circles, which have their own administration, and are subdivided into bailiwicks, viz.

Circle of the Neckar.	60 43	501,084

Danube,	118 69	413,444
Jaxt,	93 81	374,913

The circle of the Neckar is an extensive valley, through which the Neckar flows, on both sides bordered by mountains and hills which in some points rise to about 1,560 ft.: on the right side of the river are some smaller valleys, as the Remthal, the Murrthal, and the Kocherthal. All these valleys are fertile and well-watered. Besides the Neckar, the principal rivers are the Ens, the Rems, and the Murr. The climate here is the mildest of the whole kingdom. The population, chiefly Lutheran, are mostly employed in agriculture. Stuttgart, or Stuttgart, the metropolis of the kingdom, lies near the Neckar, and in the middle of W. Proper on the Nesenbach, a few miles above its influx into the Neckar, nearly equidistant from the Danube and the Rhine, and 72 m. to the NE of Strasburg.—The circle of the Black Forest lies in and upon the Black Forest, which covers the whole W part, and spreads several of its branches into the interior; on the E the Alb stretches. It has not so mild a climate as the circle of the Neckar, although several of its valleys are fertile. The Neckar has its sources in this circle, and the Danube flows through a small part of it. Having less agriculture, this circle is more industrious than the former, though there are no extensive manufactures. Spinning and weaving is carried on in the country, and in several towns. Ehingen, on the Schmieda, is one of the most industrious towns of the kingdom, and contains some manufactures of broad cloth, and hosiery. Reutlingen, on the Echaz, has some manufactures, and extensive tanneries. Tübingen, on the Neckar, with near 7,000 inhabitants, is the seat of a university, with 5 faculties, 38 professors, and a library of 30,000 volumes. The circle of the Danube contains 30 towns, 32 boroughs, and 2,015 villages and hamlets. The N part beyond the Danube is covered by the Ranne Alb; the S part consists of ridges of small mountains and hills. The soil of this circle, except on the N, is more fitted than any other in W. for the purposes of the agriculturist. The richest districts are those between the Danube, the Iller, and the Lake of Constance. Fruit is here grown in great quantity. Ulm in this circle, is a considerable city, at the confluence of three rivers, the Blau, Iller, and Danube. Here the Danube becomes navigable by vessels of burden. The territory belonging to it, now transferred to Wurtemberg along with the city, is about 26 m. long, and 18 m. broad. The circle of the Jaxt is in most parts well cultivated, and produces corn, wine, and fruit; but its principal riches consist in cattle, of which a great number is exported. Sheep are also numerous, and bees are extensively reared in some parts.

History. The first notice in history of the lords of W. is in 1139, where we find counts of Wurtemberg, or rather Wirtemberg, as the name of the old castle from which they dated their origin was Wirinberek or Wirtemberg. From Ulrich, count of W., about the middle of the 13th cent., the history of this country runs down in an uninterrupted line to our times. Ulrich, the real founder of the present reigning house, was known as the most enterprising and the most gallant knight in Suabia. Eight times, says an old chronicle, he went to the field, and never was defeated. He died in 1265. His son and successor, Eberhard, reigned above 50 years. He was placed under the ban of the empire by Henry the VII., and driven from his coun-

try; but Henry having died in Italy, Eberhard returned home, and transferred his residence to Stuttgart, as the castle of W. had been dismantled during his absence. His son, and several of his successors, enlarged their territory, which, after having been for a short time divided under two lines of chiefs, was again united under another Count Eberhard, who was raised to the dignity of a duke by Maximilian I., in 1495 and who gave a kind of representative constitution to the country. Duke Ulrich introduced the Reformation in the middle of the 16th cent., and joined the Schmalkaldian league, which led him into a war with Austria. His son Christopher remodelled the legislation and administration of the country. Under his successors, in the 17th cent., the reigning house became divided into three lines. That of Stuttgart was continued by Eberhard, or Everhard III. W. suffered much in the Thirty Years' war. Duke Charles Alexander, who reigned in 1733, became a Catholic, and ruined the finances by the bad administration of a Jew, who was at the head of the finance department, and who was hanged by Charles's successor. He left three sons under age, who all reigned one after the other. The last was Frederic Eugene, who had served in the Seven Years' war under Frederic the Great, and educated his children in the Lutheran creed. He was succeeded by his son, Duke Frederic II., who, after an increase of territory occasioned by exchanges and acquisition, became an elector. He allied with Napoleon against Austria, and obtained, in the peace of Presburg, an augmentation of territory, and the title of king. He was one of the first German princes who entered the Rhenish confederacy on the 12th of July, 1806, when he again obtained an accession of territory. He was a firm adherent to Napoleon's system, but early after the battle of Leipzig entered into negotiations with the allies. He maintained his country on the *status quo* in the congress of Vienna, but joined the German confederacy on the 1st of September, 1815. While the Congress was yet sitting, he summoned the States of his kingdom on the 11th of June, 1815, and laid before them the new constitution he intended to give to his territories. But the resistance of the States of the ancient part of W. prevented the adoption of this new constitution; and the king yielded in so far, that the ancient constitution was to remain in Old W., but not to be extended to the new acquisitions. During these transactions the king died suddenly, on the 28th of October, 1816. He was a man of no common talents and information, and of great firmness and strength of mind; but his strong passions often drove him to commit the most despotical actions. He was succeeded by his son, Wilhelm I., born on the 17th September, 1781. He was married to the princess of Bavaria, but this marriage was dissolved by mutual consent, upon which the princess married the emperor of Austria, and he married the grand-duchess of Russia, sister of the emperor. The present queen, his third wife, is his cousin, and a princess of W. He abolished bondage, and on the 31st of December, 1818, issued an excellent regulation for the organisation of the municipalities, which was to serve as a ground-work for the new constitution. On the 10th of June, 1819, he summoned the States, and expressed his positive determination to establish a new constitution, which was unanimously accepted and proclaimed on the 25th September, 1819. The prince-royal, born in 1823, married in 1846, the grand-duchess Olga, daughter of the Russian czar.

WYCOMBE (HIGH, or CHIPPING), a parish, borough, and market-town in Buckinghamshire, 29 m. W by N of London. Area of p., 6,818 acres.

Pop. in 1801, 4,248; in 1831, 6,299; in 1851, 7,179. The church is an ancient structure in the early style of English architecture, with a square embattled tower crowned with modern pinnacles. The borough first returned members to parliament 28° Edward I., since which time it has always returned 2 members. The new boundaries are much more extensive than the old, being coincident with those of the parish. The town is situated on the road from London to Oxford, and consists principally of one street, with some smaller ones branching off at right angles. A rivulet, called Wycombe stream, flows through it, and afterwards falls into the Thames a little below Marlow. The adjoining country is agreeably diversified with hills covered with wood. Wycombe-abbey, the seat of Lord Carrington, is situated in a bottom near the town, in a park of about 200 acres. Many of the inhabitants of W. are engaged in the manufacture of paper, which has been carried on here to a great extent, numerous mills on the Wick river and another stream in the manufacturing district, being kept in active operation. On Wycombe stream are also several mills for the grinding of corn. Lace is manufactured to a considerable extent, as also some articles of wood, such as chairs. The prosperity of Wycombe, however, has been chiefly sustained by the great traffic constantly passing through it, a source of emolument not benefited by the opening of the Great Western railway, which passes about 9 or 10 m. to the S of the town. This place is undoubtedly of great antiquity, and is supposed by some to have been founded by the Romans. The word *cheap*, is the Saxon term for 'a market,' which proves it to have been occupied by that people, and the remains called Desborough-castle are generally supposed to have been of Saxon origin, and to have been intended to keep off the invasions of the Danes. W. gives the inferior titles of earl and baron to the marquess of Lansdowne.

WYCOMBE (WEE), a parish in Buckinghamshire, 2½ m. NW by W of High Wycombe. Area 6,840 acres. Pop. in 1831, 1,901; in 1851, 2,000.

YAKUNOSUNA, an island of Japan, 24 m. W of the island of Tanegasima, and 42 m. S of the island of Kiu-siu. It is 24 m. in length, and 9 in breadth, and according to Krusenstern, its N extremity is in N lat. 30° 43' 30", and E long. 131° 7' 45". It is perfectly flat, and so low that the trees with which it is covered scarcely seem to rise above the level of the water. On the E and W sides are two large bays. This island is frequented by the inhabitants of Nagasaki, who come hither in quest of wood.

YAKURGA, a village of Russia in Europe, in the gov. of Vologda, and district of Veliki-Oustoug, on the Dvina. It has extensive salt-works.

YAKUSI, a town of Japan, in the island of Nifon, and prov. of Dena, 185 m. N of Magani.

YAKUTSK, an extensive district of Asiatic Russia, originally forming one of the four provinces into which the gov. of Irkutsk was divided, but now composing a separate government. It extends N from the parallel of 48° 30', or the boundary of Irkutsk-proper and of Nertzhinsk, as far as the Frozen ocean. On the E it is bounded by the prov. of Okhotsk; on the S by China; on the SW by the gov. of Irkutsk; and on the W by that of Yeniseisk. From E to W it has a length of nearly 1,700 m.; from S to N it stretches above 1,000 m. The Lena traverses it through its whole extent from N to S. The other rivers are the Olonek, the Indeghirka, and the Kolyma. The sea-coast is low; but the surface rises towards the S and E, where numerous ridges from the Yablannoi mountains intersect the country. Timber attains a large size in the S; in the N the forests are chiefly of stunted pine and birch. The geological formation of the country seems to consist for the most part of carboniferous and other palæozoic deposits, which in the ridges of the Stanovoi hills, and near the coasts, are broken up and dislocated by the intrusion of rocks of igneous origin. Through nearly the whole of this vast

country, the severity of the climate renders it impossible to raise grain to advantage; and if a crop of rye is sown, its ripening is extremely uncertain. In the neighbourhood of the town of Yakutsk, the ground, even in June, is frozen 3 ft. deep. The chief employment of the inhabitants, therefore, consists in hunting; and this region was at one time so abundant in valuable furs, as to be called the Peru of Siberia. The sables, however, being now nearly extirpated, the produce of the chase has greatly declined in value. The inhabitants of this dreary region bear the name of Yakuts or Jakuti. They are supposed to have been originally a Tartar race, and to have occupied the countries on the Angara and Upper Lena; but, forced to yield to the violence of the Mongols and Burians, they have taken shelter in the frozen solitudes of the Lower Lena, from the Witim downwards. The territory occupied by them may be reckoned to extend 18° from N to S, and nearly 50° from E to W. The pop., however, of this region, does not bear any proportion to this extent. The number of males paying tribute in 1796 amounted to 34,979; and this, it was supposed, might be about the third of the entire number of both sexes. The Y. who inhabit the southern districts are tolerably rich; they possess the usual size, activity, and vigour; but those farther to the N form a stunted race, indolent and wretched. M. Ermann says that their countenance and language fully confirm the tradition of their descent from the Tartars. Their complexion is swarthy, and their hair black. "They are properly a pastoral people, whose chief riches consist in the number of their horses and horned cattle, on the produce of which they subsist almost entirely. But the abundance of fur-animals in their vast forests, and the profit which they can make by selling them to the Russians have turned a large part of their attention to the chase, of which they are often passionately fond, and which they follow with unwearied ardour and admirable skill. Accustomed from infancy to the privations incidental to their severe climate, they disregard hardships of every kind. They appear absolutely insensible to cold, and their endurance of hunger is such as to be almost incredible. Their food consists of sour cows' milk, and mares' milk, and of beef, and horse-flesh. They boil their meat, but never roast or bake it, and bread is unknown among them. Fat is their greatest delicacy. They eat it in every possible shape; raw, melted, fresh, or spoilt. In general they regard quantity, more than quality, in their food. They grate the inner bark of the larch, and sometimes of the fir, and mix it with fish, a little meal and milk, or by preference with fat, and make it into a sort of broth, which they consume in large quantities. They prepare from cows' milk what is called the Jakutian butter. It is more like a kind of cheese, or of curd, and has a sourish taste; it is not very rich, and is a very good article of food eaten alone. Both men and women are passionately fond of smoking tobacco. They prefer the most pungent kinds, especially the Circassian. They swallow the smoke, and it produces a kind of stupefaction which nearly resembles intoxication; and if provoked when in this state the consequences are dangerous. Brandy is also used, though the long inland carriage renders it extremely dear. The Russian traders know how to avail themselves of these tastes in their traffic for furs." They are one of the most superstitious races in existence. They reckon not less than thirteen tribes of aerial beings, to whom they pay homage. Their shamans, or magical impostors, enjoy unbounded influence.

YAKUTSK, the capital of the above government,

is situated on the W bank of the Lena, on a plain surrounded by mountains, which enclose it at the distance of 13 or 12 m., and only elevated 270 ft. above sea-level. It displays a few wooden houses, and a number of huts plastered over with cow-dung, and windowed with ice; and contains about 7,000 inhabitants, chiefly Yakuts, whose language is spoken by all the Russian merchants here. Notwithstanding its desolate situation, Y. is a place of some trade. It forms the emporium of all the furs which are collected in the extensive regions to the north; and it imports the Russian and Asiatic commodities which are given in exchange. It forms also a species of *entrepot* for the Russian trade with Kamtschatka and the western coast of America. The cold is excessive; and during winter the inhabitants are almost entirely confined to their houses, the day-light not continuing above a few hours. This season is consumed by them almost entirely in sleeping and drinking. It is hardly conceivable how the love of gain could ever have induced men, acquainted with a milder climate, to take up their abode in this, the coldest spot on the earth's surface. The earth is always frozen, the summer's thaw never reaching below 3 ft. from the surface; and MM. Ermann and Middendorff are disposed to conclude that the subterranean ice or frozen subsoil has a depth of 600 ft. Astounding as this statement may be, yet it seems to be confirmed by all that we know of the observed temp. of Y. For two months in every year, it has a medium temp. of -40° : in January, the therm. has been known to descend to -72° , or 18° below the degree of cold experienced by Captain Ross in his last expedition. Yet the inhabitants of Y., favoured by a warm, though short summer, reap wheat and barley, and cultivate successfully potatoes and a variety of hardy vegetables.

YALA (CAFE), a headland of the island of Candia, on the E coast, to the S of the island of Carube, in N lat. $35^{\circ} 3'$, and E long. $26^{\circ} 15' 10''$.

YANA-KOURGAN, a small town of Independent Tartary, in the state of Kokan, and 72 m. from Namghan. It has a fort, with a garrison of 200 men.

YA-NANG-HEEN, a village of Barmah, near the l. bank of the Irawadi, 34 m. N by W of Patanago, celebrated for its wells of mineral oil or petroleum. These wells are scattered irregularly over a tract of rugged arid downs and hillocks about 3 m. from the river, to the number, it is said, of about 200; and 4 or 5 m. to the NE there are about 500 more. In making a well, the hill is cut down, so as to form a square table of 14 or 20 ft. for the crown of the well, and from this table a road is formed by scraping away an inclined plane for the drawers to descend, in raising the excavated earth from the well, and subsequently the oil. The shaft is sunk of a square form, and lined with cassia-wood stave. The soil or strata to be pierced is, first, a light sandy loam intermixed with fragments of quartz, siler, &c. Secondly, a friable sandstone easily wrought, with thin horizontal strata of a concrete of martial ore, talc, and indurated argil, at from 10 or 15 ft. from the surface, and also from each other, as there are several of these veins in the great body of freestone. Thirdly, at 20 cubits, more or less, from the surface, and immediately below the freestone, a pale blue argillaceous earth appears, impregnated with the petroleum, and smelling strongly of it. This is very difficult to work, and grows harder as they get deeper, ending in schist and slate, such as is found covering veins of coal in Europe. Below this schist, at the depth of 130 cubits, is coal. The oil is drawn pure from the wells in the liquid state; but in the cold season it congeals in the open air, and loses something of its fluidity. The oil is of a dingy green, and odorous: it is used for lamps, and, boiled with a little dammer (a resin of the country) for painting the timbers of houses, and the bottoms of boats, &c. which it preserves from decay and vermin. The average produce of each well per diem, in 1796 was 500 viss, or 1,825 lbs. avoird. Each well was worked by four men, and their wages regulated by the average produce of six days' labour. Mr. Cox estimated on the best data at which he could arrive, that there were 520 wells registered by government, and the gross produce of the whole per annum, was 56,940 viss, or 92,781 tons, 1,560 lbs., or 412,360 hogheads; worth at the wells, at one and a quarter ticals per hundred viss, 711,750 ticals, or 889,687½ sicca rupees. From the wells the oil is carried in small jars, by coolies or on carts, to the river; where it is delivered to the merchant exporter. There were between 70 and 80 boats, average burthen sixty tons each, loading oil at the several wharfs, and others constantly coming and going while he was there. A number of boats and men also find constant employment in providing pots, &c. for the oil.

YANAON, or **YANAN**, a French settlement and village of Hindostan, in the presidency of Madras, district and 80 m. SE of Rajamundry, near the bifurcation of the Godavery and Coringa, and about

9 m. above the embouchure of the former river. Pop. 6,881. The territory connected with the French factory comprises an area of 8,147 acres.

NNW of Mecca, in a vast plain, on the shore of the Red sea, in N lat. 24° 7' 6", and E long. 37° 32' 15". Pop. 3,000. It has a good and commodious port, but difficult of access on account of the number of rocks which obstruct its entrance. The town is enclosed by walls, irregular in outline, but averaging a diameter of 746 yds. from E to W, and of about 426 yds. from N to S. The wall is 9 ft. in height, but does not exceed 15 in. in thickness. The fortifications consist chiefly of towers, one of which is strongly fortified with artillery. The central part of the town, which is on the harbour, is surrounded by a second enclosure of walls, of greater height, flanked with towers. The houses are low and flat-roofed. Yanbo-el-Bahr is the port of Medina, and carries on an active trade. The climate is excessively warm and insalubrious, and the environs present the aspect of an arid desert.

YANBO-EL-NAKHL [i. e., 'Yanbo of the Palm-trees'], a town of Arabia, in the Hedjaz, about 80 m. ENE of Yanbo-el-Bahr, in the midst of mountains. It is well supplied with water, and possesses fine gardens and numerous palm-trees. The inhabitants are *sherifs*, or descendants of the prophet, and are noted warriors.

YANG-TSZE-KEANG [*i. e.* 'son of the ocean'], called also Keang or Ta-keang [*i. e.* river, or great river], and often by Europeans Blue river, a river of China, one of the greatest in Asia, and scarcely inferior to any in America, formed by the confluence of the Kin-sha-keang and Ya-lung-keang, on the confines of the provinces of Sze-chuen and Yun-nan. Taking first a S direction, it runs along the confines of the above-named provinces, nearly in a line parallel with the meridian of 102° E, and then describes a curve to the E. On reaching 102° 42' E long., it enters the prov. of Sze-chuen, and directs its course first NE, and afterwards N, skirting for some distance the prov. of Kwei-chu. In N lat. 28° 20', it resumes a NE direction; passes Ma-hu-fu, the first large city on its banks, and soon after, at the confluence of the Yang-keang, a large river, Su-chu. In N lat. 29° 48', and E long. 106° 40', near Chung-king-fu, it receives the Kei-ho-tung-keang or Kea-ling-keang; and in its further course through Sze-chuen, passes many important cities, of which the principal, in addition to those already named, is Kwei-chu. On entering the prov. of Huh-pih, it runs SE till it reaches Tung-ling lake, with which it communicates, when it abruptly bends NE, a direction which it retains to the confluence of the Han-keang, near Han-yung-fu and Wu-chang-fu, in N lat. 30° 40' and E long. 114° 10'. Then sweeping SE, it passes Wang-chu-fu, and through the N extremity of the prov. of Keang-si, in which it receives the outlet of the Po-yang lake. Again taking a NE direction, it traverses the prov. of Gan-hwuy, it waters Gan-king-fu, Che-chu-fu, and Tae-ping-fu, and enters that of Keang-su. Passing Keang-ning-fu or Nan-king, it directs its course ENE, crossing near Chin-keang-fu, the En-ho or Imperial canal, and, afterwards bending SE, enters the Tong-hai or Eastern sea, by an estuary about 60 m. wide, between the parallels of 31° and 32° N. It has a total course of 1,980 m. or to the source of the Ku-sha-keang 3,000 m. Its principal affluents are, on the r., the Ou-keang, the outlet of Lake Tung-ling, and the outlet of Lake Po-yang; and on the l., the Men-keang, Kea-ling-keang, Han-keang, and the outlets of Lakes Tseao and Kao-Yiou. The mountains of Pe-ling on the N, and those of Nan-king on the S, form, to a great extent, the basin of this river, which reaches on the W to the E coast of the great central plateau of Asia. It traverses a mountainous region in the upper part of its course, but towards the E it flows through vast plains of great fertility. The action of the tide reaches to Keon-keang, 450 m. from the sea, and vessels of large size can ascend to Lake Tung-ling, 300 m. higher. The Yang-tsze-keang is broad, deep, and abounding with fish. It is 21 m. wide above the island of Tsung-ming, at its mouth, and throughout a great part of its course is not less than 1½ m. in width. It forms numerous islands, on which reeds grow in great quantities, and being used for fuel, prove a useful production to the inhabitants of the adjacent banks.

YARKAND, **YARKHANG**, **YERKIANG**, or **YARKEND**, a city of Turkestan, in the Chinese government of Ele, in N lat. $40^{\circ} 10'$, 120 m. SE of Cashgar, on the route to Cashmere, and on a river of the same name. It is surrounded by stone walls about 3 m. in circuit; but the suburbs extend greatly beyond the walls. The houses are chiefly built of sun-dried bricks. There are numerous mosques, and 10 colleges within the walls; and several public buildings which also afford barracks for the Chinese garrison of 7,000. The population is variously estimated at from 40,000 to 200,000. An active trade is carried on here in horses, silk, and wool, and the customs are said to yield 45,000 dollars annually. This city was reunited to the Chinese empire in 1757. It is governed by the Mahommedan and the Chinese functionaries, who are replaced by new officers every

third year. The vicinity is fertile, yielding wheat, barley, rice, fruits, and silk, and extensive pasturage.—The river of Y. rises on the N flank of the Karakoram mountains, flows NNW to the city of Y., whence it flows 300 m. to its junction with the Cashgar, the united streams forming the Taryn, which runs E into the Lob-nor. The yam or jade-stone, a kind of jasper highly esteemed by the Chinese, is found chiefly in the bed of this river; and forms an important article of export.

YARM, or **YARUM**, a market-town and parish in the N. R. of Yorkshire, $\frac{1}{2}$ m. NNW of York, on the river Tees, here crossed by a bridge, and 1 m. S of the Stockton and Darlington railway. Area 1,135 acres. Pop. in 1831, 1,636; in 1851, 1,647. The town has frequently suffered from inundation of the Tees.

YARMOUTH, a borough, parish, and sea-port, in the hund. of Flegg, co. of Norfolk, at the mouth of the Yare, $\frac{1}{4}$ m. E of Norwich, with which it is now connected by railway. Area of the parish 1,510 acres. Pop. in 1801, 14,845; in 1831, 21,115; in 1851, 26,880. The borough, till 1832, consisted of the p. and hamlet of South-Town, or Little Y., in the parish of Gorleston, Suffolk, opposite Great Y., being divided from it by the Yare, but connected by a drawbridge nearly opposite the centre of the town, and about $\frac{1}{2}$ m. from the mouth of the river. There is also an iron suspension-bridge over the North river. By the Reform act, the whole p. of Gorleston, including the hamlet of Gorleston, continuous with Little Y., was included within the borough boundaries. Great Y., the chief and ancient part of the town, stands on a narrow peninsular slip, running along the coast between the Yare on the W, and the sea on the E, upwards of 1 m. in length, and $\frac{1}{2}$ m. in breadth. It is irregularly built, and contains four principal and numerous narrow streets. A wall, begun in the reign of Edward I., formerly extended on the E, N, and S sides, 6,720 ft. in aggregate length, with 10 gates and 16 towers. It is composed of flint, pebbles, and shingle, so strongly cemented together, that its demolition, in the course of improvement, is even still attended with no little labour. The suburb of Little Y. or South-Town, consists chiefly of neat and substantial private residences, extending along the W side of the high road leading from the bridge to Gorleston. The space between that road and the river opposite to Great Y., is occupied by docks, timber-wharfs, building-yards, &c. The village or town of Gorleston lies more to the S, near the entrance to the harbour. The guildhall is an ancient edifice. The borough-jail and house-of-correction is situated in the densest part of the town. The royal barracks on the beach are capable of accommodating 1,000 men. On the sands SE of the town, is a column 144 ft. high, erected to the memory of Nelson.—The harbour was formed with great difficulty and labour by the erection of piers and a jetty, and is kept in a state of repair at a very heavy cost. A N pier was first constructed with much labour, but this has been replaced by another, chiefly for the convenience of mooring ships in harbour. The S pier is at the mouth of the Yare. A continuation of it is carried up the river in a fine curve, forming an extensive

and excellent wharf. This pier is 1,020 ft. long and 80 ft. broad. In addition to the piers, a jetty was constructed on the beach some way to the N in 1808; this extends into the sea upwards of 450 ft. and has a platform 21 ft. in width. This harbour affords a secure shelter to shipping; and vessels seek protection in it against easterly storms. The coast is shallow, full of sand-banks, and dangerous. Y. is the principal port, except London, for the English trade to the north of Europe; and besides fishing smacks, upwards of 500 vessels belong to the port. An extensive inland trade is conducted in the exchange of agricultural produce for coals, other heavy goods, and the produce of the continent and the colonies. A direct and extensive import timber trade is conducted with the Baltic; an important export trade in fish, is conducted with the West Indies and various foreign countries, particularly those bordering on the Mediterranean; and a regular communication is kept up interiorly with Norwich, and exteriorly with the chief ports of the east coast of England. The herring and mackerel fisheries are the chief source of trade, and are, in general, remarkably productive. In one year 15,000 barrels have been cured here for home consumption, and 70,000 for exportation. In 1853, 1,577 vessels = 133,249 tons, and 183 steam vessels = 25,358 tons, entered this port coastwise; and the tonnage belonging to the port was 328 vessels under 50 tons, and 289 vessels above 50 tons, making a total tonnage of 42,323 tons. Ship-building, and the various trades connected with it, are somewhat extensively conducted. A manufactory of crapes and other silk goods, employs about 500 persons.

YARMOUTH, a parish, and a disfranchised borough, and market-town, in the Is^e of Wight, 10 m. W of Newport, at the mouth of the river Yar. Pop. in 1801, 343; in 1831, 586; in 1851, 572. It regularly returned two members till the passing of the Reform act, when it was disfranchised. The town is situated on the slope of a hill, and formerly occupied more ground than it now does. It is well-built. The trade is now insignificant, and consists principally in the exportation of a fine white sand for the use of glass-makers, and in the importation of coals from Sunderland, and timber.

YARMOUTH, a township* of Upper Canada, in the London district, bounded on the S by Lake Erie, and separated by Catfish creek from the township of Malahide, and from that of Southwold by Kettle creek. YAROSLAV, or **JAROSLAV**, an extensive government in the interior of European Russia; bounded on the N by Vologda; on the E by Kostroma; on the S by Vladimir; and on the W by Tver and Novogrod, and lying between the parallels of 56° 44' and 58° 57' N lat. Its territorial extent is 29,166 sq. versts. Its population was returned in 1846 at 1,008,100. The surface chiefly consists of large undulating plains, traversed by the Volga, the Schekana, the Mologa, the Kotorosta, the Sogojia, the Sita, the Pontna, the Vexa, the Kostroma, and several smaller rivers. The lakes are also numerous. The principal of them are Lake Rostof or Nero, the great Yagorskoie, the Kharlam, the Somskoie, and the Yarobol. The soil is sand, clay, or black mould; but in many places it is marshy. The climate is not particularly severe; but agriculture is in so backward a state that it is often necessary to import corn from the neighbouring provinces. Of a total area of 3,040,349 sq. *desiatines*, 1,065,881 were returned as arable in 1825. The inhabitants rear and export cattle: they trade also in wood to great extent, and have established some manufactures and fisheries. The live stock in 1825 was returned at 366,046 horses, 369,917 horned cattle, and 560,980 sheep. This government is divided into 10 circles, but does not comprehend the level and very slightly cultivated tract called the steppes of Yaroslav. It contains 11 towns, and 7,977 villages.

YAROSLAV, the capital of the above government, is situated on the r. bank of the Volga, 160 m. NNE of Moscow, and 360 ESE of St. Petersburg. Though built almost entirely of wooden houses, and with narrow irregular streets, it is a place of considerable importance. Its manufactures of linen, silk, and leather, are on a large scale; and paper, soap, ropes, brass, iron and tin wares, white lead, and oil are also manufactured here. There is a noted bell foundry; and, by means of the Volga, a traffic of some extent is conducted. The pop. in 1846 was about 25,000. It is the see of an archbishop, and is said to possess 44 churches. An academy, founded by Prince Demidoff, for the education of youths of genteel family, a high school for the education of those of less elevated birth, and a theological seminary on a large scale exist here. Peter the Great founded the manufactures of this place; but they were brought to perfection chiefly by the fostering hand of John Ernest, duke of Courland.

YELL, a county in the NW part of the state of Arkansas, U. S., comprising an area of 1,027 sq. m., drained by Petite-Jean, and other affluents of the Arkansas, by which it is bordered on the NE. The surface is diversified, and possesses considerable fertility. Pop. in 1850, 3,341. Its capital is Danville.—Also a central county of the state of Iowa, comprising an area of 615 sq. m., drained by Des Moines river and its branches. It has a finely diversified surface, and is generally fertile.

YELL, one of the Shetland islands, the second of the group in point of size, and the most northerly in situation, excepting Unst. Yell sound, which is studded with isles and islets, separates Yell from the N part of Mainland. Its length from N to S is 19 m.; its greatest breadth is 9½ m.; and its superficial extent is about 94 sq. m. The tides on both sides of the island are very impetuous; and both on Yell and Blomel sounds, where they meet with obstructions, and often run at the rate of 9 or 10 m., they for continuous hours defy boat-navigation, and toss the sea, even during a calm, into foam and tumult. The surface of the island presents a heavy and cheerless aspect. Two nearly parallel ridges of gneiss rocks, of almost uniform outline, and only from 200 to 400 ft., traverse it nearly from end to end; sloping gradually towards the shores, and, in some places, connected by transverse ridges, running from E to W. Almost the whole soil is moss; occasionally, yet seldom, mixed with clay or sand. Agriculture is in a miserable condition. Only about 4,000 acres are enclosed; probably not above 1,000 are at any time under culture; and the spade is the only implement of tillage. The island, however, is an excellent fishing-station. Pop. in 1835, 2,693; in 1851, 3,397.—Y. is ecclesiastically distributed into three parishes, North, Mid, and South. North Y. is united to Fetlar; which see. Mid Y. and South Y. form one ministry, or united parish, comprehending also the island of Samphray, lying 1½ m. SSW of the S extremity of Y., and measuring about 860 acres in area, and the island of Bigga, lying 1½ m. NW of the former, and measuring about 540 acres in area; exclusive of these, it has a superficial extent of 36,000 acres, and an extreme length and breadth of respectively 13 and 6½ m. Pop. in 1801, of North Y. and Fetlar, 1,389; in 1831, 1,812; in 1851, 1,666.

YELTES, a river of Spain, in the prov. of Salamanca, which has its source to the N of Pina-de-Francia; receives the Huebra, near Gicla, and after a course, in a generally NW direction of about 60 m., joins the Duero, on the l. bank. The Y. is in summer every where fordable, but in winter swells to a large stream.

YELTON, a salt lake of Russia in Europe, in the gov. of Saratov, at the S extremity of the district of Kamishin, and 75 m. from the l. bank of the Volga. It is nearly circular in form, and is about 9 m. in diameter. It receives several small rivers, of which the principal is the Khirikhaza-Sclenai, which flows from the NW. It is of little depth, and its waters, when evaporated by the sun, become edged with incrustations of salt several inches in thickness. The quantity of salt thus obtained amounts to 100,000 tons annually, and employs about 10,000 men in its preparation and conveyance to Saratov.

YEMBO, or **YAMBO**, a town of Arabia, in Nedjaz, 130 m. SW of Medinah, on the N side of a capacious inlet of the Red sea. It is governed by a Turkish effendi, and forms the port of Medinah. The entrance of the harbour lies in N lat. 34° 4', E long. 38° 6'. It affords excellent water, and sheep, bullocks, fowls, and fruit. It has a pop. of about 2,000. Lieut. Burton, who recently travelled from Y. to Medinah, by the land-route, computes, that from Y. to Muzahhal the distance is 16 m.; from Muzahhal to El-Hamra, 48 m.; from El-Hamra to Suwaykeh, 46 m.; from Suwaykeh to Medinah, 20 m.

YEMEN, a district of Arabia, comprising the SW angle of the peninsula, and bounded on the N by the Hedjaz and Nedjid; and on the E by Hadramaut. It once formed the kingdom of Sabu; but the prin-

cipal political chief now acknowledged in it is the imam of Sana. A strip of comparatively level ground, varying in width from 10 to 50 m. runs between the sea-shore and the interior table-land, which rises abruptly from the plain, and attains an elevation, it is supposed, of at least 8,000 ft. in the interior. The sheiks or sultans of Aden, Loheia, and Abu-arish, had independent sway in portions of the Tahema, and to some distance inland. In the Jebel, or highlands, nearly every chief maintains a virtual independence, although they will occasionally bear arms, for payment, in the service of the imam of Sana. Some of them appear to have formed a kind of confederacy for mutual defence, known as the Hashed-ul-Bekil. Ibrahim Pasha bestowed the province of Hais on the sheikh who had governed Taas for the imam of Sana; and did much to foment the feuds between the petty chieftains of this quarter of Arabia, in the hope of profiting by their dissensions; but the people of Y. are not, generally speaking, attached to military life. Wheat, maize, coffee, and *khat* are the productions chiefly cultivated throughout Y. The latter is the *Celastrus* or *Catha edulis*. Its soft twigs and tender leaves are universally used as a restorative from fatigue, and produce an agreeable soothing excitement, which, when persevered in, becomes a slight intoxication. The Arabs of Y. sit chewing it, and talking whole nights together. The finer sorts are, however, expensive. The use of *kat*, which is said not to leave any disagreeable consequences, is older than that of coffee, and that cultivated on Mount Sabir is the best, and a source of great wealth to the inhabitants, as the trade in this herb is very considerable. The trees are not stripped till four years old, and their first produce is of an inferior quality. It furnishes the best produce in the sixth year. The wild *kat* tree also furnishes a coarse and very intoxicating produce. Excellent grapes, apples, and medlars are raised. The pop. is in part Bedouin and Somali. The natives of Mount Sabir, the most elevated portion of the inland plateau, are of superior physical development. The women of this district are said to be remarkably beautiful, with Italian features, fair complexion, and free graceful figures. The principal merchants are Hadramy, or natives of Hadramaut. See article ARABIA.

YEMGUM, or **JEMGUM**, a market-town and bail. of Hanover, in the gov. and 17 m. SSW of Aurich, on the l. bank of the Ems, which here forms a small port. Pop. 1,196. In 1568, Prince Louis of Nassau, brother of the Prince of Orange, was defeated with great loss near this town.

YEMHATTI, a town of Hindostan, in the presidency of Madras, 92 m. NE by N of Coimbatour, in N lat. 12° 10', and E long. 77° 40'.

YENIBAZAR. See **NOVIBAZAR**.

YENIDJA, a lake of Turkey in Europe, in Rumania, in the sanj. of Salonica, and to the S of Yem-dja-Vardar. It is 3 m. in length from NE to SW, and 3 in breadth. It receives several rivers, the principal of which is the Vistriza, and discharges itself by the Caraismak into the gulf of Salonica. Its waters are saline, and in the incrustation of salt

caused by evaporation on its banks, affords an important article of commerce. It is destitute of fish.

YENIDJA-CARASU, a town of Turkey in Europe, in Rumelia, in the sanj. and 108 m. WNW of Gallipoli, and 30 m. ENE of La Cavale, in the midst of a fine plain, and near Lake Lafri, which discharges itself into the gulf of Lagos. Pop., chiefly Turks, 2,500. It has a mosque, baths, a bazaar, and several khans. The trade consists chiefly in tobacco, the produce of the locality, and noted as the finest in Turkey.—About 6 m. to the S of this town, on the banks of the sea, are the ruins of the ancient *Abdera*.

YENIDJA-KIZILAGHADJ, a town of Turkey in Europe, in Rumelia, in the sanj. and 21 m. NE of Tshirmen, and 38 m. N of Adrianople, in a plain, on the l. bank of the Tunja, which is here crossed by a bridge. Pop. 2,500. It has a mosque, a bazaar, a bath, and a khan.

YENIDJA-VARDAR, a town of Turkey in Europe, in the sanj. and 29 m. WNW of Salonica, 17 m. S of Mogrena, and a little to the N of a lake of the same name. Pop. about 6,000. It is open, and contains numerous mosques, Greek churches, khans, baths, and shops. It has manufactories of woollen fabrics, and carries on an active trade in tobacco, the produce of the locality, which is reckoned the best in Macedonia. It was conquered by Ornosbeg in 768, and has several foundations originated by him and his son. It contains the tomb of the former. A little to the S of this town are the ruins of the ancient *Pella*, the birthplace of Alexander the Great, and place of sepulture of Euripides.

YENIGUEDEL WELLS, a watering station of Morocco, in the prov. of Draha, to the N of Mimcina, visited by Caillé in 1828. They afford abundant supplies of excellent water.

YENIKALEH, **JENIKALAH**, or **ENIKALE**, a town of Russia, in the Crimea, on a cape $5\frac{1}{2}$ m. to the E of Kertch, at the N entrance of the strait of Kertch, leading from the Black sea into the sea of Azof, in N lat. $45^{\circ} 21'$, E long. $36^{\circ} 38'$. It is a town of about 1,500 inhabitants, with a fortress on the highest point of the promontory. The town consists of two parts, one of which lies close to the water's edge, and is commanded by the high land above it. In the suburb stands the church, a handsome building in the Byzantine style. The other part of the town chiefly consists of a quadrangular fort, each side of which is about a $\frac{1}{2}$ m. in length. Within the walls of this quarter are the hospital, barracks, stores, and governor's house. The chief employment of the inhabitants is derived from the fisheries in the sea of Azof. A sandbank stretching from the NE extremity of the peninsula of Taman runs towards Y., and contracts the strait to the breadth of $1\frac{1}{2}$ m. just before it opens into the sea of Azof, and there is not more than 13 ft. water in the channel opposite Y. On the bank, which is full of salt marshes, and from 2 to 8 m. broad in some places, there is a strong battery crossing fire with the principal battery on the side of Y. This place was taken by the allies in 1855, and is now held by them.

YENI-KENI, a town of Turkey in Europe, in Rumelia, in the sanj. of Visa, 9 m. NE of Constantinople, on a strait of the same name.—Also a village of the beglik and 21 m. SSE of Sereas, and 6 m. YENI-SAGHRA, or **YENI-SARA**, a town of Turkey in Europe, in Rumelia, in the sanj. and 42 m. N of Tshirmen, and 63 m. NNW of Adrianople, in a fertile plain on the r. bank of the Tunja.

YENISEI, a river of Asia, which has its source in the NW part of the Chinese empire in the country of the Khalkas. It issues under the name of Khongem, from Lake Uru, a small lake separated by a ramification of the Tangnou mountains from Lake Koussongol; runs first in a westerly direction, taking, after the confluence of the Kamsara, the name of Outoukem. On reaching the N between the Saianek and Kem-Kentsik mountains, it bends N to the Little Altai chain, and thence assumes the appellation which it retains throughout the remainder of its course. It traverses longitudinally the gov. to which it gives its name, and falls into the Arctic ocean by a spacious estuary, frequently distinguished as the gulf of Yenisei. This immense river, which intersects Siberia in its entire breadth, has a total course of 1,950 m., of which 360 m. only are within the confines of the Chinese empire. It has numerous affluents, especially on the r., on which it receives the Tuba, Kan, Verkhniai-Tunguska, or Angara, the outlet of Lake Baikal, the Pit, the Podkamenna-Tunguska, Bakta, Nijnai-Tunguska and Kurska. On the l. it receives the Kemt-chik, Abkan or Abakan, Sim, Elagui, and Turuka. Of all these rivers, the most important as the outlet of Lake Baikal, is the Verkhniai-Tunguska, or Upper Tunguska. The area of the basin of the Y., comprising that of Lake Baikal, and thus forming the greatest in Russia, is 2,100 m. in length, from the sources of the Orkhon in the Khangai mountains, to the Frozen ocean, and 1,200 in breadth from the source of the Angara to that of the Akhan in the mountains of Tiletuk. These mountains, and the Kusnetzk range, a continuation of the former, form a portion of the dividing line between the basin of the Y. and that of the Oby on the W, while the mountains of Baikal, and a long chain still but little known, form the line of separation from the basin of the Lena. Towards the S the banks of the Y., generally well-peopled, are studded with villages and towns, amongst the latter of which are to be noted Minosinsk, Krasnolarsk and Yeniseisk. Towards the N, Touroukhansk under the 66th parallel, is the last town on the Y., which here has a depth of 8 fathoms. The last village near its mouth is in $70^{\circ} 30'$ N lat. In some parts this river attains a considerable breadth, and a little above the confluence of the Podkamenna-Tunguska expands to the dimensions of a lake. Its waters abound with fish.

YENISEI (GULF OF THE), or Gulf of the Seventy Islands, a gulf formed by the Arctic ocean, on the N coast of Russia in Asia, in the gov. of Yeniseisk, at the mouth of the river from which it takes its name, and of which it may properly be considered the estuary. It is 240 m. in length from N to S, 54 m. in extreme breadth, and 30 m. wide at the entrance, which is in N lat. $72^{\circ} 30'$, and E long. $84^{\circ} 20'$, and opposite to which is the island of Koskin. It derives the second of its names from the number of its islands. It does not open to navigation till the month of June.

YENISEISK, a government, district, and town

of Russia in Asia, situated in the western, but politically belonging to the eastern division of Siberia, lying between 50° 20' and 78° 25' N lat., and between 76° 50' and 111° 40' E long., bounded on the N by the Arctic ocean; on the E by the gov. of Irkutsk and the prov. of Yakutsk, from which it is partly divided by the Anabara; on the S by the Chinese empire, from which it is separated by the Little Altai chain and the Sajansk mountains; and on the W by the gov. of Tomsk and Tobolsk, comprising an area 1,980 m. in length from N to S, and 840 m. in breadth from E to W, and a total superficies of 1,235,000 sq. m. The coast of the gov. of Y. forms on the NE Cape Sievero-Vostochni, the most northerly point of the old continent, and presents several considerable indentations, of which the principal are the gulfs of Khatanga, Taimur, Yenisei, Varentsov, Tedanski and Tasovska. This vast district is almost entirely comprised within the basin of the Arctic ocean, and nearly all its waters are collected by the Yenisei. The principal affluents of that river in this gov. are the Verkhnaia-Tunguska, Podkamennsia-Tunguska, Bakta, Nijnaia-Tunguska and Kussika, on the r., and on the l. the Abakan, Sim, Elagui, and Turuka. In the NE are the Piasina and Katanaka, which discharge themselves into the ocean; in the NW the Tas falls into Tasovsk bay; and on the W the Vakh, Tim, Ket, and Tohelun, all affluents of the Obi. In the N part are numerous lakes, the principal of which is Piasina. The E part is covered with hills of little elevation, while in the S are numerous ranges, ramifying from the great mountain chain, which run along the S and SW confines of the gov. This portion of the gov. is moderate in temperature, and is in some parts well-wooded. It is well-peopled, and contains several towns and villages built by the Russians and Cossacks. Culinary salt and iron are among the most important productions of this gov. About 30,000 poods of iron, and 130,000 poods of salt are annually made. Its aboriginal inhabitants consist of several tribes, amongst whom may be mentioned the Arintsis, Kamasintsis, Katchintsis, Sagaitsis, Koibalits, and Beltiris. The N portion, which is chiefly desert, is inhabited by Tunguses, Tchlapogirs, Yakuts, Samoiedes, and Ostiaks. This gov. was formed in 1823 from the gov. of Tomsk, of which it comprises the greater portion. It is divided into 5 circles, viz., Atchinsk, Yeniseisk, Kansk, Krasnoiarak, and Mimosinsk. Krasnoiarak is the capital. The number of its inhabitants in 1831 did not exceed 173,898. In 1846 they were returned at 191,500. The yearly increase of pop. has been estimated at 1547; while that by convicts amounts to 8,500.—The district of Yeniseisk occupies the N part of the gov., and possesses an area 750 m. in length from E to W, and 120 m. in breadth from N to S. It presents extensive sterile plains, intersected by the Yenisei, the Tunguskas, and the Khatanga, and inhabited by the Tunguses, Yakuts, Samoiedes, Ostiaks and Tchlapogirs.—The town is 186 m. NNW of Krasnoiarak, and 900 m. E of Tobolsk, in a fertile plain, on the l. bank of the Yenisei, in N lat. 58° 27' 17", and E long. 100° 58' 30". Pop. in 1831, 6,000. It is about 4 m. in circumference, and contains four churches, two convents, a custom-house, a powder-magazine, and provision store. It possesses an active trade, and a periodical fair resorted to by merchants from all the surrounding regions. Cattle and poultry are extensively reared in the vicinity.

YENI-SHEHR, a town of Turkey in Asia, in Anatolia, in the sanj. of Khodavendkiar, 15 m. S of Isnik, and 80 m. ENE of Brusah, and a little to the NE of a lake of the same name, which is about 6 m.

long, and 2 m. in breadth.—Also a fort in the sanj. of Aidin, on a mountain, 12 m. E of Guzel-Hissar, and 90 m. SE of Smyrna, near the l. bank of the Gunjéré, a little above its confluence with the Blinck-Meindere. It occupies a portion of the ancient *Antiochia-ad-Meandrum*.—Also a village of the same sanj., 18 m. WNW of Guzel-Hissar, and a little to the W of Inek-Bazar. It occupies a portion of the site of the ancient *Magnesia-ad-Meandrum*.—Also a village in the sanj. and 76 m. WSW of Riga, on the Archipelago, a little to the SW of the channel of the Dardanelles, and a little to the NW of the site of the ancient Troy. It is inhabited chiefly by poor Greeks. On an adjacent hill was the acropolis or citadel of *Sigium*.

In the environs is a caravanserai. Y. is noted for the excellence of its bread. Cotton and rice are extensively cultivated in the vicinity.

YEZIDIS, or **Yezids**, a singular race of people in Russian Armenia, and scattered over the adjacent Turkish and Persian dominions. They speak a Kurdish dialect. Their principal stronghold is the Jebel-Sinjar, a solitary mountain, rising in the centre of the Mesopotamian desert, to the N of Mosul. Mr. Leyard states that the Y. recognise one Supreme Being; but that, as far as he could learn, they do not offer up any direct prayer or sacrifice to him. "The name of the Evil spirit is never mentioned; and any allusion to it by others so vexes and irritates them, that it is said they have put to death persons who have wantonly outraged their feelings by its use. So far is their dread of offending the Evil principle carried, that they carefully avoid every expression which may resemble in sound the name of Satan, or the Arabic word for 'accursed.' Thus, in speaking of a river, they will not say *ahat*, because it is too nearly connected with the first syllable in *ahém*, the devil; but substitute *nahv*. Nor, for the same reason, will they utter the word *ezken*, thread or fringe. *Nahal*, a horse-shoe, and *nahal-band*, a farrier, are forbidden words, because they approach to *lean*, a curse, and *medwa*, accursed. When they speak of the devil, they do so with reverence, as *Melak Tawus*, King Peacock, or *Melak-el-Kout*, the mighty angel." Baron Haxthausen regards them as a religious sect, not a distinct race, and probably of Kurdish descent. He imagines that they were originally a Gnostic sect, early expelled from the Christian church. They do not exhibit any traces of polytheism, and their religion is evidently not of Persia origin, for with them Satan is not a personification of the Evil principle. They believe Satan to be the chief of the angelic host, now suffering punishment for his rebellion against the Divine will; but still all-powerful, and to be restored hereafter to his high estate in the celestial hierarchy. He must be conciliated and revered, they say; for as he now has the means of doing evil to mankind, so will he hereafter have the power of rewarding them. Next to Satan, but inferior to him in might and wisdom, are seven archangels, who exercise a great influence over the world. They are Gabriel, Michael, Raphael, Azrael, Dedrail, Azraphel, and Shenkeel. Christ, according to them, was also a great angel, who had taken the form of man. He did not die on the cross, but ascended to heaven. They hold the Old Testament in great reverence, and believe in the cosmogony of Genesis, the deluge, and other events recorded in the Bible. They do not reject the New Testament nor the Koran; but consider them less entitled to their veneration. Still they always select passages from the latter for their tombs and holy places. Mohammed they look upon as a prophet, as they do Abraham and the patriarchs. They expect the second coming of Christ, as well as the re-appearance of Imam Mehdi, giving credence to the Mussulman fables relating to him. An inextinguishable national, as well as a religious enmity, exists between the Y. and the Persians.

It is drained by Cache and other creeks of Clear lake, and several other affluents of the Sacramento and Putah, and contains several lakes. Area 1,400 sq. m. Pop. in 1852, 1,307. Its capital is Freemont.

YOLOFS, **WOLOFS**, or **JOLOFS**, a people of Senegambia, who inhabit the vicinity of the French colony of Senegambia. Their state called Bour-ba-Ghiolof was formerly the most extensive in that region of Africa, and their chief still retains pre-eminence among the neighbouring coloured sovereigns. The Yolofo, in common with the Foulahs, inhabited, previous to the irruption of the Saracens, the fertile plains of Numidia and Mauritania, and when driven thence retired to the region they now occupy, which, although possessing little fertility, yield abundant returns to the exertions of industry. The forests abound with gum trees, but their produce is left chiefly to the Moors. Millet, cotton, and indigo abound in the fields. The Y. are large in stature, well-made, active, and hospitable, and their language is sonorous and easily understood. They manufacture cotton fabrics and articles in ivory. The gov., like that of the surrounding states, is feudal, but the king, owing chiefly to the number of his slaves, possesses despotic authority. Fetish paganism is more generally professed by the people than Mahomedanism.

YOLOMBO, a town of New Granada, in the dep. of Cundinamarca and prov. of Antioquia, 108 m. NNW of Santa-Fe-de-Bogota. Pop. 1,000.

YONKERS, a township and village of Westchester co., in the state of New York, U. S., 132 m. S of Albany, drained by Bronx river on the E, and bordered on the W by Saw-Mill or Nepperham river, an affluent of the Hudson, and intersected by the Hudson river railway. The village is noted for its salubrity, and is rapidly rising in importance. Pop. of township in 1840, 2,968; in 1850, 4,160.

YONNE, a river of France, which has its source in the dep. of the Nièvre, in the Belleperche marshes, at the foot of Mount Beuvron, in the arrond. and to the SE of Chateau-Chinon, and bearing the name of Belleperche to the Etang d'Yonne, 12 m. below its source. After traversing the departments of the Nièvre and Yonne, and a small part of

that of the Seine and Marne, and running in a NNW direction past Corbigny, Clamecy, Auxerre, Joigny, Villeneuve-le-Roi, Sens, and Pont-sur-Yonne, it throws itself into the Seine, on the l. bank, at Montereau-Fault-Yonne, after a total course of about 192 m., of which 80 m. are navigable. Its principal articles of transit are timber, charcoal, wine, grain, &c., for the Paris market.—Its chief affluents are the Moine, Fachin, Proye, Tourou, Houssiere, Menage, Bruit, Anguisson, Aussois, Beuvron, Ah-drie, Aire, Armançon, Vrin and Vannes. The canal de Nivernais forms a communication with the Loire, and that of Burgundy with the Saône.

YONNE, a department situated between 47° 22' and 48° 25' N lat., and between 2° 52' and 4° 20' E long., and bounded on the NW by the departments of the Seine-et-Marne; on the NE by that of the Aube; on the SE by the dep. of Côte d'Or; on the S by that of the Nièvre; and on the W by the dep. of the Loiret. It is 105 m. in length from NW to SE, and 60 m. in extreme breadth from NE to SW, comprising a total area of 2,700 sq. m. Pop. in 1801, 320,596; in 1821, 332,905; in 1831, 352,487; in 1841, 362,961; in 1846, 374,856. The surface of this dep. is diversified with hills, valleys and plains, but contains no lofty summits. The principal heights are those which on the SW separate the basin of the Loire from that of the Seine, and form a continuation of the mountains of Morvan. With the exception of the Vville, a small affluent of the Loire, all the waters of this dep. belong to the basin of the Seine. The principal river is the Yonne, which traverses the dep. from S to N, and receives on the r. the Cure, Armançon, and Vannes, and on the l. the Vrin, Loing, and its affluent the Ouanne. In the E part is Burgundy canal, which connects the Yonne and Saone. The soil is in some parts strong, but possesses great fertility, producing in great abundance, grain, wine, fruit, cider, hemp, and forage. The principal wines—which bear the general name of Lower Burgundy—are noted as the finest in the empire. Of the total number of arable hectares estimated at 709,268 in 1839, 88,228 were in wheat, 29,963 in maslin, 39,920 in rye, 38,476 in barley, 78,650 in oats, 531 in sarrasin, 6,822 in potatoes, 4,903 in legumes, 37,600 in the vine, 3,527 in gardens, 204 in beetroot, 2,468 in hemp, 29,154 in natural meadow, 42,699 in artificial meadow, 6,678 in orchards, and 162,299 in wood. Of these at the same period the estimated produce was 979,973 hectol. of wheat, 299,256 of maslin, 298,657 of rye, 355,319 of barley, 792,807 of oats, 4,882 of sarrasin, 584,576 of potatoes, 37,157 of legumes, 856,223 of wine, 32,234 of cider, 99,504 q. 1 m. of beetroot, 17,364 of hemp, 825,313 of grain, 688,370 q. m. of hay, 1,015,497 of forage, and 721,942 of timber. Of domestic animals the number was 28,163 horses, 3,787 mules, 11,876 asses, 139,218 head of cattle, 350,144 sheep, 35,489 pigs, and 3,172 goats. The principal mineral production is iron, the quality of which is esteemed equal to that of Berri. It yields also red and yellow ochre, granite, paving stone, marble, mill and lithographic stone, gun-flint, limestone, and pottery clay. The manufacturing industry of the dep. consists chiefly in iron, cloth, and some common woollen fabrics, blankets, cotton coverlets, casks, tiles, bottles, earthenware, and beetroot sugar. The principal exports are wine, grain, wood, charcoal, and staves. Fairs to the number of 406 are held in 89 com., lasting 421 days. In 1842 there were in the dep. 15 educational establishments, of which 6 were colleges at Auxerre, Avallon, Joigny, Noyers, Sens, and Tonnerre, 15 hospitals, and 71 other charitable institutions. The judicial divisions consist of 5 arrond., 35 cant., and 482 com. The

capital is Auxerre. This dep. was formed in 1790, from the NW part of the prov. of Burgundy, the SW of that of Champagne, and a small portion of the Ile-de-France. This district of France was the territory of the ancient *Senones*, a Gallic people who spread themselves even to the heart of Italy, and who were powerful at the period of the Roman invasion of Gaul. Sens is one of the most ancient, and was for some time one of the most important towns in France.

YONY, a town of Sherborough island, on the Sierra Leone coast, in Upper Guinea. The convention by which the king of Sherborough and his tributaries ceded their territories to the English, was ratified here on the 5th Oct. 1825.

YOOT-SIMA, a small island of Japan, in the sea of that name, to the NW of Cape Noto, on a peninsula of that name, in the island of Nifon, in N lat. 37° 51', and E long. 137° 34'. It is flat and woody, and generally well peopled.

YOPARE, a town of the N coast of New Guinea, in S lat. 0° 53' 26", and E long. 134° 6' 18".

YORI, or **YORA**, a river of Russia in Asia, in Georgia, which has its source in the Caucasus, in the N part of the Kakheti; runs first S, then SSE; and after a course of 210 m. joins the Abazani, on the r. bank, on the confines of Shirvan, and 18 m. NNE of Ganja. It flows through a mountainous country, in the upper part of its course, but afterwards traverses the steppe of Oupadar, and other sandy plains.

YORIBA. See **YARRIBA**.

YORIMAN, a numerous Indian tribe of Brazil, who inhabit the district to the N of the Hyapura.

YORK, a city, and ainsty or county in itself, and the capital of Yorkshire, is situated near the centre of the shire, at the point where the three ridings meet; at the confluence of the tidal rivers Ouse and Foss, in N lat. 53° 48', and W long. 4° 19'; at a mean alt. above the sea of 44 ft. Area of the city 2,720 acres. Pop. in 1841, 28,842; in 1851, 36,303. Pop. of the parliamentary borough, in 1841, 30,152; in 1851, 40,359. Area of the ainsty of the city, 49,720 acres. The ainsty was annexed to the West riding in 1837, as a wapentake, called Ainsty wapentake: but electors in the ainsty vote for members in the North riding. The whole of it lies on the W side of the city, and extends to a distance, in one direction, of 10 miles. The city and ainsty together form the co. of the city. York is 198 m. by coach-road, and 218½ by railroad, NNW of London; and 201 m. SSE of Edinburgh. From Leeds it is 22 m. by coach-road, and 30 m. by railroad; from Hull, 40 m. by coach-road, and 51 m. by railroad. The city is situated in the centre of one of the richest and most extensive valleys in England, having generally an alluvial clay subsoil. It is surrounded by walls, which still remain of the original height, and were renovated in 1831. The older and principal part of the city rises from the E side of the Ouse, with a gentle acclivity, reaching the summit level about 300 yds. from the river. Over the Ouse there is a handsome three-arched stone-bridge. The Foss—which is retained at a level 7 feet higher than that of the Ouse, by lock-gates—is crossed by four bridges. The streets are mostly broad and open, contain many elegant buildings, and are well-paved and lighted with gas. The castle stands in the angle between the Ouse and the Foss. The castle walls are 1,103 yds. in circumference. The county-hall and new county-prison buildings occupy a portion of the area which amounts to 4 acres. The

prison is arranged on the radiated system. Extensive cavalry barracks were erected to the S of the city in 1796, at an expense of nearly £30,000. The guildhall comprises a very noble Gothic hall 96 ft. in length. A magnificent concert hall was built in 1825. The mayor's residence, in Blake-street, is a stately edifice. The city jail occupies a retired spot close to the city walls. There are public walks extending above 1 m. along the E bank of the Ouse; and the old city ramparts have been made into a dry flagged walk.—York minster, the most stately Gothic edifice in England, stands on the N side of the city, and, except on its northern side, is closely hemmed-in by other buildings. It was probably completed about the year 1410 or 1412, on the site of a still more ancient edifice. It is cruciform; and, in the order of its antiquity, consists of a south transept built in 1227, north transept built in 1260, nave finished in 1330, central tower begun in 1370, and choir extending from the west end to the east. Viewed in this order, it is perhaps the most perfect example extant of the history and progress of the Gothic style, during the lapse of nearly two centuries, which its construction occupied. The whole length of the edifice from E to W is 524½ ft.: breadth of E end 105; of W 109. Length of cross aisles from N to S 222 ft.: height of grand lantern tower 235: height of two western towers 196; height of nave or body of church 99: height of eastern window 75; breadth, 32 ft. The W front is adorned with two beautiful towers, between which, over the entrance, is a window of fine painted glass. The lantern steeple is ornamented with great taste, and has 8 windows, 45 ft. in height. The choir is divided from the rest of the church by a curious stone screen, over which is a noble and newly built organ; the front is adorned with statues of the kings of England, from William the Conqueror to Henry VI. There are 32 stalls for the prebendaries, all of marble; behind which, on each side of the choir, are ranges of carved wood work adorned with pinnacles. The ascent to the altar is by a flight of 16 steps, and the whole of the body of the church is paved in mosaic. Many of the ancient nobility, as well as archbishops, lie buried here, and some of the monuments are magnificent. The chapter-house is a fine specimen of Gothic architecture. It is an octagon 63 ft. in diameter, and 67 ft. high; the roof, supported without pillars, is a cone of carious carved work covered with lead. Around the interior of the octagon are 44 beautiful marble stalls; and in each of the eight sides is a window except in one, through which is the entrance from the transept. On 2d February, 1829, a lunatic set fire to the choir of this venerable church, the stalls of which, with the organ, and part of the roof, were completely destroyed. A restoration was effected in 1833, under the direction of Mr. Smirke, at an expense of £65,000, which was defrayed by voluntary subscription. In May 1840, the SW tower was accidentally fired, and the roof of the nave became involved in the disaster. The expense of the restoration thus again rendered necessary, was estimated at about £20,000, and the repairs have now been completed and defrayed by voluntary subscription. In the southern tower a huge bell—the largest in England—has been put up. It weighs nearly 13 tons, and with the stock 16 tons; and is 9 feet 6 inches in height. The clapper, which is of wrought iron, weighs 4 cwt. It is rung with two wheels, each 14 ft. in diameter. It is heavier by 7 tons than 'Tom of Lincoln,' and by 5 tons than 'Old Tom of Oxford.'—The churches and dissenting chapels are much too numerous for minute description here. They are chiefly in the later style of

English architecture, with an occasional intermixture of the Norman and early English. The city returns two members to parliament. The franchise was conferred so early as 23° Edward I. Previous to the Reform act, the right of election was in the freemen. The number of electors registered in 1837, was 2,864, of whom 2,084 were freemen.

Diocese and see.] Until recently the diocese of York comprehended the archdeacons of Cleveland, East riding, West riding, and Nottingham; but the ecclesiastical commissioners have transferred the archd. of Nottingham to the dio. of Lincoln; and part of the archd. of Cleveland, to the new dio. of Ripon, and part to the dio. of Durham: see these articles. The diocese, therefore, now consists of the archd. of Cleveland and the East and West ridings: see article YORKSHIRE. The number of benefices in the dio. returned in 1831, inclusive of sinecure rectories, but exclusive of benefices annexed to other preferments, was 891, besides 12 not returned. The average gross income of the returned benefices was £250. The average gross yearly income of the archiepiscopal see, in 1831, was £18,798: nett yearly income, £12,629. By order in council, of date 21st June, 1837, the income of the future archbishops of York is limited to £10,000 per annum. The chapter of York, besides the archbishop, consists of a dean, precentor, chancellor, subdean, 4 archdeacons, 28 prebends, a subchanter, 5 vicars, &c.

Commerce, &c.] York was anciently a port, and as such furnished, in 1298, one vessel to the fleet of Edward I. The tide, however, does not now rise so far as the city, being interrupted by Naburn lock about 5 m. distant. Its trade was anciently very considerable. In 1854, it obtained the staple for wool; and the woollen manufacture flourished here so late as the reign of Henry VIII., and indeed until the commencement of the 18th century, when this branch of trade removed to the West riding. The manufactures are now of small extent. Glass, carpets, white and red lead, linens, and ironmongery, are manufactured to a moderate extent. The trade is small, and consists chiefly in the importation of coal. Vessels of 90 tons can sail up to the Onse bridge; and steamers ply to and from Hull in all states of the tide.

History.] In the time of Roman dominion, Y. was an important station; and in the year 70 was made the capital of the province of *Maxima Caesariensis*. In 212, Severus died here. Under the heptarchy, Y. became the capital of Northumbria, and afterwards of Deira. Before the reign of the Conqueror it was called a second Rome, from the extent of ground which it occupied, and the magnificence of its buildings. The citizens joined the Scots and Danes against the Conqueror, who in consequence razed the city to the ground. In 1187 it had partially risen from its ashes, but was then destroyed by a fire, which burnt down the cathedral, the abbey of St. Mary, and forty parish churches, besides many streets and public buildings. The first meeting known by the name of a parliament was held here in 1180, by Henry II. In the beginning of the reign of Richard I. an extensive massacre of Jews took place here, in which it is supposed that not less than 2,000 Jews perished. In 1251, Alexander, king of Scotland, was married here to the daughter of Henry III. In 1349 the plague ravaged York, and again in 1390, in 1604, and in 1850. In 1604 the plague raged to such an alarming extent at York, that the citizens left the city and encamped on Hob moor and on the Horsefair. During the parliamentary war the city was held by the royalists till July 1644, when it fell into the hands of Fairfax. At the period preceding the Revolution, this city was noted for its opposition to the king; and in the very year of the Revolution, James II. took away its charter, and declared the office of mayor to be vacant. York has given title to many noblemen, especially to sons of sovereigns. The last who held the title of Duke was Prince Frederick, second son of George III., by whose death, in 1827, the title became extinct.

YORK, a county and town of Western Australia. The co. is bounded on the N by the co. of Victoria; on the E by that of Howick; on the S by the co. of Grantham; and on the W by that of Perth. It is intersected from SSE to NNW by the

Avon, which flows thence into the SW corner of the co. of Victoria, and there making an abrupt turn, re-enters and traverses the NW corner of the co. of York, under the name of Swan river. Its principal affluents are the Mackie and Mortlock on the r., and the Dale on the l., and towards the SW are the head-streams of the Helena, also affluents of the Swan. The chief summits are Leake, Omma-ney, Molaine, Madie, Bakewell, and Matilda. On the W are extensive sandy downs, covered in some parts with cabbage trees, and in others with grass or scrub, while the W presents a more hilly aspect, and a predominance of red loam. Limestone is found in the SE towards Comely Peak. The chief towns are York, Beverley, and Northam. The town of Y. is on both sides of the Avon, which is here a mere chain of ponds, near the centre of the co., and about 60 m. E of Perth. It is surrounded by detached granitic hills, and beyond are immense tracts of slightly undulating surface, and densely covered with wood.—Also a mountain of New South Wales, in the co. of Cook, 72 m. WNW of Sydney. It forms the NW extremity of a range of mountains named King's table land, and has an alt. of 3,292 ft. above sea-level.—Also a parish of Tasmania, in the co. of Monmouth, bordered on the W by the Jordan.—Also a town in the co. of Devon, on the Tamar.—Also an island of the South Pacific, in the archipelago of New Britain. Port Hunter on the NE coast, is in S lat. 4° 7', and E long. 6° 15'. This island is called by the natives Amacata.

YORK, a village of Upper Guinea, on the W coast of the peninsula of Sierra Leone, on a small river, and 9 m. N of Cape Shilling. It is well and regularly built, and contains some handsome houses. The environs are well-cultivated, and produce iguames, maize, and cacao. The inhabitants are chiefly sawyers, and carry on an active trade in timber.

YORK, a county of Upper Canada, in the Home district, bounded on the E by Lake Ontario, and watered by the Humber and Don rivers. It is tolerably fertile towards the rear, but near the lake is poor and sandy. Area 808 sq. m. Pop. in 1852, 79,719.—Also a village in the township of Huoca, on the Grand river, 5 m. from Caledonia. Pop. 150.—Also a county in the SW of New Brunswick, bordering on Maine, and intersected by the St. John's river.

YORK, a county in the SW part of the state of Maine, U. S., comprising an area of 822 sq. m., drained by Saco and Monsam rivers and their branches, affluents of Piscataqua river by which it is bordered on the SW, and intersected by the Portland, Saco and Portsmouth, and the York and Cumberland railroads. It has a finely diversified surface, with numerous lakes, and is in some parts very fertile. On the Atlantic are several good harbours. Pop. in 1840, 54,034; in 1850, 60,101. Its capital is Alfred.—Also a county in the SE part of the state of Pennsylvania, comprising an area of 864 sq. m., bordered on the NE by the Susquehanna, and drained by its tributaries, Cadoras, Conewago and Yellow Breeches creeks. It has a hilly surface, and is generally fertile. It is intersected by the York and Cumberland, the Baltimore and Susquehanna, the Hanover branch, and the York and Gettysburgh, and the Susquehanna and Tide Water Gettysburgh canal. Pop. in 1840, 47,010; in 1850, 57,450. Its capital is York.—Also a county in the SE part of the state of Virginia, in the centre of the peninsula between James and York rivers. It has a diversified surface, and possesses considerable fertility. Pop. in 1840, 4,720; in 1850, 4,460. Its capital is Yorktown.—Also a district of

the N part of the state of South Carolina, comprising an area of 731 sq. m., drained by King's, Bullock's, Turkey, and Buffalo creeks, affluents of Broad and Catawba rivers, and intersected by the Charlotte and South Carolina, the King's mountains, &c., railroads. It presents a generally level surface, and possesses considerable fertility. Pop. in 1840, 18,383; in 1850, 19,433. Its capital is Yorkville.—Also a township and port of the co. of the same name, in the state of Maine, 94 m. SSW of Augusta. The surface is diversified, and the soil variable in quality. Pop. in 1840, 8,111; in 1850, 2,980. The village is in N lat. 43° 10', and W long. 70° 40'. It has a harbour capable of receiving vessels of large size, and was formerly capital of the co.—Also a township of Livingston co., in the state of New York, 220 m. W of Albany, bordered on the E by the Genesee river, and the Genesee Valley canal, and drained by branches of the river. Pop. in 1840, 3,049; in 1850, 2,785.—Also a township of York co., in the state of Pennsylvania, 21 m. SSE of Harrisburg, in N lat. 39° 58', and W long. 76° 40', intersected by the York and Cumberland, the Baltimore and Susquehanna, and the York and Wrightsville railroads. Pop. in 1840, 4,779; in 1850, about 6,000.—Also a township of York co., in the same state. Pop. in 1840, 1,294.—Also a township of Athens co., in the state of Ohio, drained by Hocking river and its tributaries. Pop. in 1840, 1,601.—Also a township of Belmont co., in the same state, bounded on the E by Ohio river, and drained by Captina creek. Pop. 1,294.—Also a township of Darke co., in the same state. Pop. 369.—Also a township of Medina co., in the same state. Pop. 781.—Also a township of Morgan co., in the same state. Pop. 1,032.—Also a township of Sandusky co., in the same state. Pop. 1,301.—Also a township of Tuscarawas co., in the same state. Pop. 865.—Also a township of Van Wert co., in the same state. Pop. 181.—Also a township of Union co., in the same state, drained by Rush and Bogues creeks, affluents of Sciota river, and 42 m. NW by N of Columbus. Pop. in 1840, 493; in 1850, 831.—Also a township of Washtenaw co., in the state of Michigan, 61 m. SE of Lansing, drained by affluents of Raisin river. Pop. in 1840, 1,146; in 1850, 1,360.—Also a township of Switzerland co., in the state of Indiana. Pop. in 1840, 1,331.—Also a township of Steuben co., in the same state. Pop. 191.—Also a township of Noble co., in the same state. Pop. 289.—Also a village of Gibson co., in the same state, 120 m. SW by S of Indianapolis, near the Evansville and Illinois railroad.—Also a village of Crawford co., in the state of Illinois, on the W side of Wabash river, and 115 m. ESE of Springfield river. Pop. in 1840, 850; in 1850, 500.—Also a river in the state of Maine, in the S part of the township of York, which flows E and falls into the Atlantic by a wide embouchure, forming a capacious harbour.—Also a river of the state of Virginia, formed by the confluence of Pamunkey and Mattaponi rivers, which unite in the SE extremity of King William co., and which, after a course of about 30 m., enters Chesapeake bay, by a mouth 3 m. in width. It forms the best harbour in Virginia.

YORK (CAPE), a headland forming the NE point of Australia, advancing into Torres straits between the ocean and the gulf of Carpentaria, and opposite New Guinea, from which it is distant about 80 m., in S lat. 10° 41', E long. 142° 34'. To the NE, about 7 m. from the continent, is a group of islands 3 in number, of the same name. The principal island is about 3 m. long, and has a conspicuous flat-topped hill. It is surrounded by coral reefs.

YORK (GULF OF), a sound or gulf of North-west

Australia, to the S of Montague sound, and N of the embouchure of Prince Regent's river, in S lat. 14° 50', and E long. 125° 5'. Its entrance, formed by Capes Pond and Hardy, is about 18 m. in width. It receives the waters of two rivers, viz., Roe river at the head, and Harper river on the N, and forms a spacious harbour, distinguished as Prince Frederick's harbour. It is bounded on all sides by precipitous rocks from 100 to 300 ft. in height, and contains numerous islands.

YORK (New), a village in the township of Murton, parish of Tynemouth, Northumberland. Pop. 253.

YORKE, a river of New South Wales, in the district of Liverpool Plains, an affluent of the Turraile.

YORKE PENINSULA, an extensive promontory of South Australia, extending between the Gulf of St. Vincent on the E, and Spencer's Gulf on the W, and separated on the S from Kangaroo island by Investigator's strait, and terminating in the SW in Cape Spencer or Berthier. Its shores are generally low and sandy, and, with the exception of the cape already named, and Corny Point and Cape Pierce, forming Hardwick bay on the W, present no important point of outline.

YORKFLEET, a township in the parish of Howden, E. R. of Yorkshire, 6½ m. SE by E of Howden, at the entrance of the Ouse into the Humber. Area 1,597 acres. Pop. in 1851, 206.

YORK HAVEN, a village of York co., in the state of Pennsylvania, U. S., on the SW bank of the Susquehanna, at the junction of the Conewago, and intersected by the York and Cumberland railroad.

YORK MINSTER, a summit on the S side of Waterman island, Terra-del-Fuego, near the entrance to Christmas sound, in S lat. 55° 24' 30', and E long. 70° 1' 50'.

YORK POINT, a headland of Patagonia, in Magalhaens strait, near a roadstead of the same name, in S lat. 53° 32' 35". The roadstead is between Port Gallant and Jerome channel, and off Bachelor's river.

YORKSHIRE, a northern maritime county, by far the largest in England, extending, in its extreme points, between 53° 18' and 54° 40' N lat., and between 2° 40' W and 0° 10' E long. It is bounded on the N by Westmoreland and Durham, divided from the latter by the river Tees; on the E by the German ocean; on the S by the Humber, dividing it from Lincolnshire, and by the shires of Nottingham, Derby, and Chester; and on the W by Lancashire. The form of the whole county is that of an irregular quadrangle, the longest diagonal extending from NW to SE, about 130 m., and the shortest from SW to NE about 90 m. Square area 3,635,820 acres. From its great extent, this co., exclusive of the city and ainsty of the city of York, has been distributed into three grand districts, called *ridings*, a name derived from a Saxon term signifying *thirds*. The north riding is divided into 11 wapentakes besides Whitby Strand liberty; the east into 7; and the west into 9. There are 613 parishes in the county, 1 archiepiscopal city, 17 parliamentary boroughs, and 59 market-towns. Inhabited houses in 1831, 261,281; in 1841, 307,372; in 1851, 360,188. The pop. of the co., with that of the city in 1801, was 858,892; in 1831, 1,371,359; in 1841, 1,591,584; in 1851, 1,797,995. Mr. Phillips, in an able chapter on the races of men in Yorkshire, says: "If, without regard to any real or supposed evidence of their national origin, we attempt to class the actual pop. of Yorkshire into natural groups, we shall find, independent of Irish emigrants, three main types, frequently distinct, but as often confused by inter-

change of elementary features. First, Tall, large-boned, muscular persons; visage long, angular; complexion fair, or florid; eyes blue, or grey; hair, light brown, or reddish. Such persons in all parts of the country form a considerable part of the population. In the North riding, from the eastern coast to the western mountains, they are plentiful. Blue-eyed families prevail very much about Lincoln. Second, Person robust; visage oval, full and rounded; nose often slightly aquiline; complexion somewhat embrowned, florid; eyes brown, or grey; hair brown, or reddish. In the West riding, especially in the elevated districts, very powerful men have these characters. Third, Persons of lower stature and smaller proportions; visage short, rounded; complexion unbrowned; eyes very dark, elongated; hair very dark. Such hair and eyes are commonly called black. Individuals having these characters occur in the lower grounds of Yorkshire, as in the valley of the Aire below Leeds, in the vale of the Derwent, and the level regions S of York. They are still more frequent in Nottinghamshire and Leicestershire, and may be said to abound amid the true Anglians of Norfolk and Suffolk. The physical characters here traced cannot be, as Dr. Pritchard conjectures in a parallel case in Germany, the effect of some centuries of residence in towns, for they are spread like an epidemic among the rural and secluded population as much as among the dwellers in towns. Unless we suppose such varieties of appearance to spring up among the blue-eyed races, we must regard them as a legacy from the Roman colonists and the older Britons, amongst whom, as already stated, the Iberian element was conjecturally admitted. Adopting this latter view, there is no difficulty in regard to the other groups. They are of North German or Scandinavian origin, and the men of Yorkshire inherit the physical organization, and retain many of the peculiarities of language of their adventurous sires. In the words employed, in the vowel sounds, the elisions, and the construction of sentences, the Yorkshire dialects offer interesting analogies to the old English of Shakspeare and Chaucer, the Anglo-Saxon of the Chronicles, and the Norse, as it is preserved to us by the Icelanders."

Climate. The climate of the North riding is various. In the vale of York the air is mild and temperate, except near the moors. The Howardian hills are cold. Ryedale and the marshes on the skirt of the Derwent enjoy a mild but damp air. The great alt. of the eastern moorlands renders their climate extremely cold. The vale of Cleveland has a climate somewhat severe; but the dryness of the soil, and the frequent use of lime, concur to accelerate the harvest. The climate of the western moorlands is colder and more moist than that of the eastern. Some variations also exist in the East riding, it being colder on the eastern than on the western side of the wolds. The levels in the western part of this riding enjoy a mild climate. In the eastern parts of the West riding, towards the banks of the Ouse, the climate, as well as the face of the country, resembles that of the East riding on the opposite side of the river; and damps and fogs are somewhat prevalent. In the middle district the air is sharper, clearer, and more healthful. In the western the climate is cold, tempestuous, and rainy.

Surface. The geographical features of this co. are strongly marked, and render the whole province one of the most interesting in the kingdom. The North riding is distinguished by a coast strikingly bold and rocky, and presenting cliffs which occasionally rise to an alt. of 500, and even 800 ft. There is an average loss of land, by encroachments of the sea on this coast, of about $2\frac{1}{2}$ yds., or 33 acres annually. A little further inland, successive ranges of hills, rising one above the other, form the elevated tracts of the moorlands, presenting a dreary and desolate aspect of hopeless sterility. Further westward appear the extensive vales of Cleveland and York, and beyond them the western mountains

and moorlands. The East riding is the least interesting in the county, and, with the exception of the wolds, displays no prominent variations in the appearance of the country. The West riding is irregular in its surface—so far westward as Sheffield, Bradford, and Otley, it rises into hills and is beautifully variegated—farther westward still it becomes mountainous and rugged, occasionally intersected with beautiful valleys, and displaying, in Ingleborough, Wharfedale, Pennigent and Bowfell some of the loftiest passes in England.

Soils and produce. In the North riding, the soil along the coast is brownish clay and loam: the hills abound with alum-shale. The district of Cleveland has a fertile clay and fine red sandy soil. The vale of York, both in soil and fertility, is very variable. Swaledale, on each side of the river Swale, is extremely fertile. The surface of some of the higher hills in the eastern moorlands is entirely covered with large masses of freestone and extensive morasses, and peat bogs highly dangerous to pass. In the West riding the soils vary from a deep strong clay or loam to the worst peat earth. In the East riding there is a light loam with a mixture of gravel in the sheep districts of the Wolds. The flat country extending between the wolds, the Ouse, and the Humber to Hull, towards the Spurn-head, along the side of the Humber, presents a soil of a strong nature. Throughout the greater part of the North riding, agriculture has, within the last few years, advanced as rapidly as in most parts of the kingdom, considering the circumstances of climate and soil. In the vale of York it is computed that one-third of the ground is in tillage, and two-thirds in grass. The enclosed lands, in many of the dales, are chiefly appropriated to meadow. The lower and better parts of the moors are mostly stinted pastures, on which the cattle are kept in summer. Barley is not much cultivated in the North riding, nor rye, except on poor and sandy soils. Meslin, or a mixture of wheat and rye, is very common, and of this the household bread is made. Ryedale is as remarkable for the culture of oats as Cleveland is for that of wheat. The extent of the woodlands is comparatively small. There is a considerable quantity of timber in the hedge-rows. The oak timber, though not large, is of an excellent quality, being produced slowly on sound, and often rocky ground. The breed of cattle is chiefly the short-horned. The northern part of the vale of York, and of Cleveland, are known by the name of Tees-water breed. This district is supposed to produce the largest cattle in England, and the breed has of late years been greatly improved. The Tees-water sheep are large, coarse boned, and slow feeders; and the wool is harsh and dry. But the stock has been greatly improved by a mixture of the Disley and Northumberland breeds. The native moorland sheep are small. Their wool is worked up into knitted hosiery, for which the dales are celebrated. On the western moors, however, the sheep are chiefly of the small Scotch breed. Yorkshire has long been famed for its horses, and the North riding is particularly distinguished for its breed. The Cleveland horses being cleanly made, strong, and active, are extremely well-adapted to the coach and to the plough; those of the northern part of the vale of York are, by the general introduction of the racing blood, rendered the most valuable breed for the saddle. The southern part of the vale, the Howardian hills, Ryedale, and the marshes, also produce a great number of horses both for the saddle and the coach. The dales of the eastern moorlands rear many horses, which, being of a smaller breed, are too low for the coach, but are a useful and hardy race. Horses also constitute a

considerable part of the stock in the higher parts of the western moorlands. They are generally bred between the Scottish Galloways and the country breed, and are a hardy and very strong race, in proportion to their size: these are chiefly sold into the manufacturing parts of the West riding and Lancashire for the ordinary purposes. In the East riding greater improvements have been made in agriculture than in any other portion of the county. In the low grounds adjoining to the river Hull, such improvements have been made by drainage as less than a century ago would have been deemed impossible. On the wolds very great improvements have taken place. The valleys and declivities of the hills now wave with plentiful crops of wheat, and neither servants nor labourers will eat barley bread. The rabbit-warrens are rapidly disappearing, and the breed of sheep has been improved, especially by crosses from the Leicestershire. Enclosures have indeed become almost general. The whole of the level, extending from the foot of the wolds to the western limits of the riding, as well as the rest of the East riding, is now a corn country. Although there are no extensive woods between the wolds and the Ouse, there are perhaps a superabundance of plantations and trees in the hedge-rows of old enclosures. In the West riding almost all the arable land is enclosed with hedges or stone walls; the former in the eastern, the latter in the western parts. A greater part of this riding is exclusively kept in grass. The extensive commons of Hatfield, Stainforth, Thorne, &c., extending to about 12,000 acres, have been enclosed and rendered arable. In the arable lands of the West riding, a greater quantity of wheat is raised than of any other grain. The quantity of oak and ashwood is very considerable, and both meet with a ready market at the shipping and manufacturing towns. A large portion is also used at the mines and collieries. Draining is assiduously attended to in the West riding. In regard to cattle, less attention has been paid to the breeds in this district, than in either of the other two ridings. The horned cattle may be classed under three distinct heads: First, the short-horned or Holderness breed, which prevails in the eastern parts of the riding; second, The long-horned, or Craven breed, which are both bred and fed in the western parts; and, third, A cross-breed between the two above-mentioned. Immense numbers of Scotch cattle, also, are fed in this district, and sold to the butchers. The sheep have been so often crossed, as to confound all distinction. But a mixture of the Leicestershire breed has much improved them of late years.

Minerals, &c.] In the North riding the minerals consist chiefly of the alum mines, on the coast of Whitby, and the lead mines in Swaledale and the neighbouring valleys. Excellent freestone or grit is found in many parts of this riding. A long but narrow ridge, producing lime of a quality peculiarly excellent for agricultural purposes, extends along the edge of the eastern moorlands. Marble of various kinds is found in many parts of the western moorlands, but is converted to no other purposes than those of making lime or repairing roads. Coal is found, but the quantity is small and the quality bad. In the East riding, chalk is the principal fossil substance. The mineral productions of the West riding are of peculiar value, as they create and supply the manufactures of the district. They consist of coal, iron, and stone; and lead is extracted in great abundance from the mines of Grassington and Pateleybridge. The West riding, indeed, yields in geological interest to no equal space in the kingdom. In this portion of the island

four clearly marked divisions present themselves. The levels on the east rest on the stratum of red sand and clay, with gypsum or alabaster in varying quantity. The magnesian limestone range is one great plain rising from beneath the levels, and terminating toward the west in a regular well-defined edge, forming the partial summit of drainage. In the south is the great Yorkshire and Derbyshire coal field, which rivals, or even surpasses in importance, that of Northumberland. The mining district is, in some parts of the north, exceedingly variable in features, occupying either high or low ground, producing or not producing metallic ores.

Rivers.] See articles *TESS* and *SWALE*. The Swale waters the romantic tract called Swaledale; and passing by Richmond and Catterick, enters the Vale of York, and flows in that level country till it receives the Wiske, a small river rising near Osmotherley. It then continues its course till at Myton it joins the URE: which see. The united river then continues its course to about 6 m. below Borough-bridge, where it takes the name of the OUSE: which also see. The Nidd rises in Netherdale, and passes by Knaresborough, to Nun-Monkton, where it joins the Ouse. The Foss rises near Craike-Castle, and joins the Ouse at York. The Wharfe rises at the foot of Craven hills, waters the beautiful district of Wharfedale, passing Tadcaster, and joins the Ouse at Nun-Appleton. The Derwent rises in the eastern moorlands, in the North riding, within about 4 m. of the sea; runs at first in a line almost parallel to the coast, by Ayton, to the foot of the Wolds, and afterwards in a westerly direction, till it receives the Rye from Helmsley; then south-westwardly by Malton, and thence by Gate-Helmsley, Stamford-bridge, &c. to the Ouse, near Barmby, from which it is navigable for vessels of 25 tons burthen to Malton. From its junction with the small river Hartford near its source, the Derwent forms the boundary between the North and East ridings, till it approaches near Stamford-bridge, where it enters the East Riding. The AIRE and CALDER are described in separate articles: which see. The Don rises in the western moors beyond Pennistone, flows south-east by Sheffield, north-east by Rotherham, Doncaster, &c., and north by Rawcliffe bridge to Goole, where it falls into the Ouse. In its course it is joined by the Hodbeck, the Went, and other tributaries, and by several canals to be afterwards noticed. The Ouse is thus the great drain of all Yorkshire. See article *HULL*.

Canals.] The canals of Yorkshire are chiefly in the West riding.—1. The Barnsley canal: from the Calder, near Wakefield, to the Dearn and Dove canal near Barnsley, a distance of 15 m.—2. The Bradford canal: from Bradford to the Leeds and Liverpool canal at Windhill, 8 m.—3. The Dearn and Dove canal: from the river Don near Mexborough to the Barnsley canal, 9 m.—4. The Huddersfield canal: from Huddersfield to the Manchester and Oldham canal in Lancashire, 19½ m., passing through a tunnel 2½ m. in length.—5. The Leeds and Liverpool canal: beginning at Leeds, and leaving the co. near Colne, in Lancashire.—6. The Calder and Hebble canal, on the line of the river Calder from Wakefield to Halifax.—7. The Ramaden canal: from the Calder and Hebble navigation to the Huddersfield canal, 4 m.—8. The Rochdale canal: entering from Rochdale in Lancashire, and joining the Calder and Hebble navigation near Halifax.—9. The Stainforth and Keadley canal: partly in this co. and partly in the Isle of Axholme, county of Lincoln, branching from the navigation of the Don at Fishlake near Stainforth, and terminating in the Trent at Keadley, 15 m.

Railways.] The North Midland, the York and North Midland, and the Great North of England railways, forming part of the main line from the Midland and more southern parts of England, intersect this co. The North Midland railway enters from Derbyshire by crossing the small river Rother, and runs northwards by Mablethorpe near Rotherham, Kilnhurst, Swinton, Darfield, Cudworth near Barnsley, Oakenham near Wakefield, Alkton near Normanton, Woodlesford, and Leeds. The York and North Midland joins the North Midland line at the Alkton station near Normanton, and runs NE 23½ m., by Castleford, Burton-Salmon, Milford, Sherburne, Ullenscliffe, and Bolton-Percy, to York. The

Great North of England line joins the York and North Midland at York, and runs NNW by Shepton, Tollerston, Aine, Bunkelt, Seesay, Thirsk, Otterington, Northallerton, Danby, Waka, East Cowton, and Croft. At Croft it enters the co. of DURHAM: which see. See also CROFT, DARLINGTON, and NORTHUMBERLAND. The Manchester and Leeds line of railway enters this co. at Todmorden, and terminates in the North Midland at Normanton: see article LANCASHIRE. This important line completes the railway communication across the island by its connections with the Leeds and Selby, and the Selby and Hull lines. The Leeds and Selby railway runs from Leeds by Garforth, Muckfield, Milford, and Hamble, to Selby, crossing the York and North Midland line at Milford, where the general western terminus of the line may be said to be now placed. The Selby and Hull line runs from Selby by Cliff, Howden, Eastington, Saddlethorpe, Brough, Ferryby, and Hessle, to Hull: a distance of 80½ m. The Manchester and Sheffield railway enters this co. through a tunnel near Tintwistle, and runs by Penistone, &c. to Sheffield, as described under article LANCASHIRE: which see. The Sheffield and Rotherham line runs from Sheffield by Holmes and Brightside to Rotherham, a distance of 14½ m., exclusive of a branch of 1½ m. to Greenborough. Leeds and Bradford are connected by railway. A continuation of the Stockton and Darlington to Middlesbrough, traverses a portion of the northern boundary of the North riding of this county. See also articles DURHAM and MIDDLEBROUGH. The Pickering and Whitby railway runs from Pickering NNE in rather a circuitous course by Newton-dale, &c., to Whitby, a distance of 24 m.

Commercial History.] Respecting the origin and the earlier history of the woollen manufactures of Yorkshire, we must here refer to article HALIFAX. The beginning of the 17th cent. was an important epoch in the history of the woollen manufacture, as till then the English were unable to dye and dress their own cloths, which were, therefore, usually sent to Holland to be dyed and dressed, and returned to England for sale. The introduction of the inventions of Arkwright and Watt towards the end of the 18th cent. and the beginning of the present, formed a still more important epoch, as these inventions were soon applied to the woollen and worsted manufacture, and produced an entire revolution in some of its seats in this county. The woollen trade is carried on chiefly in and around LEEDS and HUDDERSFIELD: which see; the worsted stuff at BRADFORD and HALIFAX; and blankets and carpets at DAWSBURY and HECKMONDWICK: which also see. In 1838 the number of woollen-mills in this county was 606, employing 18,735 males, and 8,813 females; in 1850 they were 880 in number. The worsted-mills in 1838 were 348, employing 6,992 males, and 19,611 females; in 1850 they were 418. There are also an immense number of hand-loom weavers in this trade, as well as in the linen, silk, and cotton manufactures. The number of flax-mills in the co. in 1838 was 91, employing 3,230 males, and 6,414 females; in 1850 the flax-mills were only 60 in number. In 1838 the number of cotton-mills was 169, employing 5,662 males, and 6,774 females; in 1850, the number of cotton-mills was 227, with 1,943,807 spindles, and 8,102 power looms. The next great manufacture in this county is that of cutlery: see SHEFFIELD.

Franchise and Government.] Previous to the passing of the Reform act, two members were returned to parliament for the county, and two each for the boroughs of Aldborough, Beverley, Borough-bridge, Heydon, Kingston-upon-Hull, Knaresborough, New Malton, Northallerton, Pontefract, Richmond, Ripon, Scarborough, Thirsk, and York. Under the Reform act two members are returned for each of the ridings. The boroughs of Aldborough, Borough-bridge, and Heydon, were disfranchised; those of Northallerton and Thirsk were deprived of one member each; Bradford, Halifax, Leeds, and Sheffield, were granted two members each, and Huddersfield, Wakefield, and Whitby, one each. The co. is included in the northern circuit. The assizes are held at York, where there is a county jail. This co. is in the province of York; and until recently was partly in the diocese of Chester, and partly in that of York. The former part consisted

of the deaneries of Richmond, Catterick, and Borough-bridge, with part of Kirkby-Lonsdale, all in the archd. of Richmond and dio. of Chester; and the latter of the deaneries of Cleveland, Ridall, Bulmer, Ripon, and Ripon with Massam, all in the archdeaconry of Cleveland; the deaneries of Dickering, Buckrose, Herthill and Hull, and Holderness, all in the archd. of the East riding; and the deaneries of Craven, York Ainsty, York city, Pontefract, and Doncaster, all in the archd. of York, or West riding. By orders in council, however, of recent date, those parts of the co. previously in the dio. of Chester, together with the deaneries of Ripon, Ripon with Massam, Craven, and parts of York Ainsty, and of Pontefract, have been transferred from their respective dioceses in order to form the new diocese of Ripon: see that article.

YOUGHAL, or **ST. MARY'S OF YOUGHAL**, a parish and borough of co. Cork. Area of p. 4,830 acres. Pop. in 1831, 11,327; in 1841, 12,054. The surface extends along the Blackwater and its estuarial expansion, to the middle of the W side of Youghal bay. The inner portion of Youghal bay constitutes the harbour, and comprises the small estuary of the Blackwater. At the entrance of the harbour may be seen the remains of the foundation of a mill standing on a rock, which shows that the ocean has greatly exceeded its limits on this shore.—The burgh of Youghal stands on the estuary of the Blackwater, $8\frac{1}{2}$ m. E by N of Castle-Martyr, $12\frac{1}{2}$ S by E of Lismore, and $23\frac{1}{2}$ NE of Cork. It extends between the W margin of the estuary of the Blackwater, and the E base of a long and steep hill. The principal street is about $\frac{3}{4}$ m. in length. Vestiges of the old town walls enclose the central district of the town, and an adjacent portion of the hill slopes. The suburbs are large, and extend in every direction up the hill, behind the old town wall, and contain many very miserable cabins. A considerable improvement upon the town has recently been effected, in the re-edification of several old and tottering buildings, the erection of a good inn, the building of one or two good public edifices, the introduction of gas, and the regular cleansing and paving of the streets. The church, situated in the NW part of the town, and usually called the collegiate church,

displays an incongruous mixture of parts and tastes, but was in its original condition one of the finest specimens in all Ireland of the pointed architecture now technically known as the decorated English style. The pop. of the burgh in 1841 was 7,372. It sends one member to parliament. Its only manufactures are bricks, cordage, and malt liquors.

YOUGHAL BAY, a bay on the E side of Lough Derg, co. Tipperary, projecting from the main body of the lough at a point E by N of the opposite projection of Scariff bay. It is well-built, and contains a splendid town-hall, five churches, a bank, a royal college, an hospital, a public library, and an academy of painting. The principal buildings are the cloth and town-hall, both within one large Gothic edifice, founded in 1342, and surmounted by a fine tower, the ancient church of St. Martin, formerly the cathedral, and the castellany, which has a richly ornamented façade. In the 14th century, Y. was

noted for its cloth. Lace now forms its staple manufacture; but it has also several spinning-mills, bleacheries, oil-works, dye-works, tanneries, a salt-refinery, soap-works, and manufactories of a variety of linen and woollen fabrics, tape, &c. This town, formerly one of considerable importance, was, previous to the year 800, a mere fortress, which was destroyed by the Normans, but rebuilt in 960 by Baudouin III., count of Flanders. A town gradually rose around it, which was aggrandised by Count Thierry d'Alsace. In 1128 it was taken by Louis VI., king of France; in 1213 by Philip Augustus; in 1297 by Philip-le-Bel; and, in 1383, sustained an unsuccessful siege by the Gauls. In 1388, it was enlarged and walled round by Philippe-le-Hardi, duke of Burgundy. Y. was taken in 1577, and again in 1648, by the Duke-de-Conde; by the archduke Leopold the following year; by Turenne in 1658; and, in 1678, by Louis XIV. By the treaty of Nimeguen, it was ceded to the French, and became one of the strongest places in Flanders. Under the French empire, it was the capital of an arrond. of the dep. of the Lys.

YUCARES, a tribe of Indians of Bolivia, who inhabit the dep. of Cochabamba.

YUCATAN, or **MERIDA**, a peninsular region of America, situated between the gulf of Mexico and the bay of Honduras, and between 17° and 22° N lat., and 87° and 94° W long.; having the territory of British Honduras on its SE coast; and the Mexican prov. or state of Tabasco on the W. The gulf of Mexico stretches along its W side, the gulf of Honduras on the E. Its length from N to S is about 250 m.; and its average breadth 200 m. Area 79,500 square miles. The pop. is stated at 668,623 in 1854. The central part of the peninsula is occupied by a ridge of high ground, which becomes gradually lower as it advances to the N; at the northern extremity its elevation is about 3,000 ft., but near Cape Catoche it sinks to a few hundreds. The ridge in the W is skirted by an extensive plain, which towards the N is about 100 m. wide, and becomes narrower towards the S. Its surface, however, is so sandy and arid, that from the bay of Campeché to Cape Catoche there is not a single spring of fresh water along the coast. To the S of Cape Catoche, on the eastern side of the peninsula, and also on the west coast, to the S of Rio Francisco, near Campeché, as far as the mouth of the river Usamasinta, the country is undulating and even hilly. The soil, except on the very shores, is less sandy, and the country is chiefly covered with lofty forest trees. The climate is hot and unhealthy along the coasts, but in the interior the atmosphere is said to be salubrious and the heat more tempered. Mr. Ward says, "Yucatan is one of the poorest states in the Mexican federation. On parts of it maize, cotton, rice, tobacco, pepper and the sugar cane are produced; with dyewoods, hides, soap, &c.; but the scarcity of water in the central parts of the peninsula, where not a stream of any kind is known to exist, and the uncertainty of the rainy season, render the crops very variable; and years frequently occur in which the poorer classes are driven to seek a subsistence by collecting roots in the woods, when

a great mortality ensues in consequence of their exposure to a very deleterious climate. Y. has no mines. An active intercourse was formerly carried on with Havana, which Y. supplied with Campeché wood, salt, hides, deer skins, salted meat and the *jenequen*, a plant from which a sort of coarse thread was made and wrought up into sacking, cordage and hammocks. This trade was cut short by the war; and as few foreigners have been induced to settle in Y., the inhabitants have derived but little advantage from the late change of institutions." Mr. W. F. Robertson agrees with Mr. Wood in describing Y. as a poor country. "To Europe," he says, "it only sends dye woods, (Palo de Campeché;) but it supplies Mexico, New Orleans, Belize, and the Havana with a great variety of minor articles, as salt, hemp, hides, bags, cordage, coconuts, fruits, and other things; while, for the consumption of the country, the Yucatecos seem to have all the necessities and some of the luxuries of life. The fisheries are very extensive, and the poorer classes, Creole and Indian, on the coast, chiefly subsist by barter or consumption of the produce of the sea, the fish being at once good and abundant. They have all the tropical fruits, and many peculiar to the Spanish American colonies, as the *chirimoya*, *palta*, and others; while they also produce Indian corn, rice, coffee, sugar, rum, tobacco, &c. Horses, horned cattle, and sheep they possess in moderate abundance; they reckon up 1,888 *haciendas*, something between a farm and an estate, now the one, now the other; and 2,040 *ranchos* and *sitios*, which may be likened to the huts and hovels of the Irish peasantry, without the starvation, or to the holdings of the Highland cotters in Scotland."—It is administratively divided into 5 districts: viz. 1st, Merida, with a pop. of 118,839; 2d, Yzmal with 72,096; 3d, Valladolid, 97,468; 4th, Tekaz, 134,000; 5th, Campeachy, 82,232. The cities called after the above districts have respectively, 1st, the capital Merida, 24,090 inhabitants; 2d, Yzmal, 5,335; 3d, Valladolid, 11,457; 4th, Tekaz, 4,000; 5th, Campeachy, 15,357. There are of secondary towns and villages 253, with populations ranging from 7,551 down to 924. The townspeople of Campeachy claim a much higher pop. than here stated, some calling it 30,000. Bacalar is a town on a small lake near the Rio-Hondo, N of Balize. Considerable quantities of logwood, mahogany, dye-woods, with some valuable drugs and medicinals, form its exports, which are carried down the river to the bay of Honduras, and principally shipped to England and the United States. Vittoria lies on the coast near the SW extremity of the peninsula. Valladolid is an inland town on the N, and has a communication by river to the Caribbean sea.—Yucatan presents many evidences of having been the abode in former times of a race of highly civilized people, but whence they came and whither they have gone will ever remain unknown. Their having existed is proved by numerous ruins of towns and villages, which exhibit much architectural beauty. The Indians of the present day are incapable of such works, nor indeed was their existence known to them previous to the researches of the European and American archaeologists, whose works have created such a lively interest. In the eastern part of the state, and particularly to the S of Merida, there are the remains of several ancient stone structures; one of which, called by the natives Uxmal, is still in good preservation; it is about 600 ft. square. The rooms, corridors and pillars are adorned with figures, in half relief, of serpents, lizards, &c., in stucco. There are also figures of men in the attitudes of dancers, and resembling in every respect

those which are found in the ruins of Palenque, which proves that the same race has swayed the destinies of all the lower province of Mexico as well as Yucatan. See articles UXMAL and PALENQUE.

[History.] The east coast of Yucatan was first seen in 1506, by Juan Diaz-de-Solis and Vicente Munos-Penson, who had accompanied Columbus in his last voyage; but the country, properly speaking, was discovered by Francisco Hernandez de Cordova, who landed in 1517, from the Havana, at Cape Catocha, the extreme NE point of the country. He went on to Campeachy, and thence to Champoton, opposed throughout by the Indians, who at last succeeded in beating him and his small force off, as they also did, next year, the expedition of Don Juan-de-Grajalon. This captain had sailed along the coast of Y. till he reached the Mexican prov. of Tabasco. Here the report of the riches of Mexico first met the greedy ears of the Spaniards; and the eventual result was the conquest of Mexico by Hernan Cortes. One of his chief captains, Don Francisco-de-Montejo, in 1526, undertook the conquest of Y.; and he obtained, moreover, from Charles V., a commission, or royal grant, appointing him *adelantado*, or governor, in perpetuity, for himself and his descendants, with various other privileges and immunities accorded to him and his followers. After going through incredible hardships, which were met with unflinching fortitude, and overcome by the prowess which was in these conquests everywhere displayed, the Montejos, first the father, and then the gallant son, succeeded in conquering the indigenous possessors of Y., so that, in 1542, it was raised to a captain-generalship of Spain, independent of Mexico, as well as of Guatemala. On the consummation of the independence of Mexico, Y. became an integral portion of that nation. From the dissolution of the empire, founded by Don Augustin Iturbide, until the formation of the pact which bound together the United Mexican states, in October 1824, Y. maintained an independent position, administering her own government, in the meantime, on republican principles. The compact of the confederation having been accepted by her, she became incorporated in the Mexican republic, and so remained until the consolidation of the states by Santa Anna in 1835, when a quasi separation took place, Y. standing aloof from all connection with the central power. In 1840 an actual secession was consummated, and Y. was proclaimed an independent republic, and the people soon after formed for themselves a constitution or fundamental law. Mexico in vain endeavoured to persuade or coerce Y. into submission; but finally the new republic wrested from that government a peace on its own terms. This peace was based on the convention of 14th December, 1843, which secured to Y. many advantages she had not before enjoyed, and relieved her from many oppressions from which she had, since her first incorporation, severely suffered. By the conditions of this peace, she became again incorporated with Mexico, and so remained until 1st January 1846, when she again solemnly renounced the connection and declared anew her independence. The chief cause which led to these results was the violation by Santa Anna of the convention of December 1843, causing, by a decree of 21st February 1844, the ports of the republic to be closed against the productions of Y., and subjecting that state to many harassing vexations. Another cause was the refusal of the chamber of deputies to recognise the convention as of any effect. These proceedings, and a renewal of the hardships which she had before endured, roused Y. to throw off the yoke of the supreme government, and to convocate a congress for the purpose of organizing an independent state. Towards the close of 1846, a frightful social war broke out with the Indian part of the pop. who had supported the Yucatecos in their struggle with Mexico, but were left unrewarded by the whites. Emboldened by political dissensions between the people of Merida and those of Campeachy, the Indians fell upon the provinces of Tekaz and Valladolid, took the towns, and, with fire and sword, devastated the country. A war was now begun, not only of extermination, but of pitiless cruelty, of savage and ferocious revenge. Men, women, and children were massacred with every variety of ingenious torture. Villages, towns, and cities were burnt or demolished; and the whole north-eastern division of the republic presented one vast scene of devastation or ruin. The troops of the government became panic-stricken, and everywhere dispersed. Terror extended itself on all sides: the people, abandoning their homes and their strongholds, sought for safety in a flight to the sea-coast. Valladolid and Tekaz were abandoned, and gradually the whole interior seemed to be returning to its original owners. While the Indians were thus gradually overpowering the white or Creole population of Y., the people sought for aid from their surrounding neighbours. But both the United States and Mexico were too busy with their own war to embarrass themselves with the troubles of Y. Mexico having at length made peace with the United States, admitted the offer of the commissioners sent to propose the incorporation of Y. with the Mexican nation. Arms and war-munitions, as well as money, were sent, and the whole white population rose up and armed. They attacked the Indians, routed them in successive engagements, dislodged them from their principal points of advance, and drove them towards their fastnesses in the east, bordering on the British settlement of Belize. But the war is by no means ended as yet. An obstinate struggle, on the part of the aborigines, still goes forward; and, with public opinion still divided, Y. is once more an integral part of the Mexican federation.

YUN-NAN, a province of China, bounded on the N by Tibet and the Chinese prov. of Sech-wen; on the NE by Sech-wen and Kwei-chu; on the E by Kwei-chu and Quang-si; on the S by Tonquin, Laos, and the Birman territories; and on the W by the Birman territories and the Bong country. It lies between the parallels of 22° and 28° N; and the meridians of 97° and 106° E; and has an area of 110,000 sq. m. Its surface is that of a highly rugged table-land, sloping from N to S; in the N rising in the Yung-ling, into very elevated snowy peaks; but on the S sinking into gently undulated level tracts, approaching in character to those which border the gulfs of Siam and Bengal. The Yang-tse-keang skirts a portion of the northern frontier in a SE course; crosses a projecting portion of this frontier; forms for some distance the common boundary with Sech-wen; and, a little to the E of the meridian of 102° , bends northwards, and leaves the prov. of Y. The Hong-keang rises to the S of the cap. of the prov., and running E, enters the prov. of Quang-si; the S and W portions of the prov. are drained by the head-waters of the great river of Tonquin, by the Meinam-kong, the Menam, the Thaleyn, and some affluents of the Irawady. High mountain-ridges separate the head-waters of these streams from each other. In the E part of the prov. and to the S of the capital, is the large lake called Sien, a feeder of the Yang-tse-keang; and to the S of it, and separated by a high ridge of mountains, lies the Serin lake, which sends its waters towards the Hong-keang. In the NW is Lake Tchao, a feeder of the Meinam-kong. The climate is rude, and there is comparatively but a small portion of the surface under cultivation; but this prov. is reputed to be rich in minerals, and gold, silver, tin and copper are wrought. The pop. has been estimated at 5,500,000, of which a large proportion appear to be affiliated to the Burmese.—The cap., which gives name to the prov., lies at the N extremity of Lake Chin, in N lat. $25^{\circ} 6'$, W long. $118^{\circ} 36'$. ZAANDAM, ZAAANREDEM, SAARDAM, or SARDAM, a town of Holland, in the prov. of North Holland, arrond. and 6 m. NW of Amsterdam, on the Zaan, near its confluence with the Y. Pop. 11,000. It consists of two parts separated by the river, and distinguished as Oost Z. and West Z. It is an "eminently Dutch town," and has a generally picturesque appearance, the houses, which are nearly all of wood, being fancifully painted, each having a garden attached, enclosed by a ditch. It contains about 1,000 mills, comprising manufactories of paper, sail-cloth, cinnabar, mustard, powder, pitch, starch, glue, saw-mills, &c. It has a port, and extensive building-docks, noted in the history of Peter the Great, who, in 1696, here wrought, under the name of Peter Mikhailov, as a common ship-wright.

ZAATSHA, an oasis and village of Algeria, in the Zab-Daari, or Northern Zab, about 20 m. from Biskara. It is a fortified village of about 150 inhabitants. It is of solid construction, surrounded by thick and high walls, and a deep moat, which offered formidable resistance to the French troops under General Herbillon. It is built in the centre of large gardens which contained 17,500 palm-trees and 1,500 fruit-trees, each standing 20 ft. from the other; the different enclosures were separated by tolerably high walls, and by wide drains for irrigation; moreover, its foundations are upon very solid ground, and, however slightly the ground may be excavated, water immediately shows itself in great abundance.

Two oases—Lichana, in the SW, an oasis with 50,000 palm-trees, and a village containing 1,800 inhabitants; and Zoonia, with about 5,000 trees, are united to Z. by their gardens. When attacked by General Herbillon's troops in 1852, every night new defenders from Lichana and Zoonia penetrated into this place, while profiting by the obstacles and shelter which the peculiar nature of the terrain affords, other parties kept up a murderous fire on the troops. Behind their ambuscades, these marksmen decimated the French soldiers, without their ever being able to perceive from whence the ball proceeded which proved fatal to them. Siege operations were undertaken; but the rising waters retarded their execution; then Zoonia and its palm-trees were destroyed; then an endeavour was made to isolate Z. from the gardens of Lichana by means of wide ditches: but it soon became clear that to isolate this vast triangle, would require a force of 50,000 men. The works advanced but slowly and with difficulty. Zoonia was destroyed, and Lichana then became the sole rallying-point for the allies, who hastened from all parts to the support of the defenders of Z. Their numbers were supposed to be not less than 4,000. Ultimately, after immense exertions, the fortress was taken.

ZABLJAK, a village and frontier fortress of Albania, at the head of the lake of Scutari, of considerable strategical importance, in the district of Mokraka. The village, which represents the former capital of the old princes of Servia, only contains about 50 houses. It was built in 1423 by Stephen the Black, lord of Montenegro and Zenta. His son, Ivan, resided in the stronghold as governor of Montenegro, and fought on the side of the Venetians, in 1478, against the Turks. In 1480 the Turks, already in possession of Scutari, revenged themselves by taking Z. by storm. In 1842 Ivan recovered it; but in the same year it was besieged anew by the Turks. Ivan now sought aid of the republic of Venice, pointing out how much he was suffering through their alliance: the senate, however, excused itself from rendering assistance, by alleging the separate

peace it had made with the Sultan Bajazet. Hereupon Ivan abandoned the fortress, and fled to Cettinge, in Montenegro, and Z. remained in the hands of the Turks until 1835. In that year, the Montenegrins agreed with two Albanian sentinels of the Greek religion, who opened the gates of the fortress on the night of March 25, and allowed them to take possession of the place. Hafiz Pasha, commandant of Scutari, hastened to the fort with numerous regular and irregular troops, whereupon the Montenegrins again abandoned it. In 1853, the Montenegrins again got possession of it by a *coup-de-main*; but were driven from it by Omer Pasha.

ZACATOTLAN, formerly a district of Mexico, on the coast of the Pacific, now comprised in the W part of the states of Mexico and Michoacan. It contains the town of Zacatula.

ZACATULA, **MUSCALA**, or **BALSAAS**, a river of Mexico, in the state of that name, which has its source in the Great Cordillera of Anahuac, to the SE of Cuernavaca; runs W; and after a total course of about 300 m., throws itself into the Pacific, near a town of the same name. The embouchure forms a port, which bears the same name. A recent notice of this river, by one of an exploring party of Americans, states, that starting from Mesquitlan, near the frontier of the state of Puebla and the first village in the state of Guerrero, on the river-bank, the downward course, for 4 leagues, lay to the S, and then W between high mountains, some of them nearly 1,000 ft. high, whose sides were covered with a dense forest, in which were noticed Brazil and Nicaragua wood, mahogany, and many other dye trees. The river was about 100 yds. wide, and 7 ft. deep, with a three-knot current. The rapids and rocks were but trifling impediments to steam-boat navigation. About one league below the village of Slal-co-so-titlan, the river Atanango enters from the N, and is as large as the Muscala. "All map-makers have made the mistake of marking the Atanango for the Muscala, and above the mouth of the Atanango they have made the Muscala flow to the S and E, instead of to the W and S. Disturnell's map of Mexico, of 1850, is the only correctly printed map of the course of the Muscala or Zacatula. Below the mouth of the Atanango the depth of water varies from 12 to 20 ft., without increasing in width. We are now fully satisfied," continues this writer, "that this river is navigable for steam-boats at all stages of water for 450 m. This will bring us within 100 m. of Puebla, and 170 m. more to Vera Cruz; all excellent stage road, which can be driven over in 36 hours; so that you may calculate as follows:—six days from New York to Vera-Cruz in steamer, 36 hours across land to the Muscala

river, 48 hours down to the mouth of the river; and 5 days thence to San Francisco—being less than 15 days from New York to San Francisco. The river Muscala is the largest and longest river exclusively in the republic of Mexico. The port of Zacatula, at its mouth, is the oldest port on the Pacific ocean, being the place where Cortez built his first ships on that sea. Among the old archives a record is made of the fact that Cortez transported iron, cordage, and other articles from Vera-Cruz to the head waters of the Muscala, and floated them down the river, so as to equip the first fleet built on the Pacific at the port of Zacatula. The hero Morelos, in the wars of independence, improved on this information, and brought up on rafts his artillery to Mesquitlan, near which village he was captured. The survey made by order of the state of Puebla in the dry season in 1850 reports 3½ ft. water in the channel from Mesquitlan to the Atanango river; and 4½ ft. thence for 15 leagues; then 6 ft., then 20 ft.; then 40 ft., and, for the last 100 m., 60 ft. of water in the channel. A beautiful bay exists near the mouth, and Humboldt, in his work on New Spain, frequently notices the port of Zacatula. Yet, with all this, the impression has prevailed that the river was not navigable, first originating in the fact, that it is not adapted to sailing vessels, without reflecting that it might be so for steam-boats. In the second place, the river has never been properly laid down on the charts, and all information of the courses, distances, depths, and currents was confined to the simple natives on the banks, who only knew it from village to village, and wherever it ran between high mountains it was said to contain falls. Again, the elevation of Puebla above the sea is known to be 7,000 ft., and many intelligent persons imagined that in 700 m., by the course of the river, that descent could not be overcome, without knowing the fact, that within the first 100 m. immediately below Puebla the descent is more than 3,000 ft. The elevation of Mesquitlan above the sea is only 2,000 ft., and in the village of Muscala Humboldt found the elevation to be less than 1,600 ft. Here is a river which has its mouth on the Pacific ocean, directly west from Vera-Cruz, and navigable for more than half the distance from port to port, and lying directly in the course, diminishing the distance by one-half from New Orleans to California, and the expense in the same proportion."—The town of Z. is 225 m. SW of Mexico, and 340 m. NW of Acapulco, on the l. bank of the river of the same name. Pop. 800.

ZAIRE, **ZAHIR**, or **Congo**, a large river of Southern Africa, which appears to have one of its sources somewhere under the parallel of 2° N, and between the meridians of 17° and 18° E. This head-stream pursues at first a course to the W of S, passing through the Anzeco and Wamba territories. Below Konkobale, it unites with a very large river coming from the SSE, which is probably the true main stream of the Zaire, which then flows in a prevailing W course to the ocean, into which it falls with a strong current in S lat. 6°, between the Kongo and Kakongo territories, by an estuary 10 m. in width. The N head-stream of the Z. was identified by some geographers with the Niger, and others even connected it with the imaginary fountains of the Nile. Mr. Cooley, in his recent work entitled 'Inner Africa laid open' [Lond. 8vo. 1852], has thrown great light on the higher and true sources of this great river, he states that "in 1802, F. H. Da Costa, superintendent of the fair or factory of Casange, sent two *pombeiros*, or native mercantile travellers, into the interior, with instructions to cross the continent, if possible, to the Zambeze. But a principal object of their mission was to endeavour to establish relations of amity and intercourse with the *muropúe*, or king of the Moluas (as they are called by the Portuguese), who was known to dwell beyond Casange, towards the NE or NNE. The starting point of the *pombeiros* was the Mucari or domain containing the factory for Casange, within a day's journey, probably, of Pungo-Andongo, in about lat. 9° 30' S, long. 15° 34' E. Nearly 14° further E, and in the same parallel, stands Lucenda, the Cazembe's capital. Between these two points we have to arrange a route of 150 days' march, made by experienced travellers, who halted often and long for rest, and whose daily route may be taken at 10 miles. In order to avoid Casange on the l., they went along the r. bank of the Quanza, which rises in Bihé, at a distance of 15 days SE, perhaps, from Pungo-Andongo. They thus came to the estates of Bomba, between the rivers Quanza and Quango, which are said to be but 7 days asunder. The titles of this chief are thus enumerated by Francesco Honorato: 'Seculo Bomba, Cambambi, Camasaca, and Mugumbo Acalunga, Ruler and Lord of all the Songo and passage to the interior.' The *pombeiros* appear to have entered the territory of Bomba, when they crossed the river Jumbo on the 12th day of their march. On the 22d, they arrived at the town of the Seculo, or, as the Portuguese would say, of Duke Bomba. At a distance of 4 days from this they came to Pepundi (?) Songo, also on a river Jumbo, and in 3 days more (29 in all) crossed the Quango. Five days beyond the Quango, the travellers crossed a desert nine or ten days in extent, to the town of Cabungi, on the frontier of the Muáta-ya-Nvo. The desert

here mentioned, in which four rivers were met with, the road going along one of them (the Quikuboe) for 3 days, extends probably over the dividing ridge between the valley of the Quango and that of the great rivers whereon lie the dominions of the Muáta ya Nvo. Nine days from Cabungi, they passed through a village forming part of the estates of Luconqueso, the queen-mother, and two days afterwards crossed the great river Casais (more probably Casézi) in a canoe. Again, in ten days, traversing another dividing ridge, marked by a two days' desert, they crossed the Lulúá also, the chief river of this region, in a canoe. In 12 days more, they arrived at the residence of the Muáta-ya-Nvo, or *muropúe*. It is to be borne in mind that from Pungo-Andongo to the abode of 'Duke Bomba,' the travellers had proceeded up the valley of the Quango, in a SE direction, that, soon after leaving this spot they turned to the NW, until they had reached the summit of the mountain-ridge which divides the waters that feed the Quango from those that fall into the Lulúá. Hence they proceeded due N, till they arrived at the capital of the *muropúe*. "Leaving the town of this chief," Mr. Cooley proceeds, "at the end of May 1806, on their way to the Cazembe, they tell us that they had the sun (rising) full on the left side, which implies a course about two point E of S; and in this course they persisted for about 37 days. The frequent mention of rain in this part of the journal (from May to September), shows that the wet season had set in. The rivers were numerous, and many of them waist deep. The chief were the Izabufgi, the Calalimo, Roando, Rova, Cazelle, the Caguirigi, crossed in a canoe; the Ren, Ropoge, and Labári, 80 yds. wide, forded on the 34th day, and where the *muropúe*'s dominion terminates. These rivers, together with other and large streams further on, to a distance of 12 days, all flow into the Lulúá." It is clear, from these facts, and the features of the country, that the Lulúá is the main stream, and its valley the cradle, of the Zaire or Congo. The real origin of this river is, therefore, to be found far to the S, instead of the N of the equator: the greater part of its course runs in a NW instead of a SW direction; nor is it until it has performed more than five-sixths of its allotted journey, and has united itself with the Quango also flowing from the SE, as well as with the northern stream hitherto regarded as the true Zaire, that it adopts that name which has been supposed to characterise it throughout. The *muropúe* appears to be a sovereign of considerable importance. On both sides of the valley of the Lulúá his empire extends to a distance of 34 days' journey, though on the W bank this measure must be taken as representing less than on the E.—At about 140 m. above its mouth, the width of the Z. contracts to from 300 to 500 yds., and it flows for about 40 m. between lofty rugged banks, over a rocky channel. Above this, it resumes a majestic breadth, varying from 1 to 8 m., and flows with a current of from 2 to 3 m. an hour, except when highly flooded. The waters of the Z. retain their freshness 13 m. to the WNW of the mouth of the stream, and their effect is perceived at 36 m. distance. Like most other rivers upon this coast, it appears to have a bar across its entrance, but with perhaps 20 fath. water upon it.

ZALISAN, or **Kong-kö-lu**, a lake of China, in the NE part of Sungan, near the frontier of the Russian gov. of Omak. It covers an area 75 m. in extreme length from E to W, and 27 m. in breadth from N to S, extending between 47° and 48° N lat., and between 88° and 86° E long. It is formed by an expansion of the Irish, and receives also the waters of the Oulasly, Kara-bouga and Bazar on

ZAKUK, the most northerly inhabited spot of the Wady-Natron in Egypt, 12 hours' march from Temneh. The road passes over the ruins of an ancient town, which have been turned up in every direction, for the sake of the nitre that abounds in the mounds of all the old towns of Egypt. On reaching the summit of the low hills that skirt the desert, the road continues upon a high plain, with a slight ascent towards the W, varied by occasional undulations, for about 20 m.: after which it descends towards the Natrun valley, the bottom of which is lower than the valley of the Nile. The village of Z., founded about 20 years since by Europeans, who established works here for the drying of the natron, now consists of about 60 huts, with a pop. of about 200. The natron is found both in the plain and in two or three of the lakes; some of the lakes contain only muriate of soda; most of the lakes contain water all the year round, and some are dried up in summer. In those lakes which contain both common salt and natron, these crystallize separately, the former above, in a layer of about 18

inches thick, and the latter beneath, in a layer of about 27 inches. All the lakes contain muriate of soda, though few produce natron. When the water of the salt and natron lakes has evaporated, a firm incrustation is left, when the natron called *sottance* is collected. The natron is of two kinds, the white and the sottance: the latter taken from the lakes, the former from the ground surrounding the lakes, and which is not inundated. The latter is of the best quality. There are several springs of fresh water in the Natrun valley, the purest of which is near the convents to the S; that of Dayr Baramoos being slightly salt. Sir Gardner Wilkinson is of opinion, that the fresh water found here and at the oases, filters beneath the mountains that separate the Wady Natrun from the Nile, and remains fresh from its not meeting with any of the salts on its passage. The process of infiltration is very slow, as the water of the lakes does not rise till three months after the rise of the Nile. The dip of the strata that borders the Natrun valley is towards the NE. Besides the population before stated of the village of Z., the four convents reckon together 72 inhabitants. The valley produces, in addition to the natron, rushes used for making the well-known mats of Egypt. The best rushes, however, those used in the mats called Menoofee, come from the valley called Wady-à-Sumar, to the SW of the Natrun valley three days' journey. Tamarisk and stunted palms, with the usual herbs of the desert, are the only vegetable productions of these valleys, besides the rushes. Gazelles, jerboas, foxes, and a few others common to the Libyan hills, are the only animals. The length of the Wady-Natron is 22 m.; its greatest breadth $5\frac{1}{2}$ from the brow of the hills, the bottom being only 2 m. The hills and the undulating banks of the Wady are covered with rounded siliceous pebbles, and pieces of petrified wood. Of the Bahr-el-Fargh, or Bahr-bila-ma ['river without water'], Sir Gardner Wilkinson is disposed to deny its ever having been a water-course; he says it has none of the characters of one, and asks what has become of the alluvial deposit which should be found, if in reality a portion of the waters of the Nile has ever flowed here.

ZAMBEZE, or **ZAMBEZI**, a river of Africa, which now appears to have its sources about the parallel of 10° S, near those of the Zaire, and also of the chief streams flowing into the great lake Nyassi, on the high land of Lobale or Lovar. The main stream flows in a prevailing SSW direction, until it has crossed the 15th parallel, shortly after which it bends round towards the SSE, between the meri-

dians of 20° and 25° E; then flows to the N of E, to its junction with the Mamutshi, in about 16° 30' S lat., and 31° E long. Below this point, at Zambo, it receives the Aranagoa, coming from the N. It then flows E by S to Tete, near which it receives a considerable stream from the N, and another from the S, after which it breaks a passage through the Lupata chain, and flowing SSE, passes Sena, and falls into the ocean by three principal deltoid streams, the Quilimane, the Cuama, and the Luaba.—Another large stream, also called the Zambezi, or Locambye, appears to rise under the parallel of 12° S, near the source of the Aranagoa branch of the river just described, and to flow in a W direction, towards the meridian of 27° E, when it bends round to NNE, and flowing past Pemba and Lucenda, discharges itself into the great lake of Nyassi, on the W bank, and under the parallel of 8° 30' S.

ZANGNANE. See **NATAL**.

ZANGUEBAR, a term which, equivalent to *Bares-Zenug*, signifies literally 'the country of the Zenug,' or 'Blacks,' vaguely applied to a large extent of the eastern coast of Africa between Mozambique and the Red sea. The inhabitants consist of Negroes, with a number of Arabs settled in the towns. The cities of Quiloa, Mombaza, Melinda, and some others, have been visited by Europeans; but the interior is entirely unknown. During the prosperity of the Portuguese, their empire extended over the greater part of this coast; but they have now been generally obliged to give place to the imam of Muscat.

ZANIESMYSHL. See **SANTOMYSL**.

ZANNONE, or **ZANONE**, an island of the Tyrrhenian sea, in the group of the Ponza islands, of which it is the most northerly, and depending upon the kingdom of Naples, in the prov. of the Terra-di-Lavoro, and district of Gaita. It is equilateral in form, elongated from N to S, and is partly volcanic and partly calcareous in structure. It is destitute of water, and desert. It formerly had a Benedict convent.

ZANOW, a town of Prussia, in the regency of Koslin, and circle of Schlawe, on the E slope of the Gallenberg. Pop. 1,278. It has several distilleries of brandy and breweries.

ZANSKAR, a division of Ladak, comprising the country lying along the two great branches of the river of the same name; and bounded by Ladak Proper on the N; by Rukchu on the E; by Lahul on the S; and by Purik and Waula on the W. The

Himalaya forms its S boundary; the Trans-Himalayan chain its N. It has an area of 3,000 sq. m., and a mean elevation of 13,154 ft. — The headwaters of the Z. river, the Yunam, the Sachu, and the Cherpa, all rise to the N of the Himalaya range. From the source of the Cherpa, in N lat. $82^{\circ} 40'$, to the town of Phadam, the distance is 130 m.; and the fall of the Z. 4,000 ft. From Phadam the stream flows due N 80 m., to its junction with the Indus opposite Nijimo. Its entire length is 210 m.; total fall, 6,000 ft.

ZANT, a village of Bavaria, in the circle of Lower Bavaria, and presidial of Kotzing. Pop. 260. It has a castle.

ZANTE, the ancient *Zacynthus*, an island of the Mediterranean, one of the Ionian group, situated 9 m. S of Cephalonia, and 15 m. W of the Morea. Its form is irregular. Its length is 25 m.; its breadth above 10 m.; and its circumference 56 m. In its aspect it is the finest of the Ionian islands, presenting, when viewed from above the town of Zante, a series of vales and eminences richly cultivated, and covered with hamlets or villages, embosomed in olive plantations. The W coast is high and cliffy. A chain of mountains extends throughout its whole length on the W side. The highest hill in the island [alt. 2,200 ft.] is called Skopo. The plain of Chierr occupies nearly half the surface of the island in the N and E parts. Z. has no large rivulets; and in summer, considerable inconvenience is experienced from the drying up of the springs and wells. Near the SE extremity of Chierr bay is an extensive morass. The whole surface of the island presents the traces of subterraneous fire, discovered in some parts by warm sulphureous springs, and occasionally by the occurrence of earthquakes; springs of petroleum and mineral tar, known in the days of Herodotus, are still worked to advantage. The coast in many places forms recesses, answering, in some degree, the purpose of harbours. The climate, though extremely hot in summer, is not unwholesome, nor so variable as that of the other Ionian islands. Snow never lies except on the mountain-tops. The winds generally blow from NW and N in spring and summer. The chief products of Zante are currants, olives, and other fruits of a warm latitude. Currants have long formed a great article of export to England and Holland; and the extent of ground occupied by their cultivation exceeds 6,500 acres. Of olive oil, the annual produce is fully 32,000 barrels, of about 180 lbs each. On the other hand, the corn raised is hardly equal to four months' consumption; and the deficiency is supplied by imports from the Morea, whither the peasantry of Z. resort in the harvest to the number of 4,000 or 5,000, receiving payment for their labour in corn, of which they bring back with them on an average, not less than 50,000 bushels. Cotton and silk are cultivated to a small extent; pasturage is very scanty, in consequence of the droughts of summer. Goats are the only live-stock. The soil of this island being so fertile, the pop. is much more dense than in other parts of Greece. The total in 1861 was 39,103. Of these above 18,000 reside in the town of Zante; the rest in villages, hamlets, and scattered habitations, many of which are pleasantly situated along the coast. The language of the town, for the purpose of intercourse with foreigners, is Italian; but the current language is Greek. The island fell into the hands of the British in October 1809.

ZANTE, the capital of the foregoing island, is situated on the SE coast, about 12 m. W of Cape Tornese in the Morea, at the bottom of a small bay, and on a hill of gentle declivity, descending in an almost imperceptible slope to the surface of the sea. In its

appearance, Z. resembles an Italian town. The principal street, which traverses it in its whole length, is broad and handsome: it is bordered with well built houses and churches, some supported by colonades, others provided with piazzas. It has likewise the advantage, so rare on the continent, of a foot-pavement. The market-place, situated near the sea, is spacious and well laid out. The houses are built partly of brick, partly of wood; and, on account of the frequency of earthquakes, seldom exceed one or two stories in height: the last visitation of this kind, in 1820, overthrew several hundred houses, without, however, causing a loss of lives. Z. partakes of the character of a commercial town, comfort being more studied than elegance, and there being no public amusements except billiards, and occasionally a theatrical representation by Italian players. Of the churches, several are well built, but none particularly striking. The harbour is capacious.

ZANTKAU, a village of Prussia, in the regency of Breslau, and circle of Trebnitz. Pop. 260. It has a castle.

ZANTOCH, a village of Prussia, in the regency of Frankfurt, and circle of Landsberg. Pop. 868. — Also a village of the regency of Breslau, and circle of Dels. Pop. 278.

ZANZHAUSEN, a village of Prussia, in the prov. of Brandenburg, regency of Frankfurt, circle and 11 m. NE of Landsberg, on the Zause. Pop. 555. It has extensive iron-works.

ZANZIBAR, an island in the Indian ocean, situated off the E coast of Africa, between the 6th and 7th parallels of S lat. It is nearly 50 m. in length, and 20 m. in breadth; and is distant from the continent, along which it stretches in a NE direction, about 45 m. Between the continent and it there is, however, no navigable passage for large vessels, except through the harbour, as a reef runs obliquely across from the African shore to the small islands which lie close to the W side of Zanzibar. The appearance of the island is extremely delightful; and the climate is similar to that of India, only the monsoon, or rainy season, sets in sooner. The town is situated on the W side of the island, and is both large and populous. The sovereignty of the island belongs to the imam of Muscat, who appoints the *haikim*, or governor, and to whom the revenue derived from its commerce and land tenure devolves. The imam maintains no kind of military force; but the *haikim's* slaves, amounting to 400 or 500 men, are armed, and serve as soldiers under three Arab officers. The population of the island may be estimated at 200,000, three-fourths of whom are slaves. The principal articles of export are slaves and ivory, with a small quantity of drugs; the number of slaves annually sent to Muscat, India, and elsewhere, is estimated at not less than from 6 to 10,000. The imports are chiefly from India and the neighbouring coast of Africa, and are of considerable importance; judging from the amount of customs, their value cannot be under 300,000 dollars annually. The foreign commerce of Zanzibar is considerable, and almost entirely in the hands of the Americans and English. The American trade bears to the English a proportion of five to one, and to that of any other nation, about twenty to one. The American business is generally held by the merchants of Salem. The imports from the United States, are domestic cottons, and various other manufactured goods, as ammunition, household furniture, &c. By a late treaty between the sultan of Muscat and the United States, these imports are introduced subject to five per cent. duty, while exports in American ships are freed of the five per cent. duty imposed on

those conveyed in the ships of other nations. As in most eastern countries, however, the sultan farms out the customs for a specific sum—here 150,000 dollars per annum.—The cap. of the island is situated on a sandy peninsula projecting from its W side, in S lat. 6° 10'. It is a miserably built place, with a pop. of perhaps 25,000. On the SW side of the island is another considerable town.

ZANZIN, a village of Prussia, in the regency of Frankfurt, and circle of Landsberg. Pop. 584.

ZANZTHAL, a village of Prussia, in the regency of Frankfurt, and circle of Landsberg. Pop. 425.

ZAPADNAIA, a town of Russia in Europe, in the gov. of the Don Cossacks, 33 m. E of Tcherkask.

ZAPARA, an island off the N coast of Venezuela, in the dep. of Salia, and prov. of Coro, on the S part of the gulf of Maracaibo, 30 m. N of the lake of that name. It is about 15 m. in length from E to W.

ZAPARDIEL, a river of Spain, which has its source in the prov. and to the NW of Avila, traverses the N part of that prov. and the S of that of Valladolid, and after a course in a generally S direction of about 75 m., joins the Duero on the l. bank, 3 m. WSW of Tordesillas. Its waters are sluggish and impure, but abound with fish, and its banks unhealthy.

ZAPATERA, an island in the lake of Nicaragua, in Central America. It is mountainous, rising to a height of nearly 2,000 ft.; and is the largest in the lake, but is uninhabited. Squiers thus describes the islands of this lake generally, and that of Z. in particular. Perhaps a more singular group of islets cannot be found. They are all of volcanic origin, generally conical in shape, and seldom exceeding three or four acres in area. "All are covered with a cloak of verdure; but nature is not always successful in hiding the black rocks which start out in places, as if in disdain of all concealment, and look frowningly down in the clear water, giving an air of wildness to the otherwise soft and quiet scenery of the islands. Trailing over these rocks, and dropping in festoons from the over-hanging trees, their long plant tendrils floating in the water, are innumerable vines, with bright and fragrant flowers of red and yellow, mingled with the inverted cone of the 'gloria de Nicaragua,' with its overpowering odour, with strange and nameless fruits, forming an evergreen roof so dense that even a tropical sun cannot penetrate. Many of these islands have patches of cultivated ground, and on such, generally crowning their summits, relieved by a dense green background of plantations, and surrounded by kingly palms and the papaya with its great, golden fruit, are the picturesque cane huts of the inhabitants. Groups of naked, swarthy children in front,—a winding path leading beneath the great trees down to the water's edge,—an arbour-like miniature harbour, with a canoe lashed to the shore,—a woman naked to the waist with a purple skirt of true Tyrian dye (for the famous *murex* is found on the Pacific shores of Nicaragua), her long, black, glossy hair falling over neck and breast, reaching almost to her knees,—a flock of noisy parrots in a congressional squabble among the trees,—a swarm of parrots scarcely less noisy,—a pair of vociferating macaws like floating fragments of a rainbow, inquisitive monkeys hanging among the vines,—active iguanas scrambling up the banks,—long-necked and long-legged cranes in deep soliloquy at the edge of the water, their white bodies standing out in

strong relief against a background of rock and verdure,—a canoe glancing rapidly and noiselessly across a vista of water,—all this, with a golden sky above, the purple sides of the volcano of Momobacho overshadowing us, and the distant shores of Chontales molten in the slanting sunlight,—these were some of the elements of the scenery of the islands—elements constantly shifting, and forming new and pleasing combinations." After toiling for a long time, Mr. Squiers continues, "we came suddenly upon the edge of an ancient crater of great depth, at the bottom of which was a lake of a yellowish green or sulphurous colour, the water of which Manuel assured me was salt. This is probably the fact, but I question much if any human being ever ventured down its rocky and precipitous sides. Manuel now seemed to recognize his position; and turning sharp to the left, we soon came to a broad level area, covered with immense trees, and with a thick undergrowth of grass and bushes. There were here some large, regular mounds composed of stones, which I soon discovered were artificial. Around these Manuel said the *freyles* were scattered, and he commenced cutting right and left with his machete. I followed his example, and had not proceeded more than five steps, when I came upon an elaborately sculptured statue, still standing erect. It was about the size of the smaller one discovered at Pensacola, but was less injured, and the face had a mild and benignant aspect. It seemed to smile on me as I tore aside the bushes which covered it, and appeared almost ready to speak. In clearing further I found another fallen figure, but a few feet distant. The first monument which claimed our attention was a well-cut figure, seated crouching on the top of a high ornamented pedestal. The hands were crossed below the knees, the head bent forward, and the eyes widely opened as if gazing upon some object on the ground before it. A conical mass of stone rose from between the shoulders, having the appearance of a conical cap when viewed from the front. It was cut with great boldness and freedom, from a block of basalt, and had suffered very little from the lapse of time. It is impossible, without engravings and plans, to give any clear comprehension of these monuments, and I shall not attempt a detailed account of them. They are very different from those discovered by Mr. Stephens at Copan. Instead of the heavy and incongruous mass of ornament with which those were loaded, most of these are simple and severe,—and though not always elaborately finished, are cut with great freedom and skill. There is no attempt at drapery in any of the figures. Some are erect, others seated, and still others are in crouching or reclining postures. The material, in every case, is a black basalt. A few of the figures, from defects of the stone, have suffered somewhat from the weather, but less from this cause than from the fanaticism of the conquerors. They all bear marks of the heavy sledges, or other instruments, with which the Catholic zealots endeavoured to destroy them; but the task was not an easy one, and fortunately for the archaeologist, the massive stones resisted their assaults."

ZAPATOSA, a lake of New Granada, in the dep. of the Magdalena, and prov. of Mompo. It is formed by the Cesare, an affluent of the Magdalena, to the E of the river of that name, and of Mompo. It is about 30 m. in length from E to W, and 27 m. in breadth.

ZARA, a circle of Austria, in Dalmatia, bounded on the N by Slavonia, on the E by Turkey in Europe, on the S by the circle of Spalatro, and on the W by the Adriatic. It is formed from the ancient county of Zara or Kotar, Bukovizza, the counties of Sebenico, Knin, and Nona, the territory of Novi-grad, the islands of Pago and Arba, and some others of smaller extent, comprising a total area of 840 sq. m. Pop. in 1839, 137,510. See also DALMATIA.

ZARA, or ZARDRU, a town of Austria, capital of the kingdom or ldgh. of Dalmatia, and of the circle of the same name, 180 m. SE of Venice, and 321 m. S of Vienna, on the Adriatic, opposite the island of Uglian, from which it is separated by a strait of the same name, in N lat. 44° 6' 51", and E long. 15° 13' 38". Pop. in 1843, 6,850. It is situated on a tongue of land, separated from the continent by a deep ditch, crossed by a bridge, and is fortified. It is well built, and contains a cathedral, Catholic gymnasium, a lyceum, an archiepiscopal seminary, a maritime hospital, several schools, and a theatre. It has manufactories of silk and woollen fabrics, and tanneries; and is noted for its manufactory of *maraschino*, a liqueur made from the *marasca*, or black cherry, which is grown mostly in the neighbourhood of Almissa, between Spalato and Macarsca. Bordeaux is not more famous for its wines than Z. for its liqueurs. There are, altogether, about a dozen distilleries in the town. Its trade consists chiefly in wine and figs. Z. is destitute of springs of water, and receives its only supply by means of cisterns. It has the remains of a Roman aqueduct. The port is spacious, but wanting in depth, and open to the N wind, which here frequently blows with great violence.

ZEBID, a town of Arabia, in Yemen, in the district of Tehama, 21 m. S of Beit-el-Fakh, and 105 m. SW of Sana, near the greatest and most fertile valley of the Tehama, and about 15 m. from the shore of the Arabian gulf. The valley during the rainy season receives so large a body of water from the adjacent mountains, as to become the bed of a great river, named also Zebid. The town is enclosed by low walls, and had formerly three gates, two of which were destroyed by inundations. The wall describes a considerable circuit, but scarcely a half of the enclosure is now occupied by the town. It contains numerous mosques, an academy for the instruction of youth of the Sunnite sect in the sciences cultivated by Mahomedans, and possesses important manufactories of silk and cotton fabrics. The houses are built of a dark coloured brick, but with great irregularity, and with few interior means of comfort. The use of glass in casements is almost unknown, and the only local substitute fish-

skin renders the habitations gloomy in the extreme. This town was formerly the most commercial in the Tehama, but the port of Ghalef'ka having become unfit for use, the commerce to which Z. formerly owed its prosperity has passed to Mocha, Hodeida, Lohela, and Beit-el-Fakih. The pop. is at present about 7,000.

ZEBU, an island of the Philippine archipelago, between the island of Negros on the W, and those of Leyte and Bohol on the E, and of Mindanao on the S, extending between 9° 25' and 11° N. It is about 60 m. in length from NNE to SSW; but is comparatively narrow, not exceeding 240 m. in circumference. Pop. 170,000. It is generally mountainous, but is well watered, and is in many parts extremely fertile, producing tobacco, cotton, flax, and a species of grain named barona. The forests afford ebony and several kinds of dyewood, and gold is found in some of the rivers. Birds' nests form one of its chief articles of trade. The inhabitants, who are chiefly Bissayas, are enterprising, active, and industrious. This island, which was discovered by Magellan in 1521, was the first of the Philippines of which the Spaniards rendered themselves masters. The Chinese, who had long been established in the island, united with the aborigines in their efforts to resist the Spaniards, and it was not until the 27th attempt of the latter to make good their footing on its shores, that they achieved success.—The town, also called Zebu, is situated on the E coast of the island. Pop. 25,000. It is the residence of a Spanish governor, and has an earthen fort and good harbour. Magellan here lost his life by the hand of the king of Zebu.

ZEEKOE, a river of South Africa, in the district of Graaff-Reynet, which has its source in Compass mountain, a summit of the Sneeuw-Berg or Snow mountains; runs N and NE, after a course of about 150 m.; joins the Nu-gariet, Black or Cradock river, on the l. bank, and on the confines of Hotentotia.

ZEELAND, a province of Holland, lying between

51° 14' and 51° 45' N lat., and between 3° 13' and 4° 7' E long., and bounded on the N by the arm of the Maas, distinguished by the names Krammer and Grevelingen, by which it is separated from Holland; on the E by the prov. of North Brabant, and by Belgium; on the S and SW by Belgium; and on the W by the North sea. It is 42 m. in length from N to S, and nearly equal in breadth, and comprises a total area of 225 sq. m. The S part, improperly distinguished as the island of Cassandria, taken from Dutch Flanders, belongs to the continent, its isolation being merely by canals. Z., properly so called, consists of islands formed by two main and several minor arms of the Schelde, arms of the Maas and the North sea, viz. North and South Beveland and Walcheren on the S, and Tholen, Duiveland, and Schouwen on the N. The surface, with the exception of some small parts of the islands of Walcheren and Schouwen, where the sea has thrown up sand banks or downs, locally named *tarpen*, is level throughout, and lies so low as to require for its defence against inundation large dykes, which run along the coast and the sides of rivers, and are kept up at great labour and expense. These dykes are from 20 to 30 yds. in breadth at the bottom, and of sufficient width at the top for two carriages to pass abreast. Yet different parts of this prov. have at times been exposed to heavy calamities by the sea breaking over the dykes in storms at high tides, particularly in 1802, 1809, 1522, 1532, and 1548. In these catastrophes whole towns and districts have been overflowed and abandoned; and though part of them have been subsequently recovered, several islands have undergone a permanent reduction; in particular, that of Schouwen, which is said to have once been 60 m. in circumference, has now only 25. In the river Scheldt, between the towns of Bergen-op-Zoom and Antwerp, there exist on both sides large tracts of land, to the extent of several miles, which at high water are covered by the sea, and at low water present a varying surface of several feet in depth of the richest alluvial soil, ever on the increase by the daily action of the tides. To redeem and dispose of this valuable land, a company has been formed, and the necessary powers granted by a concession for 99 years, under which the company may recover and enclose land to the extent of 35,000 acres, the line of operation marked out being almost identical with that planned by the Emperor Napoleon for the same design. The reclamation of the land will cost £20 per acre; the land reclaimed, judging from the price realized for adjacent plots similarly recovered, will be worth from £80 to £70 per acre. Indeed, the alluvial deposits in this province of Zeeland are of so peculiarly rich and valuable a quality that it is affirmed by competent judges such lands will bear crops for 20 years in succession without the application of manure. The 3,000 acres first enclosed are formed of alluvial deposits, of which the lowest parts are about 8 ft. above the level of low tide. The soil of Z. is a rich black mould, excellent for pasturage and the culture of such crops as madder, flax, and cole seed, which require a very heavy soil. Wheat is raised chiefly in South Beveland, and madder in large quantities in the island of Schouwen. The climate is damp and variable. To foreigners it is productive of bilious complaints and agues, as was so severely experienced by our troops in 1809, and affects even the health and longevity of the natives. Frost and snow are of less frequent occurrence than on the continent. The principal productions are cattle, fowls, game, fish, grain, fruit, legumes, melons, potatoes, flax, rape-seed, madder, and mulberries. The sheep are small, and the wool

inferior in quality. The horses are strong, but ill-made. The manufacturing industry of the prov. consists chiefly in the production of fine yarn, and some species of linen and woollen fabrics, oil, and gin. The trade is considerable, the exports consisting chiefly in articles of local production.—The Zealanders on the islands are strictly Dutch; on the mainland they are a mixture of Dutch and Flemings. They resemble the inhabitants of the rest of the United Provinces, in their industry, perseverance, and phlegmatic tendencies, and are remarkable for their adherence to the ancient manners and customs. The men, when in full costume, wear short velvet jackets with waistcoats, and amplitudinous trousers of the same material, bound round the waist with a girdle whose buckle, or buckles, is generally of pure silver. The head-dress is a black cap, or loose hat, producing very much the effect of the Andalusian cap. The faces of the women are intelligent, and many of them are well-looking; their forms being the very reverse of that which we understand by the term Dutch-built. In full dress, they have slips of striped velvet, or silk, or stuff, with bodices of silk or velvet, and a sort of neckerchief of many-coloured ribands run together. But their great glory is the singular but effective gold or gilt plates, prominent just where the ear meets the forehead; some of these hang other plates, and from these, again, all sorts of trinkets; a few may be observed with, in addition, a broad plate or band of gold, altogether covering the forehead between the two plates first described, very like the antique Egyptian forehead decoration. They wear silver and gold brooches at the neck, and at the waist, and huge plates of the same on the shoes.—This prov. sends three deputies to the states general. Its provincial states consist of 44 members, of whom six are for the knights, 20 for the towns, and 18 for the country. It is divided into three arrond., viz. Goes, Middelburg, and Zierikzee. Its capital is Middelburg. The general aspect of the country seems to have been singularly changed by the action of its waters since the period of Roman domination, when the mouths of the Schelde and Maas were occupied by the Caninefates. After numerous vicissitudes, Z. passed under the domination of Spain, but was one of the provinces which shook off the yoke of Philip II. in the 16th century. Till 1798, it formed one of the United Provinces. In 1810, it was united to the French empire, and became the dep. of the Bouches-de-l'Escaut, and was finally attached to Holland at the close of the revolution of 1830.

ZIGUNES, ZIGUNEL, or BOHEMIANS, a nomade people who are found in almost every part of Europe, in the W of Asia, and N of Africa. Their history is still a matter of doubt; but the most probable opinion is that they are of Hindostani origin. On some authorities, they are descended from the *Sigynæz*, a people, according to Herodotus, settled near the Gæta and Thracians. By some they are traced to Egypt, and hence derive the name *Gipsy*, by which they are commonly known in England, and that of *Pharao*, their common appellation in Hungary, where they are also named *Tzigany*. By the Greeks they are named *Athungæ*; by the Wallachians and Moldavians, *Cyngani*; by the Italians, *Zingari* or *Zingheri*; and by the Dutch, *Heiden*. In Syria, and by the Turks, they are called *Tzynganes* or *Tzyngenes*; in Syria, *Masbul*; in Bokhara, *Dugli*; in Barbary, *Stambura*; amongst the Arabs, *Courbad*; and in Egypt, *Ghaik*. By themselves they are named *Roma*, *Sade*, and *Mulle-Tcheh*. Their number in Europe is estimated at 340,000, of whom 50,000 are in Austria; 150,000 in Turkey; 10,000 in France; 20,000 in England; and 20,000 in Russia. The independent and vagabond life led by the Z. the misery and degradation of their condition, seem to ally this people with the Gitanos of Spain, a tribe, however, with which they cannot properly be identified.

ZIMMAY, a petty state of India, lying to the N of the Tenasserim provinces, on the E bank of the Salween, inhabited by a wild, barbarous, but independent tribe of mountaineers called Red Kayens. The town of Zimmay, or Changmai, is situated in N lat. 20° , and E long. about 99° . A town called Labong is distant from it only 10 m. SE; and another called Lagon about 50 m. SE. These three towns are respectively the capitals of three small states of the same name, our information respecting which has been chiefly gleaned by Dr. D. Richardson, who visited them in 1830. Their respective boundaries are not well defined, but, together with those of Mung-pay and Mung-nam, they appear to be the patrimony of one family, who, when the whole of this country was under the dominion of Ava, succeeded, with the assistance of Siam, in throwing off the Burmese yoke, ejected the latter from the above named towns, and having been confirmed in the government of them by Siam, have continued tributary to that kingdom, and successfully resisted all the attempts of Ava to regain possession. The elder brother was invested with the title of *Chow-tsee-Weet*, or 'Lord of Life,' with the supreme authority over the others, and the title descended to each brother successively alive. Recent revolutions have probably altered the relations of these petty states. Of the original inhabitants of this country but a very small portion—perhaps not above one-third of the whole—now remains in the territory, owing to the great number carried off by the kings of Ava when they overran the country. The remainder consists chiefly of Burmese, Peguers and Shans, either refugees or slaves. Dr. Richardson was unable to form an opinion as to the amount of the pop. He was told that the towns of Zimmay, Lagon, Mung-pay and Mung-nam contain each about 20,000, and Labong 14,000, but he thinks these numbers exaggerated. In person the Shans bear a great resemblance to their Burmese and Siamese neighbours, though somewhat fairer. They are muscular, well-formed, and healthy in their appearance: eyes moderately linear; nose small rather than flat; the mouth large, and disfigured by black teeth and gums, which they cherish as a beauty; the hair is long, straight, lank, and almost always black. They tatoo the lower limbs, but to less extent than the Burmese. Their dress consists of a cotton *putso* or cloth round the loins, generally blue, a blue cotton jacket reaching well over the hips, and a coarse red cotton turban; though many go uncovered. The dress of the chiefs is of the same description, but the materials are more costly,—Chinese crape or satin jackets, with gold or silver lace, the *putso* of silk. The women are fair and good-looking. Many are disfigured with goitre, but it seldom attains a large size. They are a quiet, mild, good-humoured race. Their religion is that of Budh. Speaking of the soil and cultivation, Dr. Richardson says—"The soil in the low paddy and garden lands is a rich black loam apparently inexhaustible, in which the crops follow each other in

uninterrupted succession. Cultivation is conducted with a good deal of care by irrigation and transplanting, and the return on good lands is about 120 and on inferior about 75 fold. The general seed-time is in July and August, and the harvest in December and January, though some descriptions of paddy are perfected in three months. Their plough closely resembles those used in the south of Scotland without the coulter or ploughshare, and is often drawn by one buffalo. The principal articles of cultivation are the cauth-brier, or glutinous rice, cotton, maize, sugar-cane, tobacco, ground nut, chillies, several kinds of pulse, radishes, and turnips. Of grain, wheat, and other corn they have none. Pepper, cloves, and all the finer species of spices are unknown." Tin, iron, and lead ores appear to be abundant, though it does not appear that the extraction of the metal is engaged in to any extent. Dr. R. was informed that the tin ore yields 80 per cent., and some iron ore that was shown him seemed equally rich. There are extensive teak forests in that part of the country immediately adjoining our provinces, but there is difficulty in bringing the timber down the Salween river in consequence of rocks and rapids. The trade of the country is unimportant. An annual caravan visits it from the frontier provinces of China, bringing silks, satins, velvet and woollens, (the latter chiefly English,) cooking vessels, musk, and trifling articles of Chinese manufacture; and carrying away chiefly raw cotton, the produce of the country. From Maulmein are received British piece goods, chintzes, muslins, hardware, &c., in return for cattle, ivory, and a small quantity of stick-lac. With the hill tribes on the W bank of the Salween they exchange cattle, grain and betelnut, for slaves, tin, lead, and stick-lac.—The walls of the inner town of Zimmay are 800 fathoms from E to W, and 1,000 from N to S; all of brick, with a ditch and rampart all round. The outer wall, which reaches from the NE to the SW corner, is circular and upwards of 1,800 fathoms, one-half of brick, the other of wood with a rampart round the brick part, and a ditch surrounding the whole. The ditches when in repair can be filled from the river. The town is situated 4 or 5 m. from the eastern foot of the Bya-tha-Dyk hill, the highest in the range, and between it and the hill is another small single-walled fort about the size of Labong, called Mung-Sun-dank. All the houses in Zimmay above the poorest of the people are surrounded by compounds fenced in, in which are cocoa-nut, areca, betel, bamboo, and other useful trees, with a great variety of flowers and flowering shrubs, which are watered by a stream of clear water brought from the hill. The valley in which this town and Labong both stand, is little less than one day from E to W, and little more than three from N to S. Much of the valley near the town is under cultivation, which is all prepared by irrigation, and the grain is transplanted, yielding upwards of one hundred-fold, though the fields are never left fallow. At Zimmay Dr. R. found a caravan of Chinese traders, consisting of 200 mules and horses. Three hundred more were said to be at Mung-nam, where cotton is abundant. They had arrived in the country a considerable time before, and were preparing shortly to return home. The imports by these caravans consist of copper and iron vessels, silk, (raw and manufactured,) satins, gold and silver thread and lace, musk, walnuts, carpets, and vermilion. They export from the Shan country cotton, ivory, skins, horns, &c. From the information which Dr. R. could collect, the caravan assembled at Mungku, distant from Zimmay about two months' journey. Their goods are conveyed by mules, and they would appear to

travel rapidly; as they asserted they would not be more than 12 days from Zimmay to Maulmein.

ZIPS, or **SZEPES-VAHMEGYE**, an administrative province and comitat of Hungary, in the circle beyond the Theiss, bounded on the N by Galicia; on E by the comitat of Szaros; on the S by those of Abauj, Torna, and Gomor; and on the W by the comitat of Lyptau. It is 69 m. in length from NW to SE, and 24 m. in medium breadth, comprising an area of 562 sq. m. Pop. in 1837, 224,510, of whom

the majority are Slaves. This comitat may be regarded as the Switzerland of Hungary, being to a great extent covered by the Carpathian mountains, which here form the northern boundary with Poland, and reach their highest point in the vast Tatra group, the lowest of which rises nearly 7,000 ft. above the level of the sea. "These granite giants, though unadorned by nature's varied tapestry, still, with their snow-clad peaks, rugged perpendicular cliffs, unfathomable precipices and roaring cataracts, vie with the most majestic Alpine scenery, unfolding to the beholder a picture of wild beauty and stern grandeur that at the same time awes and delights." The central part is watered by the Poprad, the S by the Hernad and Gómbitz. The N confines are for some distance traced by the Dunajec. The climate is cold, unsuited to the culture of the vine, but the soil yields barley, flax, pulse, fruit, timber, and in small quantities grain. Cattle, sheep, pigs, and fowls are reared extensively, and game and bees are found in large quantities in woods, and fish abound in the streams. The comitat is noted for the variety and abundance of its mineral wealth. It has mines of gold and silver, copper, and iron, and vitriolic springs. Brandy, linen, pottery, and leather, are its chief articles of manufacture. The com. of Z. comprises 38 towns, two of which are royal, and 175 villages, one of which bears the same name. These towns form a district independent of the jurisdiction of the comitat, and enjoy several privileges, amongst others that of being governed by a count of their own election. The chief town is Leutschau. The village of Z. is near Kirchdorf. It contains the fine ruins of an ancient royal castle of the same name. "The Zipserers are an enduring and vigorous race of people, honest and simple in their habits, and remarkable alike for their general mental culture and ardent attachment to liberty and the Protestant faith. Of this they gave countless proofs amidst the vicissitudes their country was subjected to under the Austrian rule. Their devotion, however, reached its height during the memorable period of 1848, when they placed their savings at the disposal of the national government, and sent thousands of their bravest sons to the plains on the banks of the Theiss against the Austrian and Russian invaders. Hungarians in heart and from conviction, the Zipserers were so deeply affected by the tragic conclusion of the war, that, when the remnant of their gallant bands returned to their mountain fastnesses and related the terrible tidings of their country's downfall, their despair knew no bounds."

ZIPSENDORF, a village of Prussia, in the regency of Merseburg, and circle of Zeitz. Pop. 330.

ZITATE, or **CITATE**, a village of Wallachia, near the l. bank of the Danube, and 10 m. NNE of Widdin. It stands on the brow of a hill which overlooks the surrounding plain for many miles, and is flanked on two sides by ravines. That towards the E is of considerable depth, broken and *escarpé*, and shelving at the bottom into a lake, beyond which a plain extends to the Danube at a little distance; the other is less formidable, and winds towards the top of the hill in the rear of the village, forming a sort of hollow or covered way, which can be traversed from one end to the other without difficulty. The village, like all those of Wallachia and Bulgaria, is composed of scattered houses, all open and unprotected, except by slight fences, designed to secure the corn and hay. The road from Kalafat towards Saltsha, Gruja, and Tschernetz, passes through the centre in a NW direction, after having ascended between the ravines. A hard-fought battle took place in the neighbourhood of this village in the late war with Russia, on the fruitful and picturesque plain which extends W, in a SW direction from Radovan to Ciocoin, and thence to Z.; and from the latter place N to Plenizza.

ZITTANG, **SETANG**, or **PAULAN**, a river of Burmah, a branch of the Irawady, from which it separates in the Mranma, between Ava and Ummerapura; runs first SE; then SW and S; and falls at a little below a town of the same name, into the gulf of Martaban, to the E of Rangoon, and NW of Thaleayn. It is navigable to Taungu, a distance of 180 m. from its mouth. The latter is much obstructed with sand-banks, and is liable to sudden swelling of the waters. The Z. has a total course of about 480 m. At Graungree, where it forms a lake, it communicates by the Mobia with the Thauluyn.

ZITTAU, a town of Saxony, in the circle and 29 m. SE of Bautzen, on the Altwasser and Mandau, an affluent of the Niesse. Pop. in 1837, 8,674; in 1843, 9,268; in 1852, 11,000. ZOHAB, a town and district of Asia, the political relations of which are matter of dispute between the governments of Turkey and Persia. The district is bounded on the NW by the river Diyalah; on the E by the mountain-range of Zagros; and on the S by the river Holwan. The soil is rich, and where irrigated extremely fertile in rice and corn, which is principally disposed of to traders from Bagdad. The town, which lies about 100 m. NE of Bagdad, from its frontier position between Turkey and Persia, is exposed to constant spoliation, and in 1836 was a mass of ruins, with scarcely 200 inhabited houses. Immediately overhanging the town to the E, is the fortress of Bân-Zardah, or Kalabi-Yezdijird, the stronghold of Holwân, to which Yezdijird, the last of the Sasanian kings, retreated after the capture of Ctesiphon by the Arabs. It is a noble specimen of the labour which the monarchs of those ages bestowed upon their royal buildings. It is formed by a shoulder projecting westward from the mountain of Dâlâhâ, girt upon three sides by an inaccessible scarp, and defended upon the other, where alone it admits of attack, by a wall and dry ditch of colossal dimensions, drawn right across from one scarp to

the other, a distance of above 2 m. The wall is now in ruins, and the debris has fallen down into the ditch at its foot, but it still presents a line of defence of no ordinary description. It is flanked by bastions at regular intervals, and it would seem to have been about 50 ft. in height and 20 ft. in thickness; the edge of the scarp has also been faced all round with a wall of less dimensions. The hill itself is elevated very considerably above the plain of Z., perhaps 2,000 ft.: the slope from the plain is abrupt, and it is everywhere crowned by a scarp varying from 300 to 500 ft. The N side of the hill is higher than the S, and the table-land of the fort, containing about 10 sq. m., presents an inclined surface throughout. At the NE angle, where the scarp rises in a rocky ridge to its highest point, and joins the mountain of Dáláhdú, there is a pass which conducts into the fort, the ascent rising gradually along the shoulder; the whole way from the town of Z. is easy enough, but the descent on the other side into the table-land of the fort is by a precipitous and difficult gorge. A straight line drawn from Mount Ararat to the mouth of the Tigris will fall in pretty well with the frontier boundary of Turkey and Persia, as it is at present laid down in our maps, and as it has remained from the time of Nadir Shah to the present day. About the northern half of this line there is no dispute. Zohab, one of the disputed districts, falls about its middle; and about half of the southern part of the same line will pass through the disputed district of Mohamran. According to the decision of the conferences at Erzerum, Zohab was assigned to the Turks, and Mohamran to the Persians. The district of Mohamran has an extensive littoral upon the Persian gulf, stretching from the mouth of the Tigris towards Bushire, and a convenient port near the river's mouth. The Turks lay much more store by Mohamran than Zohab, a territory comparatively fruitless to them by the intractable nature of the Kurdish tribes which inhabit it, and from which tribute can only be extracted at the sword's point.

ZUG, a canton of the Swiss confederation, situated between 47° 5' and 47° 18' N lat., and between 8° 24' and 8° 39' E long., bounded by the canton of Zurich—from which it is separated by the Sihl—on the N; by Schwytz—from which for several leagues it is divided by Lake Zug, the line of demarcation from which in its entire length is described by the Reuss—on the E and W; and by Lucerne and Aargau on the S. It comprises an area 14 m. in length from E to W, and 9 m. in extreme breadth, and is, next to Geneva, the smallest canton in Switzerland. Pop. in 1837, 15,322, of whom 14,193 were citizens of the cant., 1,019 those of other cantons, and 110 strangers. Pop. in 1850, 17,461, of whom 17,346 were Catholics. The German language is that commonly spoken. Towards the NW this cant. consists chiefly of plains. The Zugerberg rises to the S of Lake Zug, and in the SE are several mountain-ranges. Except on the E frontier, traversed by the Limmat, this cant. is comprised entirely within the basin of the Reuss. It contains the greater part of the lake of the same name, and the whole of that of Egeri. Its principal rivers are the Reuss and Sihl, on the E and W frontiers; and, in the interior, the Lörze, an efflux from Lake Egeri, and affluent of Lake Zug, and ultimately the Reuss. The climate is mild, especially in the vicinity of the lake. The soil is fertile, producing grain, fruit, cider, and in considerable quantity, but inferior in quality, wine. Butter and cheese are among the most important agricultural productions. The manufactures consist chiefly in paper leather, and floss-silk. Cattle, timber, kirchwasser, cider, chestnuts, fruit, and butter, are the chief articles of trade. A small school at Zug, and a Latin school at Zaar, are its only educational establishments. The cant. of Z. ranks eighth in the order of the Helvetic confederation. Its contingent for the federal army is 456 men, and 16 horses, and 2,295 francs in silver. Its receipts in 1843 amounted to 90,000 francs. It depends upon the diocese of Coire, and has an Episcopal commission. It is a democratic republic, the citizens of which enjoy political privileges, and are all soldiers on attaining the age of 19. In 1837 the number of active citizens was estimated at 3,500. The sovereignty belongs to the people, and is exercised either directly in the national, or in the communal assemblies, or by representatives forming the councils or constituted bodies. The *landgemeinde*, or National Assembly, meets once a-year to receive the reports of the administrators of public affairs, and to appoint the public functionaries. The chief of these, the *vorgesetzter*, is named for life. He presides at the *landgemeinde*, and is assisted in the exercise of the executive power by the *kantonsrath*, or council of the canton, of which also he is president. This council consists of the *vorgesetzter* and 54 members elected for two years by the communal assemblies, with liberty to represent their respective localities rather than the country generally. The legislative power, and the right of electing deputies

to the dist. were delegated by the constitution in 1814 to the *landrath*, or council of the country, consisting of a number triple to that of the *kantonrath*, and hence called the great or triple council, and which meets three times a year. The cant. is divided into two amts.,—viz., the innere-amt, containing 6 communes, and the aussere-amt, which comprises 5.—The chief town, which bears the same name, is on the E bank of the lake of the same name, at the foot of the Zugerberg, and 17 m. S of Zurich, in N lat. 47° 9', and E long. 8° 35', at an alt. of 1,443 ft. above sea-level. Pop. 3,302. This town, which was founded in the 15th century, still preserves some of its ancient fortifications, and its massive walls and towers. It is well and regularly built, and has an ancient cathedral, in which are the tombs of the Zurmanben family, a capuchin convent, a gymnasium, a public library, an arsenal, and a poor's-house. It has manufactories of paper and of leather, and carries on an active trade in cattle, wood, kirchwasser, ciders, chestnuts, and dried fruit. In 1435 two of the estates sunk into the lake, and in 1594 several houses shared the same fate. In 1795 it suffered extensively by fire.

ZUG (LAKE OF), a lake of Switzerland, divided into two parts by an angle formed near its centre by the cant. of Lucerne, the northern of which is comprised in the cant. of the same name, and the southern in that of Schwytz. It is connected with the basin of the Rhine, or of its affluents, by the Lorze, Reuss, and Aa, and is bordered on the E and S by the Zugerberg and Righi mountains. It is 12 m. in length from N to S, and 3 m. in extreme breadth, and is 1,340 ft. in alt. above sea-level. Its principal affluent is the Lorze, an efflux of Lake Egeri, which it receives on the N at Chain, and which afterwards conveys its waters to the Reuss. The E bank of this lake is the most fertile. It abounds with fish, and is said to contain carp of 90 lbs weight.

ZUGA, or **ZOUA**, a river of South Africa, which flows from the SE extremity of Lake Ngami, in a stream which, for two or three days from the lake, is from 300 to 500 yds. wide, and pursues an E, S, SE, and then NE course, becoming narrower and shallower as it proceeds, until it divides into a number of small rivulets, which are finally absorbed in extensive salt marshes in the great Kalahari desert. Its water is clear, soft, and cold. Its volume of water is largest in October, and it then gradually decreases till June. Its banks, for some distance from the lake, are flat and swampy; they then rise, and are generally of calcareous tufa. They are lined towards the lake by gigantic trees, among which are the baobab, the Palmyra palm, and the banyan. Alligators and hippopotami are numerous in its waters. The Bakoba are the principal dwellers on the islands and banks of the river.

ZUGAR (JEMAL), a volcanic island in the Red sea, having its NE point in N lat. 14° 5', E long. 42° 48'. It is 28 m. in circumf., and nearly 9 m. long from N to S; and is composed of a series of lofty barren hills. A sprinkling of timber occurs on the N and S parts of the island, and a little grass in some of the valleys affords subsistence to a few antelopes; but the island is only occasionally resorted to by fishermen.

ZUGDAMM, a village of Prussia, in the reg. and circle of Danzig, on the Werder. Pop. 430.

ZUGERBERG, a group of mountains in Switzerland, in the cant. of Zug, to the E of the town of that name. It presents a generally fertile surface, and has fine fruit trees. Its principal summit, the Kamstal, has an alt. of 912 Paris ft. above the level of the lake.

ZUHR, a village of Mecklenburg-Schwerin, prov. of Mecklenburg, and bail. of Wittenburg. Pop. 260.

ZUIDER-ZEE, **ZUTDER-ZEE**, or **SUNDESSA** [i. e. 'South sea'], an inlet of the German ocean, on the coast of Holland, enclosed by the prov. of North Holland on the W, those of Utrecht and Gelderland on the S, the prov. of Over Yssel on the E, and that of Friesland on the NE. Stretching across its entrance on the N, are the islands of Ameland, Schelling, Vlieland, and Texel, and to the SE of these near the opening of the gulf is the island of Wieringen. Between Stavoren, the W extremity of Friesland, and Enkhuisen in Holland, the Zuider-Zee does not exceed 11 m. in breadth; further S it expands into a circular basin, forming the *Zuider-Zee*, properly so called, and presents a diameter of 45 m. The total area is estimated at 1,207 sq. m. To the SW it is connected by the Pampus channel and Het-Y, on the S bank of which is Amsterdam, with the Haarlem Meer. The entrance to the gulf is encumbered with sand-banks. The Zuider-Zee, properly so called, has, except near the shores, comparatively few. It contains the islands of Schokland, on the E of Urk towards the centre, and of Marken in the SW. The Yssel, a branch of the Rhine, and the Vecht with its affluent, the Zwart-water, in the E, and another Vecht, a branch of the Rhine, on the S, are its chief tributaries. The southern part of the gulf was formerly a lake named *Flevo*. It received the Yssel, and discharged a stream into the sea, then 50 m. distant. In 1170, Lake Flevo rose to such a height, that the water spread over the land as far as Utrecht, and the people of that town caught fish from the walls. In 1230, 100,000 persons were drowned in Friesland; and from this date encroachments were rapid: the barrier-islands on the sea-board were diminished in size, and the channels between them deepened. By the wasting action of successive inundations, the Zee grew to nearly its present extent by the beginning of the fifteenth century. On some occasions the water has stood 8 ft. above the surface of the dikes in Friesland and Gelderland. The wind most dreaded on the shores of the Z. is one which beginning at the S, sweeps gradually round, and blows for a time from the NW. This pours in such a heaped-up mass of water from the German ocean, that the dams, except under extraordinary circumstances, are too low to repel it, and meadows, farms, towns, and villages, are overwhelmed. The tide runs with great velocity through the channels between the islands, particularly at the Helder, or 'Hell's-door,' as the Dutch name signifies. The growth of the Z. has resembled that of the Haarlemmer-meer, but on a grander scale. The average depth of the two is about the same, excepting certain cavities in the Z. which are very profound; and the formation of a

barrier-dike in water not more than 12 ft. deep appears to be a practicable undertaking. The project is to construct a dike, with buttresses and flood-gates across the narrowest part of the Z., from Medemblik or Enkhuysen, on the peninsulated portion of N. Holland, to Stavoren in Friesland. The cost, as estimated, would be £5,000,000. In the spring of 1856, the Z. in consequence of the long continuance of northerly and easterly winds, was almost dry. Between Genemuiden, Bloksil, Lemmer, Kampen, and Harderwyk the bed of the sea might be crossed dry footed, and steamboats and other vessels were everywhere high on the sands.

ZULUS, a remarkable tribe of Kaffirs, occupying the country to the N of Natal, and separated from it by the Tugela river. Their territory is fertile, yielding durra and millet, and good pasturage; the greater part of the surface is covered with jungle, and infested by wild animals and venomous reptiles. The Z. are a tall, athletic, well-proportioned race; warlike in their habits, and surpassing most African tribes in intelligence, but imprudent, superstitious, and cruel. About seventy years ago, the Z. were an inconsiderable race, finding a scanty livelihood on the banks of the Mozambique channel, and to the N and E of what is now Natal. In this tribe, however, rose a family the members of which for several generations governed the Z. with a rod of iron. The first of these chiefs was named *Essenzingerona*. Warlike and ambitious, he led the tribe from the swamps of the Mozambique into the more fertile regions of the interior, and, falling upon the inhabitants, either massacred or drove them out of their possessions. Chaka—a man whose name is as terrible in Zulu annals as Domitian or Nero in Roman, was sent by his father *Essenzingerona*, to live with the king of a neighbouring tribe. Shortly afterwards the monarch died, and a younger brother of Chaka reigned in his stead. Chaka spread a report of his own death, and returning in disguise, with the aid of another of his brothers, murdered the new monarch and proclaimed himself king, his first care being to exterminate all *Essenzingerona*'s councillors and friends, and then to assassinate his accomplice brother. He then attacked the king who had shown him hospitality, killed him, exterminated half his people, and made the rest swear fidelity. A rapid round of similar expeditions took place. Chaka became the sole, absolute, and despotic monarch and master of what might be called a kingdom. Isaac—now a Natal settler, and who was forced to accompany Chaka on several of these dreadful raids—witnessed a massacre which Chaka instituted as a sort of sacrifice to the manes of his mother, which lasted a fortnight, and in which it was estimated that upwards of 10,000 people were slain! Chaka, beginning to grow old, had that done to himself by his brother Dingarn which he had done to the brother of both. Dingarn was a modified sort of Chaka. He did not kill so many people as Chaka—for European influence was beginning to assert itself, and the missionaries were saving many lives; but Dingarn, in his heart, was as cruel and as treacherous as his predecessor, and at length, incensed at the trespasses of the Dutch boers upon what he considered his dominions, he invited upwards of 60 of the principal of these farmers to a dinner of friendship. They went, unhappily, unarmed. In the middle of the feast each boer was struck down senseless from behind, and then, before death, impaled upon spikes prepared for the purpose. As might have been expected, the countrymen of the victims took a fearful and a bloody revenge. Every man of white blood, for hundreds of miles around, obeyed the call with all his trusty servants; and about half the tribe of Z. revolted against Dingarn, and joined the Dutch. Dingarn led the remainder of his warriors, and a desperate encounter ended in the rout of Dingarn's army, and his own flight to a neighbouring chief, who received him courteously, and murdered him in the night. This expedition and battle is called by the Dutch people 'the Volks Raid,' and is the Waterloo of Natal and the Cape colony. It broke the power of the Z., and their present king, Panda, has the good sense to prefer trading to fighting, and, by the advice of the colonial authorities, now his neighbours, has abolished the murderous and despotic system of his ancestors. Zulu is, however, far from being yet in a satisfactory state of civilization, but it is immeasurably better than when subjected to the tender mercies of Chaka and Dingarn. Nearly 100,000 Zulus fled during the last reign to Natal.

ZULZ, or **BIALA**, a town of Prussia, in the prov. of Silesia, reg. and 24 m. SSW of Oppeln, and circle of Neustadt, on the Biala. Pop. in 1834, 2,789. It has a castle, three churches, and a synagogue. Lace is its chief article of manufacture.

ZURICH, a northern canton of Switzerland: bounded on the N by Baden and by the territory of Schaffhausen; on the E by the cantons of Thurgau and St. Gall; on the S by Schwyz and Zug; and on the W by Aargau. It has an area of 690 sq. m.; and is in length from N to S about 32 m.; in breadth 25 m. It is somewhat smaller than the average size of an English county; but its pop., 250,696 in 1850, is such as to rank it next to Geneva in density, and among the best-peopled tracts of the continent of Europe: the number of inhabitants being on an average 3,499 to a sq. league; while the average for all Switzerland, in 1850, was 1,370 to a sq. league. The density of the population of this canton is owing less to the fertility of the soil, than to the long continued enjoyment of good government, and consequent habits of industry. The general aspect is pleasant, though without that bold and magnificent scenery which marks the interior and south of Switzerland. The hills do not rise above 3,300 ft., and are separated by beautiful valleys and lakes. There are no glaciers in this cant., the highest mountains being covered with forests and constant verdure. The principal summits are the Allmannskette, the Lägerkette, and the Albikette.—The principal rivers are the Rhine, the Reuss, and the Limmat; all pursuing a W or NW course. The smaller streams are the Thur, the Töss, the Sihl or Sil, and the Glatt. The Limmat is navigable, and flowing through the lake of Zurich, unites with the Aar below Baden. The other lakes are, the Greifensee, and the Pfaffikon-see, on the E of Zurich; the Katsen-see on the NW, and the Türlers-see on the SW. Among the mineral springs are those of Nidol or Nydelhal, the two Geirzenbada, Röslibad, and the baths of Zollikhof, Arnheim, and Drathschmittlein.—The climate is mild, the greatest cold never exceeding 7° 25', and the greatest heat 70° of Fahr. It rains upon an average 100

days in the year. The soil is not naturally fertile, but rendered productive by careful cultivation. In no part of Switzerland is irrigation, manuring, and the mixture of different soils, better understood: rich pastures and extensive orchards meet the eye of the traveller in every direction. The cattle are in general of a good breed. Wine is cultivated; and the quality, in certain tracts of favourable exposure, is good; but in general it is thin and sharp. The cyder and cherry-brandy are excellent. The manufactures of this canton are mostly carried on by weavers in their own houses, to which are attached patches of land. The fabrics are chiefly cotton and light silk stuffs; also linen, woollen, and leather. The iron-steam-boats which ply on the lake are all built here. Corn is imported, the produce being inadequate to the consumption.—In its mode of government, this canton was long aristocratic; but since 1831 the government, as far as election goes, has been democratic. The great council or legislative body of 213 members is elected by universal suffrage. The session of this council is short, the executive functions being committed to 19 of its members. The revenue of the cant. is about £50,000; its contingent to the military force of Switzerland is 8,858 men. The inhabitants are, with the exception of two Catholic parishes, almost all Calvinists. Having joined the Swiss confederacy soon after 1315, this cant. was long the principal state, and had the honour of giving a president to the diet, as well as of receiving at Zurich the ambassadors of foreign powers. At present it ranks in the diet next to the cant. of Berne. Its territory was the scene of important military operations in 1798 and in 1799.

ZURICH, the capital of the above cant., stands on the river Limmat, at its outlet from the N extremity of the lake of Zurich, in a narrow valley between hills, 46 m. ESE of Basle, and 60 m. ENE of Berne. It was fortified with a wall and ditch, and is neat and clean, though most of the houses are old fashioned, and the ramparts have been levelled since 1833. The population, 10,475 in 1812, and 17,040 in 1850, are almost all Calvinists. Z. contains few public buildings of note. The *rath-haus* or town-hall is large and well situated, but inelegant; the cathedral is an old massive structure; of the four other churches, none are entitled to notice; on the other hand, the beauty of scenery is striking. The archery-ground, which extends along the banks of the Limmat to the spot where that river is joined by the Sihl, a copious stream flowing from the southward, is one of the finest walks in Switzerland; and there are a number of fine promenades around the town. Z. having in its lake and river the advantage of water-communication, has long been a place of manufacture and trade, and is now celebrated for its silk and cotton manufactures, and calico-printing. So early as the 13th cent., we read of fabrics of woollens, linen, and leather, in this place; here were also silk-works, small in extent but of note in an age when manufacturing industry was backward. They were soon surpassed by those of Tours and Lyons, and have been latterly replaced by cotton-works, which are carried on to a considerable extent. Few places of the size of Z. have surpassed it in the cultivation of literature. It contains extensive collections of books, manuscripts, paintings, and antiques. The town-library founded in 1628, contains 40,000 vols.; that of the cathedral is also considerable. Of schools and literary establishments, great and small, there are here no less than 24. Philosophy, divinity, and classics, are taught in the *Collegium Carolinum*, but most young divines are educated in Germany. There are here also a military

and a medical seminary, a botanical garden, and a society of physics, economics, and natural history. Z. is the seat of the *corvot* or Swiss diet, alternately with Berne and Lucerne. A railway connects Z. with Baden or Aargau.

ZURICHER-SEE, a lake of Switzerland, extending in the form of a crescent, chiefly through the canton of Z., but partly also between those of Schwyz and St. Gall. It is divided into an upper and lower lake by the strait at Rapperschwyl, which, the breadth being little more than a quarter of a mile, is crossed by a long wooden bridge; in other places the breadth varies to the extent of nearly 3 miles. Its entire length is about 30 m. in a long irregular course. Its greatest depth is 600 ft. This lake, without rivalling those of Geneva or Lucerne in awful sublimity of scenery, is still one of the finest in Europe, being surrounded by a populous and well cultivated country, and the prospects on its banks being richly varied. It abounds in fish, and affords the means of extensive water-carriage. By the Linth it is connected with the lake of Wallenstadt.

ZURITE, a town of Peru, in the dep. and 30 m. NW of Cuzco.

ZURRAH, ZERREH, ZARANG, DURRAH, HAMUN, KHASHEK, or LOUKH, a lake of Afghanistan, in Seistan, near the Persian frontier. It is still little known, but is stated to be 105 m. in length from ENE to WSW, and 30 m. in breadth. It receives the Helmund at the E extremity, and the Furrah-Rud on the NE, but has no apparent outlet. Its waters are said by Ebn-Haukal to be sweet and abounding in fish, rising and falling periodically with the season, and bordered with reeds. Elphinstone, on the other hand, pronounces the waters to be scarcely drinkable, and that they annually occasion extensive inundations. Near its centre is an island named Kohzor or Killahi, on which is Fort Rustam. This lake is the *Aria Palus* of ancient geographers.

ZUTPHEN, a town of Holland, capital of an arrondissement and canton of the same name, in the prov. of Gelderland, 9 m. S of Deventer, and 17 m. ENE of Arnheim, on the Yssel, by which it is divided into two parts, and at the confluence of the Berkel, in N lat. 52° 8' 24", and E long. 10° 11' 39". Pop. 10,000. It is well-built and fortified, and contains an ancient cathedral, or *groote-kerk*, Saint-Walburga, with a lofty tower, a town-house, and council buildings, with a peel of 86 bells, and a Latin school. It has paper, oil, tan, and fulling-mills and tanneries, and carries on an active trade in grain. The view of Z. across the river Yssel is striking: its bastions, bridges, and the great tower of Saint Walburga contrasting remarkably with the vast plains through which the Berkel and the Yssel flow to their point of confluence here. The environs are pleasant, and contain considerable quantities of salt. Z. is of great antiquity, and was formerly a Hanse town. In 1572, it was pillaged by the Spaniards under Frederick of Toledo, son of the Duke of Alba, and again in 1583 by the Duke of Parma. In 1591 it was taken by Prince Maurice of Nassau, and in 1672 was captured and dismantled by the French.—The arrond. comprises 14 cant. Pop. 80,000.

It is of small extent, but is well and regularly built. It has a fine castle, formerly the residence of the ducal family of Z., a Calvinist and two Lutheran churches, a gymnasium, and an orphans' asylum. It has manufactories of woollen fabrics, steel-ware, tobacco, gypsum, oil-mills, and tanneries. The printing press of this town, noted for its fine editions of the classics, was, during the French occupation, removed to Strasburg. In the environs are the remains of the chateau built by Stanislaus, king of Poland, and of the castle of Carlsberg belonging to the Duke de Deux-Ponts, and destroyed during the French Revolution.—The duchy of Zweibrücken was formerly a county-fief of the bishopric of Metz. Half of it was sold to Stephen, count-palatine of the Rhine, third son of the emperor Robert, and the other half passed to Philip V., count of Hanau, by his marriage with the daughter of James, last duke of Z. These two portions were reunited by Louis-le-Noti, the first duke, and the duchy was ever held by a descendant of the counts-palatine. It fell by succession to Charles XI., king of Sweden, but the king of France, desirous of reviving the rights of sovereignty on the duchy, took it in 1676, and held it till after the peace of Ryswick. Charles XII. leaving no heir, the duchy fell to Gustavus Emmanuel, and thence to John Casimir. The duke of Z. had a sitting and voice in the diets of the empire, when he took rank in the college of princes. His revenue was estimated at 1,875,000 francs. This duchy was repeatedly possessed by the French between 1793 and 1794, and in 1802 was ceded by the treaty of Luneville to France. In 1814 it was granted in exchange for other territory to Bavaria.

ANGLIA. The Angli, a tribe of the Suevi, are first noticed by Tacitus, when they appear to have been located to the E of the Elbe. Ptolemy places them on the W of that river, in what is now Magdeburg. D'Anville represents them as occupying in the 5th cent. the greater portion of Schleswig and part of Holstein, having the German ocean on the W, the Saxons on the S, the Vacini on the SE, and the Jates on the N. In 449, a large body of Saxons and Angles, led by Hengist and Norsa, settled themselves in England; and it would appear that the Angles were of predominating influence in this expedition, for they gave their own name to the newly acquired country,—ANGEL-LAND or ANGLIA.

The older geographers considered Egypt as belonging either partially or entirely to Asia; but they were unacquainted with the extreme N and E portion of Asia. The conquests of Alexander added somewhat to their knowledge of India. The Romans, in their wars with Mithridates, king of Pontus, became acquainted with the Caucasus; and pushing forward to the shores of the Caspian, they got information of a commercial route through Bactria to India; and soon afterwards of another route over the high table-land of Upper Asia, to the Seres or Chinese. The Periplus of Arrian contains a brief description of the Pontus Euxinus or Black sea; and Ptolemy knew the Caspian to be an inland sea.

ARTICLE III.

ON THE PRONUNCIATION OF MODERN GEOGRAPHICAL NAMES.

* * This article is mainly a reprint of the excellent Introduction to 'Lippincott's Pronouncing Gazetteer,' a work of great merit, published at Philadelphia, U. S., in 1855. We have also employed in its compilation the remarks attached by Professor Porter of Yale college to his 'Pronouncing Vocabulary of Modern Geographical Names.'

I. GEOGRAPHICAL names may properly be divided into two great classes. The first division comprises those which, in their native language, are written either in Roman letters, or else in characters (like the German and Greek) which can readily be converted into corresponding Roman letters. The mode of spelling such names is generally uniform, and the same in each of the different European languages. Thus, *ΕΤΝΑ* or *ÆΤΝΑ*—the name by which the great volcanic mountain of Sicily is known to the Italians—is also the English, French, German, Dutch, Spanish, and Portuguese name for the same mountain. So *LATBACH* or *LAIBACH*, the capital of Illyria, is not only the German, but the English, French, Italian, and Spanish name. Thus, also, *YORK*, a city of England, is not merely the English name, but the French, German, Dutch, Italian, Spanish, &c. The same rule holds true with regard to a large majority of the names of Western and Southern Europe.

The other division of geographical names embraces those which, in their native language, are neither written in Roman letters, nor in characters that can be converted into corresponding Roman letters: such are the Russian, Turkish, Arabic, Persian, &c. Names of this class, with few if any exceptions, are written differently in the different European languages, each nation aiming to express the *sound* or pronunciation of the foreign name by the letters of its own tongue. Thus, for example, an Englishman visiting the capital of Fezzan, in Northern Africa, and wishing to indicate the sound of the name as pronounced by the inhabitants, would naturally write it *MOOZOOK*, or adopting the Italian pronunciation of the vowel *u*, generally followed in foreign names in the body of this work, *MURZUK*; a Frenchman would write *MOURZOUK*; a German *MURSUK*; these various spellings being intended to represent precisely the same sound. Again, if an Englishman wished to represent the native pronunciation of a certain city of Persia, he would write it *SNOOSTER* or *SHUSTER*; a Frenchman would spell it *CHOSTER*; a German, *SCHUSTER*; an Italian, *SCIUSTER*; a Portuguese, *CHUSTER* or *XUSTER*, &c.; these being, in fact, the correct spellings of the above name in those different languages respectively.

This mode or rule of writing African and Oriental names is, generally speaking, very strictly adhered to by the greater number of French and German writers;¹ but, unfortunately, the English geo-

graphers have, for the most part, pursued a very different course. Instead of conforming to a rule which has the double merit of being simple and easy for the writer,² and clear and satisfactory to the reader, they have, by sometimes writing in the French and sometimes in the German mode, and not unfrequently combining the two in the same name, involved the department of Oriental geography in a confusion which is most perplexing to all, and is absolutely inextricable to those who have not made this subject one of long and laborious study. Many of the foreign spellings found in the writings of English geographers have doubtless been taken from French and German works, the copyist neglecting to translate the names, while making a translation of the rest of the book.

II. It is obviously an immense advantage, in an English work intended for general readers, to write names in such a manner that they can without difficulty be pronounced correctly by the ordinary English scholar. Another strong argument in favour

same class as those of Western Europe. Accordingly, we have not merely

but we also find in the most popular French geographical works, examples like the following:—

It may be remarked that the French names in the foregoing list, with one or two exceptions, represent the same sound as the English, and are evidently only a French translation of the English name. It should be further observed, that, while the German geographers spell the names of other parts of Asia (see the last column in the first of the foregoing lists) according to the principle above stated, (that is, representing the *sound* of the foreign name by the letters of their own language,) they generally write the names of British India after the English mode; as, *HYDERABAD*, *JETPUR*, *MYSOORE*, &c.

2 Of course, reference is here made to an English traveller writing the name for the first time. It certainly would be quite as easy, to say the least, for an Englishman to represent any given sound in such a name by the letters of his mother tongue as by those of a foreign language.

1 It is worthy of remark that the French not only spell the names of those Asiatic countries which have not submitted to European domination—as Persia, China, &c.—according to the rule above given, but even the names of British India, although these might be considered, in some sense, as belonging to the

of the use of English orthoepy in such cases, is that it is capable of conveniently expressing or representing a greater variety of sounds than any other European language. There is no sound, we believe, that is extensively used in oriental names which we cannot express as well as the French, and there are several which we can express much better than they; while there are some sounds, perfectly familiar to our tongue, which they cannot express at all. Take, for example, the sound of our *j*—a very common one in the names both of Asia and Africa: what we express by a single letter is indicated less perfectly in the French language by two—*dj*, (as, *Djidda* for *JIDDA*, *Djoulamerk* for *JULAMERK*, &c.) so, also, the sound of *ch*, one of continual occurrence both in the names of Asia and Eastern Europe, is represented in French by three letters—*ch*, (as *Tchanda* for *CHANDA*, *Tchambal* for *CHUMBUL*, &c.) True, the English often use (especially at the end of a syllable) *ch* in order to denote the same sound; it is, however, important to observe that this sound, as well as that of *j*, is one of the most common and familiar to the English tongue, while both are foreign to the French language, since neither of them is to be found in any genuine French word. Again, our *w* expresses a sound (common in the Oriental languages) which is not nearly so neatly nor so well expressed by the French *ou*, the latter being the proper equivalent of our *oo* or the Italian *u*. This defect is so obvious, that some of the most eminent French writers, (Pauthier, for example, in his works on China) make use of the English *w* in writing certain foreign names. Thus instead of employing *ouou* to express the sound of *ou* or *woo*, they write *wou*; instead of *ouen*, *wen*, &c. Lastly, there are sounds expressed in our tongue with the utmost facility which French orthoepy cannot represent at all; among these are the sounds of the Greek *θ* (*th*) and *δ* (*d*) common in Turkey and the Grecian islands: the former exactly corresponding to our *th* in *thin*, the latter to *th* in *this*. With respect to the German language, there is, if we mistake not, but one frequently occurring sound in oriental names (that of *kh*—represented by the German *ch*) which can be represented by it better than by the English, while there are many which can not only be expressed in English more conveniently, but more correctly, than in German. Thus, the Germans employ four letters (*dech*) to indicate the sound of our *j*, and, after all, represent it most imperfectly; for example, they write *Dechulamerk*, *Dechidda*, *Dechilolo*, for *JULAMERK*, *JIDDA*, and *JILOLO*. Their four letters *dech* do not represent correctly the sound of our *ch*, nor does their *sch* convey even a tolerable idea of our *zh*, (that of *s* in *pleasure* or *occasion*.) Like the French, they have no letter or combination of letters equivalent to our *w*, nor can they in any manner represent the sound of the modern Greek *φ* or *ψ*.

Another mode of writing oriental names, now adopted by some of the best English geographers, and generally followed in the 'Journal of the Royal Geographical Society,' and in the present work, is to employ the English consonants in conjunction with the Italian vowels, those vowels which have a long or full sound being generally marked with an accent, thus: *Shapûr*, for *SHAPOOR* or *SHAPOUR*; *Tabritz*, for *TABREEZ*, &c. It is to be observed, however, that any general rule for writing Oriental names is, or ought to be, somewhat modified by those great practical laws of language, founded on usage, which overrule all considerations of mere theoretical propriety; and that it is not desirable to change any spelling which universal usage appears to have established. Not only ought the

common English names of the great countries of Asia and Africa (as *PERSIA*, *HINDOSTAN*, *CHINA*, *EGYPT*, &c.) to be retained, but the ordinary spelling of names of far less note, when sanctioned by the universal, or almost universal, practice of the best English writers, should be adhered to. Thus, we still write *OUDE*, and not *Ood*; *DELHI*, and not *Delhee* or *Delli*; *CAIRO*, not *Kahira*, &c. In short, it is only when there appears to be no settled usage among geographical writers, that we may take the liberty of selecting out of many forms that which we deem preferable to the others.

III. It is scarcely necessary to dwell upon the essential importance of pronunciation, since it enforces its own claims upon "all who talk or read." In fact, the need of some uniform system of geographical pronunciation appears now to be universally felt and acknowledged; and geographers seem to be nearly unanimous in opinion, that the only rational system of geographical pronunciation is that which is based on the principle of pronouncing all names of places as nearly as possible as they are pronounced by the educated people of the respective countries to which they belong, with the exception of those few well-known foreign names which appear to have acquired a fixed English pronunciation, as *PARIS*, *NAPLES*, *FLORENCE*, *VENICE*, *MUNICH*, &c.; these exceptional names being pronounced according to the usage of the best English speakers.

It is admitted that cases not unfrequently occur, in which it is impossible to convey, with any great degree of precision, the native pronunciation of other countries by means of English letters; but something is undoubtedly gained by such an approximation to the true sound, as would enable one more readily to understand, and to be understood by those who are familiar with the names of places as spoken by the inhabitants themselves. Some, indeed, have maintained the propriety of pronouncing foreign names as they are written, giving to every letter its proper English sound. But such a system would obviously lead to the greatest confusion, and be attended with inextricable difficulties. What, for example, would be the proper English pronunciation of *Seine*? Should the *ei* be pronounced like *ee*, as in the words *seize*, *ceiling*, *receive*, &c.? or like *ai*, as in *vein*, *weight*, *inveigh*; or like *i* long, as in *height*, *sleight*, &c.? Should *SEINE* then be pronounced *seen*, *sain*, or *sine*? or should we sound the final *e*, and make it *see-nee*, *sai-nee*, or *si-nee*? This one instance, out of a multitude, may perhaps serve to show the endless diversity and confusion into which such a system, or rather want of system, must of necessity lead. But this is not all; there are innumerable cases wherein it is very difficult, if not impossible, to pronounce the names of other countries according to the English sound of the letters, *e. g.*, *CERNIGOW*, *CSONGRAD*, *HJELMAR*, *HJORRO*, *LJUSNE*, *SZEGEDIN*, *TJIRINGIN*, &c., while there is no difficulty whatever in pronouncing them according to the native sound. A multitude of instances also occur in which the English manner of pronouncing names, though not difficult, is far less euphonic than that of the country to which such names belong. *MINHO*, (*meen'yo*), a river, and *BATALHA*, (*ba-tal'ya*), a town of Portugal, and *BACCHIGLIONE*, (*bak-keel-yo'na*), a river of Italy, may serve as examples.

The acquisition of ten or twelve new sounds, which might be easily learned by persons of ordinary aptitude in a few hours, would enable any one, who can read correctly the English pronunciation as marked in Walker's or Worcester's Dictionary, to pronounce with tolerable correctness all the

names of Portugal, Spain, Italy, France, Belgium, the Netherlands, Germany, Denmark, Sweden, Norway, and perhaps of Hungary. The difficulties in regard to the names of Poland, Bohemia, and the Slavonian countries generally, are confessedly much greater—but of this hereafter. Persons who view the different European languages separately, are apt to regard the mastering of the difficult sounds in all, as a much more formidable task than it really is. They forget that a large proportion of the most difficult sounds are common to several different languages, and after being once thoroughly learned, can, of course, present no further obstacle. Of this class is the French and Dutch (or Flemish) *u*, equivalent to the German and Hungarian *ü*, and to the Danish, Norwegian, and Swedish *y*. Here it will be seen that the same sound, intermediate to the English *ee* in *feet*, and the *oo* in *book*, occurs in seven different languages. The German *æ* or *ö* is likewise found in Danish, Norwegian, Swedish, and Hungarian, and nearly corresponds to one of the most difficult Dutch sounds, that of *œu* as in *LEUWARDEN*; the German *ch* in *ack* or *noch* is almost exactly equivalent in sound to the Spanish *j* or *x*, and is essentially the same as the Polish, Dutch, Scotch, and Welsh *ch*, and the Dutch *g*.

It is worthy of remark that in all the thousands of Italian names, there is not a single sound which an Englishman cannot utter with perfect ease. We do not mean to deny that there are combinations of letters, as *cia* (pronounced *cha*), *gia*, (pronounced *joo* or *ju*), and *ctiu*, (pronounced *shoo* or *shu*), which, without any explanations, might appear difficult to the mere English scholar; but when these combinations are represented by their proper English equivalents, there is obviously no difficulty whatever. What has been said of Italian, is substantially true of Portuguese; the nasal sounds in such words as *alem*, *sao*, though having no exact equivalent in English, are by no means difficult for an Englishman to acquire; and, indeed, unless great nicety be called for, might very well be supplied by the English *ng*, (thus *alem* might be pronounced a-len^g, and *sao*, sown^g.) In Spanish there is but one difficult sound, that of *j* or *x*, corresponding, as already remarked, to the German guttural *ch*. So that by the acquisition of one, or at most, of two foreign sounds, an Englishman or American will be enabled (if the pronunciation be properly marked) to pronounce correctly the fifty thousand or more names of Italy, Portugal, Spain, Brazil, and Spanish America. It would, we think, be well worth while to give the pronunciation of these names, even were it impossible to give correctly those of any of the other European countries. But no such impossibility exists. With the exception of the Slavonic languages, the pronunciation of the French is by far the most difficult for the English scholar to acquire. Yet any child, with an average capacity for acquiring language, will master all the French sounds in a few lessons. The German comes next in point of difficulty, and after it scarcely any thing more remains to be done so far as regards the languages of Western and Northern Europe. As to the Slavonic languages, we admit that a number of the Polish and Bohemian names are absolutely unpronounceable; but as Poland is a part of Russia, we might with propriety adopt in such cases the Russian name and pronunciation, which, with few exceptions, are sufficiently easy for the English speaker. So, also, if we find it impossible to pronounce some of the names of Bohemia, Galicia, &c., we might in like manner substitute the German names in those instances—the German being the official language of the Austrian government, to

which Bohemia and Galicia belong. With regard, however, to the languages of Russia, Turkey, &c., the names of the places in these countries, as we meet with them, being not really Russian or Turkish names, but only French, German, or English transcripts of those names, there is often much greater difficulty in determining the correct spelling and pronunciation. Even scholars the most thoroughly acquainted with those languages, often feel uncertain as to the best mode of representing names of this class in the languages of Western Europe. Hence it follows that it is next to impossible, in such cases, to attain that correctness, or exactness, in spelling, and precision in marking the pronunciation, which can be attained with comparative ease in names written in Roman or German characters. Of the topographical names of Great Britain and the United States, it may be asserted that while in the fixedness of the spelling they resemble those of Spain, France, &c., in difficulty of pronunciation they almost exceed those of Russia or Poland. This characteristic of English and American names is evidently to be attributed to the introduction of new and incongruous foreign elements into the language, after this has been to a certain extent formed and fixed. The existence in the same country of several entirely distinct nations, Welsh, Saxons, Danes, &c., each tenacious of its own natural peculiarities, which have been in a measure protected and fostered by the freedom of the government, has doubtless been the principal cause of the great irregularity and incongruity of the English language. We find, indeed, as regards English names, scarcely one general rule of pronunciation, either in relation to accent or to the sounds of the letters on which we can with confidence rely: the actual practice of the best speakers is, therefore, our only safe guide. Anomalies similar to those which prevail in England, (though modified by varying circumstances,) are not unfrequently to be met with in the United States. TERRE BONNE, (pronounced *tar bôn* or *tar bonn*), NATCHITOCHES, (usually called *nak-e-tish*), TERRA HAUTE, (*ter'rah hôt*, *tar hôt* or *ter'rah hût*), and SAULT SAINT MARIE, (*sœ sent ma'ree*), are remarkable examples of this class. Settled originally and named by the French, although afterwards chiefly inhabited by those speaking English, the names of those places are neither English nor French, nor even a mixture of the two, but a strange corruption produced, it would seem, by each of the American settlers imagining that if he was careful to utter a sound which none could suspect of being English, he must as a matter of course speak very good French.

IV. If any might be allowed to pronounce foreign names without regard to the peculiar sounds of the letters, or to the accents, which prevail in other countries, this privilege might surely be claimed by the poets, who, in the use even of English words, are considered to enjoy a special license. It is very evident, however—as every one who will take the trouble to examine the works of the better class of them, must admit—that, as a body, they have neither claimed nor used this privilege. On the contrary, our more distinguished poets have usually exhibited a classical—we might almost say a punctilious—accuracy, in the employment of foreign names, whether of places or persons. To illustrate by examples:—GRANADA³ and GR-

³ "In Lithuania had he served and Russe;
No Christian man so oft of his degree.
At Algexi'ra, in GRANADA, he
Had join'd the siege;—"—CHAUCER.
"The Moorish king rides up and down
Through GRANADA's royal town"—

NOA 4 are pronounced by all the great poets who use these names, from Chaucer and Shakspeare down to the present time, with the native accentuation; that is, GRANADA has the accent on the penultima, and GENOA on the antepenultima, though the generality of speakers, who have not heard these names pronounced, but merely follow analogy, or their own notions of propriety, reverse the accentuation, making GRANADA rhyme with *Canada*, and GENOA with *boa*. No poet, perhaps, employs foreign names so frequently as Byron, and yet—though he often writes very carelessly—it would be difficult, in all the poetry he has written, to point out half a dozen instances where he has not conformed to the foreign accentuation, excepting always those few well-known names which have acquired an established English pronunciation, and in these cases he appears invariably to adopt the pronunciation of the best English speakers. The same may be said of Scott; though he writes with great freedom, he rarely, if ever, violates the strictest rules of geographical pronunciation. In the poetry of Rogers, Southey, Moore, Campbell, and Montgomery, we have met with scarcely a solitary example of departure from the native accentuation of names, which does not properly come within the exception above stated.

Among the principal languages of continental Europe, the German, in its accent and in the metre of its verse, has the nearest affinity to the English; and it is worthy of remark, that precisely the same general usage prevails with respect to foreign names in German poetry, as in that of our own tongue. It may be observed, however, that the Germans conform more exactly to the native accentuation of the names of other countries than the English. Any one may satisfy himself of the correctness of these statements, if he will take the trouble to consult the poems of Schiller, who appears to have had occasion to use foreign names far more frequently than almost any other German poet. In his drama of 'Don Carlos,' MADRID occurs near twenty times, and *always* with the accent on the last syllable. This one fact (even were there no other) may show how sparingly the "poetical license," so often alluded to, is used by the most popular, and perhaps the most careless in versification, of all the great poets of Germany. MIRANDOLA (a town in Italy) occurs twice, and in both instances has the accent on the antepenultima. This is the more remarkable, because MIRANDOLA is an exception to the general rule of Italian pronunciation, which places the accent on the penultima of words ending in a vowel. If our poet is not equally correct in regard to ALCALA, (a small town of Spain,) it was owing, doubtless, either to the difficulty of making such a name "lie smooth in rhyme," or to his being ignorant of its true accentuation. The

"And GRANADA must be won,
And thyself with her undone."—BYRON.

"GRANADA caught it in her Moorish hall,
Gallia bade her children fight or fall."—SCOTT.

"There was crying in GRANADA when the sun was going down."—

"Farewell, farewell, GRANADA, thou city without peer."
LOCKHART.

4 "Signior Baptista may remember me
Near twenty years ago, in GENOA, where
We were lodgers at the Pegasus."—SHAKESPEARE.

"Were GENOA's galleys riding in the port"—BYRON.

"How quick they carved their victims and how well,
Let Saxony, let injured GENOA tell."—MOORE.

"That noble haven, where, when GENOA reign'd,
A hundred galleys shelter'd"—ROBERTS.

"My native GENOA, if with tearless eye
Prone in the dust thy beauteous form I see."

MONTGOMERY.

latter is by no means improbable, inasmuch as the Spanish language is far less studied by the generality of European scholars than the Italian. That it was not the result of carelessness is shown by the fact that ALCALA is always pronounced in the poem in the same manner, and according to the general rule of Spanish accentuation; that is, with the accent on the penultima. It will be perceived that Schiller places the accent on the last syllable of PARIS, ST. DENIS, and ST. QUENTIN—in all of which he differs from the English and conforms to the French accentuation. But perhaps the most remarkable illustration of this tendency to adopt the native pronunciation of foreign names is found in his drama of 'Mary Stuart,' where the poet, with the obvious intention of obliging his countrymen to pronounce the English names correctly, invariably in his verse spells LEICESTER 'LESTER,' although in the explanatory (prose) parts of the play he as invariably writes it LEICESTER, as we do in English. For the same reason, doubtless, he writes BOLEYN 'BOULEN,' as this spelling would lead his countrymen to pronounce the name *Boolen*, nearly as it is spoken in England. Had he written it BOLEYN, the Germans would be in danger of placing the accent on the last syllable, as it is frequently pronounced in the United States.

What has been said above respecting the usage of the poets refers principally to *accentuation*, which, for the most part, can be readily determined by the metre of the poetry. Their manner of pronouncing the letters of a foreign name is far less easily ascertained, since it can only be known when the name ends a line in rhyme; and even then it is often extremely uncertain, as they appear to consider themselves entitled, in such cases, to much greater license than in the accentuation of words. Thus we often see associated, in rhyme, words which correspond but very imperfectly in sound, as *creasy* and *lie*, *mourn* and *burn*, &c. Nevertheless, by comparing a number of examples, and especially by observing the usage of those poets who are most remarkable for the correctness of their rhymes, we shall frequently be enabled to ascertain the true pronunciation of a word or name. It will be found that while foreign names that are in familiar use in our own language, have an English pronunciation, those not very well known are generally pronounced with the foreign sound of the letters, as will be seen from the following passages:

"Not now to while an hour away,
Gone to the falls in *Valombré*."—

"'Tis *Jacqueline*! 'tis *Jacqueline*,"

"Her little brother laughing cried;

"I know her by her kirtle green,
She comes along the mountain side."

"De Courcy, lord of *Argentiere*!

Thy thirst for vengeance sought the *snare*."—ROBERTS.

"Winding between Alpine trees;
Spiry and dark around their house of *prayer*,
Below the icy bed of bright *Argentiere*."—WORDSWORTH.

"This circumstance may serve to give a notion
Of the high talents of this new *Vasden*,
But the town ditch below was deep as ocean,
The rampart higher than you'd wish to *Aang*."—BYRON.

"For many an age remember'd long
Shall live the towers of *Hougmont*,
And fields of *Waterloo*."—SCOTT.

It would be easy to cite a multitude of such examples; but these will perhaps be sufficient to illustrate our position.

5 In these names the letter *n* is similar in sound to *ng*. The *t* at the end of *Hougmont* is silent. The rhymes, however, are not quite perfect: the *o* in the last syllable of *Hougmont* should be sounded like *o* in *won't*. The latter syllable of *Vasden* sounds like *bong*.

On the other hand, we shall find the poets pronounce foreign names of some celebrity, such as *NILE*, *PARIS*, *LYONS*, *CADIZ*, *PORTIERS* or *POICTIERS*, &c., with the English sound of the letters, as may be seen from these and similar examples:

"Deep in those solitary woods
Where oft the genii of the floods
Dance round the cradle of their *Nile*,
And hail the new-born Giant's *smile*."—MOORE.

"Oh, never talk again to me
Of northern climes and British *ladies*;
It has not been your lot to see,
Like me, the lovely girl of *Cádiz*."—BYRON.

"And Courtenay's pride and Percy's fame
Biased broader yet in after years,
At *Cressy* red and fell *Poitiers*."—SCOTT.

"So the shaft
Of victory mounts high, and blood is quaff'd
In fields that rival *Cressy* and *Poitiers*—
Pride to be wash'd away by bitter *tears*."—WORDSWORTH.

Instead of saying that the poets conform to the native accentuation of proper names, except in cases where these are well known, we might, perhaps, with more propriety, say that they merely follow the practice of the best speakers, of which their own may generally be regarded as the written representation. We sometimes hear it objected to the authority of the poets, that well-known names are occasionally pronounced, even by those who rank among our best poets, quite differently from the prevailing practice of the best speakers. Goldsmith, for example, accentuates the penultima of *NIAGARA*,⁶ and Campbell the antepenultima of *WYOMING*,⁷ just reversing the correct pronunciation, which places the accent on the third syllable from the end in *NIAGARA*, and on the second in *WYOMING*. But this discrepancy is readily explained by the fact, that neither of these poets was ever in America, and probably had no opportunity to learn the practice of the best speakers in the United States. It may be observed, however, that Goldsmith gave what was probably the correct accentuation of *NIAGARA* in his day. Scarcely a single instance can be pointed out, wherein any good English poet has misaccentuated a name with the sound of which he was familiar; we are, therefore, warranted in concluding, that when a name in a region remote or rarely visited is mispronounced, it is owing rather to the want of knowledge than to the carelessness or license of the poet.

V. The Latin names of foreign countries are nearly always to be pronounced with the English sounds of the letters. Thus, in *BAVARIA*, *BULGARIA*, *LUSITANIA*, and *TRANSYLVANIA*, the accented *a* should have its first sound. In Prussia and Russia, however, the *u*, instead of being pronounced short, as it would unquestionably be in ancient Latin names of this kind, is usually sounded like *oo*, assuming in these instances the character of the German or Russian *u*. In like manner, the first syllable of *BULGARIA* is to be pronounced *Bööl*, and not *Bül*.

In the anglicized forms of foreign names, and in most well-known names of foreign countries, the same rules of pronunciation, generally speaking, obtain, as in genuine English words, *e. g.* *SPAIN*, *ITALY*, *NAPLES*, &c.

At the same time, we may observe a general tendency to adopt those sounds of the English vowels

⁶ "Where wild Oswego spreads her swamps around,
And *NIAGARA* stuns with thund'ring sound."

The Traveller.

⁷ "On *Snequehanna's* side fair *WYOMING*."

"And scarce had *WYOMING* of war and crime
Heard but in transatlantic story rung."
Gertrude of Wyoming.

which approach most nearly to the foreign sounds: thus the *a* in the first syllable of *ADRIATIC* and *PARIS* has a sound much nearer to the French and Italian *a* than its first sound, though this would probably be given to these names by the mere English scholar who should be guided by analogy solely. In like manner, the *i* in *MILAN* is short, so as nearly to correspond to the Italian *i*, which is like our *e* or *ee*. Again, in the pronunciation of foreign names that have become thoroughly anglicized, it is interesting to observe the tendency of our language to throw the accent as far as possible from the termination. Thus *PARIS* is pronounced with the accent on the first syllable, though the French appear to place it on the last; and the Germans, who have not the same aversion to the ultimate accent that we have, lay the stress of voice distinctly on the final syllable, thus, *pa-ris'*. *HANOVER*, which might be pronounced with the native accentuation (*HAN-ó-ver*) without the slightest offence to the genius of our tongue, has become irrecoverably *HAN'OVER*. Thus, also, we pronounce *ANDALUSIA* (in Spanish *ANDALUCÍA*), *ARAGON*, (in Spanish, *ARAGÓN*), &c. So, in the United States, the old *NIAGARA* has become unalterably fixed as *NIAG'ARA*; and *HURON* has given place to *HU'RON*.

VI. It may be observed that with respect to foreign names, not only in the French, Italian, and other languages that are written in the Roman letters, but also in German and Greek, (the characters of which may be readily converted into corresponding Roman letters,) it is generally customary in English to retain the literal spelling, *e. g.* *ANSPACH*, (German, *Anspach*), *KÖNIGSBERG*, (German, *Königsberg*), *CHIOS*, (Greek, *Xios*), &c., excepting a very few well-known names, as *LYONS*, (French, *Lyon*), *NAPLES*, (Italian, *Napoli*), *MUNICH*, (German, *München*), *DANTZIG*, (German, *Danzig*), *LEIPZIG*, (German, *Leipzig*;) we often find, however, the last two names spelled literally *Danzig* and *Leipzig*. On the other hand, names in languages of which the characters cannot be readily converted into Roman letters, or which are but little known as written languages, are usually spelled according to their sound in some well-known European tongue. Thus the name of one of the cities of Persia is written, in English, *Shooster* or *Shuster*; in German, *Schuster*; and in French, *Chouster*; precisely the same sound being expressed by these different spellings. We find, in English works of the highest character, these various modes of writing oriental and other names employed indiscriminately.

VII. In giving the pronunciation of geographical names, to represent the accent correctly is a principal difficulty to be encountered. Those acquainted with French are aware that this language has no accent in the sense in which we employ the term. The same may be said of the Hungarian, and perhaps also of the Arabic, Turkish, and Persian. At all events, those best acquainted with these languages are not unfrequently at a loss, when they wish to represent accurately in English the accentuation of Arabic, Turkish, and Persian words. Nevertheless, it will be found that here, as in the French and Hungarian, there is something analogous to our accent, which will generally serve to guide us in marking in English the accentuation of names in these languages. The different syllables of oriental names, however, like those of French words, are not unfrequently pronounced with a stress of voice so nearly equal, that, in a number of instances, the use of the secondary accents is necessary in order to indicate more precisely the true pronunciation.

(1.) It may not be improper here to remind the

reader, that the accents which we often see upon oriental names are by no means to be understood as always indicating the manner in which an Englishman should accentuate these names in pronunciation, as they are often employed to denote some particular sound in the vowels over which they are placed. Thus some authors place an accent upon *a*, when they wish merely to signify that this letter has the clear full sound of *a* in *far*. In the same manner, an accent is placed upon *u*, in order to show that it has the Italian or German sound, or, in other words, is to be pronounced like *oo*.

(2.) The sound of *a* in several of the oriental languages is often very broad, approaching nearly to that of *au* in English. Hence we often see *AF-GHAUX* instead of *AFGHAN*, *CAUVERY* instead of *CAVERTY*, *sultaux* instead of *sultan*, &c. In *NEPAUL* and *BHOPAL* the French indicate the same sound by using *a* with a circumflex, *e. g.* *NEPAL*, *BHOPAL*, &c. This method is, perhaps, preferable to ours, the sound of *â* being intermediate between that in the English word *far* and that in *full*.

(3.) The Arabic article *al* or *el* is often changed in pronunciation, so as to correspond with the initial consonant of the word to which it is prefixed; thus, *EL-RASHEED*, (*Rashid*), *EL-SHAM*, (the Arabic name of Syria,) and *EL-SHOOR*, are pronounced, and should be written in English, *Er-Rashid*, *Esh-Sham*, *Es-Shoort*. The vowel sound of the article also varies considerably, sometimes approaching that of *oo*; thus the "Country of dates," is usually pronounced *Beled'ool Jer-ceed*. So *Es-Shoor* (or *Shoort*, without the article) is sometimes written *Assyout* and *Osiut*.

(4.) *Gh*, in the Arabic and some other oriental tongues, is not merely a hard *g*, as in the Italian, nor an aspirate like the German *ch*, as in the Irish language, but a harsh guttural, bearing the same relation to the German *ch* that *g* bears to *k*. It has no equivalent in any European language, but may be best represented by a hard *g*.

(5.) *Kh* is equivalent to *ch* in German, when followed by *a*, *o*, *u*, or *r*; and may be represented by the English letter *k* in orthoepey.

ARTICLE IV.

GENERAL PRINCIPLES OF PRONUNCIATION OF THE MORE IMPORTANT EUROPEAN AND ORIENTAL LANGUAGES.

I.

BOHEMIAN.

The Bohemian or Tehechian, a Slavonic dialect spoken by about 7,200,000, nearly corresponds in the sound of its letters to the Polish. See Section X. of this article.

II.

DANISH.

The Danish is a Teutonic language of the Scandinavian branch.

1. *A* is pronounced generally as in the English word *far*, though it frequently approaches the sound of *a* in *fat*.

2. *Ê*, at the end of an accented syllable, usually has a sound like that of *i* in *pin*; in other cases it is sometimes like *e* in *met*, and sometimes like *e* in *battery*.

3. *I* is like *ee*, or like *i* in *pin*.

4. *O* is like the English *o*.

5. *U* is like *oo*, or the German and Italian *u*.

6. *Y* is equivalent to the German *û*.

7. *Aa* sounds like long *ô*.

8. *Äe* sounds like *e* in *fate*.

9. *Je* sounds like *ee* in English, or *i* in Italian.

10. *Oe* or *ô* is the same as in German.

11. The consonants *b, c, f, h, k, l, m, n, p, q, s, t, x, z*, are like the English.

12. *D*, between two vowels, or at the end of a syllable in which it follows a vowel, sounds like *th* in *this*; it is not sounded after a consonant.

13. *G* is always hard; at the end of a word it is sounded very slightly, so as to resemble *h*; thus, *AALBORG* is pronounced nearly *ol'-bor'h*. Preceded by *n*, it gives a nasal sound to that letter.

14. *J* is like the English *y*, (consonant).

15. *R* is similar to the German.

16. *V* is usually like the English, but it appears to have a vowel sound after *a*; thus, *havn* is pronounced almost *hawn*.

17. *W* is found only in words borrowed from the German, and has the sound of *v* as in that language.

III.

DUTCH.

A Teutonic language of the Low-German class, spoken by the natives of Holland.

1. The vowels *a, e, i, o*, and *u* are similar to the German, and have each at least two sounds, as in that language.

2. *Y* is like long *i* in English, as in *nigh*.

Obs. *Ij* is sometimes made use of instead of *y*; thus, *OVERYSSEL* is not unfrequently written *Over-ijssel*.

3. *Äe* is equivalent to *aa* or long *â*.

4. *Je* sounds like *ee* in English, or *i* in Italian.

5. *Oe* sounds like *oo*, or *u* in Italian.

6. *Oo* sounds like *ô* long.

7. *Ui* or *uy* is similar to *oi* in English.

8. The consonants *b, c, f, h, k, l, m, n, p, q, r, s, t, x, z*, are similar to the English.

9. *D*, at the end of a word, is like *t*; in other cases it is the same as in English.

10. *G* resembles in sound a strongly aspirated *h*, or the German *ch*. When united with *h*, in the form *gh*, it sounds like *g* in the word *go*.

11. *J* is equivalent to the English *y*, (consonant).

12. *V*, at the beginning of a word or name, usually sounds like *f*, as in German.

13. *W* is somewhat like the German, but softer. In the word *nieuw*, followed by a consonant, as *NIEUW-POORT*, (written also *NIEUPOORT*.) it is silent.

14. *Ch* is similar to the German *ch*. (15.) *Sch*, however, has not, as in German, the sound of the English *sh*, but the pure sound of *s*, followed by the guttural *ch*, resembling *sk* in English.

Obs. The FLEMISH is so closely allied to the Dutch, that it may be regarded as essentially the same language.

IV.

FRENCH.

A Romance language formed by the Latin engrafted on Celtic.

1. *A*, in French, is generally considered to have two sounds: the first long, as in the English word *far*, *e. g.* in *pas*; the second short, almost like *a* in *fat*, *e. g.* in *bal*. *A* circumflexed, (*â*), however, has a sound broader than the *a* in *pas*, being intermediate between that in *far* and that in *fat*.

Obs. The French *a* would frequently seem to be intermediate between its second English sound and that of short *u*. However this may be, the French writers often employ *a* in spelling oriental names, when the English make use of *u*; thus, in *CUTCH*, (Fr. *Catch*); *FURUKABAD*, (Fr. *Farrakâbâd*); *MUSKAT*, (Fr. *Mascate*).

2. *E* has three sounds: (1.) *close*, like *a* in *fate*, *e. g.* in *âle*; (2.) *open*, nearly as in *met* or *ebb*, but more prolonged, *e. g.* in *procès* and *tête*;¹ (3.) *obscure*, as in *battery*, *e. g.* in *retour*, *devrai*.² At the end of polysyllables it is generally entirely mute.

3. *I* has two sounds: the first short, and nearly as in the English word *fig*, *e. g.* in *îl*, *ami*; the second like *i* in *field*, or *marine*, *e. g.* in *gîte*. This

¹ In pronouncing this sound, the mouth must be freely opened, whence the name.

² The *e* in these and similar cases is often scarcely sounded at all, and appears to pass imperceptibly into *e* mute; *retour* and *devrai* may be pronounced *r'toor* and *d'vray*.

second sound may be represented by *ee* as in English, or *i* in Italian.

4. *O* has three sounds: (1.) long, nearly as in *robe*, e. g. in *trône*; (2.) as in *rob*, e. g. in *parole*; (3.) as in *lord*, e. g. in *corps*.

Obs. *O* circumflexed, in French, has a deeper and fuller sound than *o* long in English. No English vowel or vowels accurately indicate this sound.

5. The sound of the French *u* has no equivalent in English. It may be said to be intermediate between *ee* and *oo*; but it can be learned from an oral instructor only.

Obs. *U*, before *n*, nasal, has its second English sound nearly, *un* being pronounced almost *ang*.

6. *Y* single is similar to the French *i*; but between two vowels is like double *i*.

7. *Ai* is like *è*, or *e* open.

8. *Au* is like *è*.

9. *Ei* is like *è* in *there*.

Obs. In giving the pronunciation of French names in which *ai* or *ei* (not followed by *n* nasal) occur, e. g. *LORRAINE*, *SEINE*, &c., we sometimes represent the sound of these diphthongs, by *a* or *ai*, because this is the usual mode of anglicizing such names. But with regard to places less known, the sounds *ai* and *ei* are rendered by *e*, sounded as in *met*. In these latter instances the sound of *e* should be somewhat prolonged, the mouth at the same time being freely opened.

10. *Eu* is similar to the English *u* in *tub*, but the sound is more prolonged, nearly resembling *u* in *fur*.

Obs. *Eu*, in the different parts of the verb *avoir*, always has the sound of simple *u*.

11. *Ie* is like *ee* in English, or the Italian *i*.

12. *Oi* usually sounds like *wa*, e. g. *moi* is pronounced *mwa* or *mwoh*.

Obs. *Oi* was formerly used in the termination of the French verbs, e. g. *avois*, *avait*, *avoient*; also in the final syllable of a number of adjectives, as *Polonois*, and *Lyonnais*. The *oi* in these words—which are now usually written *avais*, *avait*, *avaient*, *Polonois*, *Lyonnais*—sounds like *ai*, (or *è*.)

13. *Ou* sounds like *oo* in English, or *u* in Italian.

14. *B*, *d*, *f*, *k*, *p*, *t*, *v*, and *z*, are the same as in English.

15. *C* has the sound of the English *k* before *a*, *o*, *u*, and before consonants. It has the sound of *s* hard before *e*, *i*, and *y*; and before *a*, *o*, and *u* when written with a cedilla *c*.

16. *G*, before *a*, *o*, and *u*, is hard, as in the English word *gap*; before *e*, *i*, and *y*, it is soft, having the sound of *zh*, or of *s* in *pleasure*. *Gu* sounds like *g* hard; thus, *gué*, *guide*, are pronounced *ga*, *gheed*. *Gn* is like *ni* in the English word *onion*. Final *g* is silent, except in the noun *bourg*, and in names terminating in *berg*, where it sounds nearly as *k*.

17. *H* is never pronounced in French so forcibly as in English. Some orthoepists say that *h* has no sound in French.

18. *J* sounds like soft *g* in French, or *zh* in English, or *s* in *azure*.

19. *L* has usually the same sound as in English; but when it ends a word, being preceded by *i*, or when *ll* follows *i*, in any situation, it usually has what is called its *liquid* sound. This may be said to answer nearly to the sound of *li* in *million*, the sound of *l* in such cases being blended with that of *y*, (consonant; thus *papillon* is pronounced *pa'-peel'-yong'*; *CHANTILLY*, *shong'-teel'-yee'*, &c. According to the present practice of the more polite French speakers, the sound of *l* is scarcely heard at all in such words, the long *ee* sound being substituted for it; so that their pronunciation might rather be indicated thus—*pa'-pee'-yong'*; *shong'-tee'-yee'*.

20. *M* and *N*, when followed by a vowel, or when

double, have the same sound as in English; but when at the end of a word, (not immediately followed by another word beginning with a vowel,) or when followed by another consonant, in the middle of a word, they have what is termed the *nasal* sound, which resembles that of *ng*, as in *long*, *pang*, &c., but is somewhat softer;³ thus, *m* and *n* are nasal in such words as *comparer*, *contexte*, but have their natural sound in such as *commune*, *conas*. *MELUN*, before a consonant, or standing by itself, would be pronounced almost *m'lune*; but if followed immediately by a vowel, as in the sentence, *Melun a six mille habitants*, the final *n* is sounded distinctly like *nn*. The pronoun *sien*, when not followed by a vowel, is pronounced nearly *se-ang'*; but when it takes the feminine termination, the *n*, being doubled, has the same sound as in English, so that *sienne* is pronounced *se-enn'*.

M or *n*, nasal, when preceded by *e*, usually causes this vowel to assume the broad sound of *a*: thus, *denis*, *sons*, are pronounced like the French words *dans* and *sans*, almost as if written in English *dong* and *sing*.

21. *In*, *im*, *ain*, *aim*, *ein*, *ois*, and *en*, preceded immediately by *i*, when nasal, have a sound nearly resembling that of *ang* in the English word *pang*. In such cases, *in*, *im*, *ain*, *aim*, *ein*, and *en* are pronounced like *ang*; the *o* in *ois* has the sound of our *w*, so that *lois* and *sois* are pronounced almost *loang*, *soang*.

22. In *on* and *on*, nasal, the *o* is long, as in *won't*.

23. *Q* or *qu*, in French, always sounds like *k*, e. g. *quel* is pronounced *kel*; *qui*, *kee*.

Obs. *Q*, in French words, (except when terminal, as in *coq* and *cing*.) is always followed by *u*, though it is sometimes employed without this letter in writing certain foreign names. Thus Balbi and several other authors, both French and English, write *Qené* for *KENEH*; *Qoum* for *KOOM*, &c. In such cases, *q* is used to denote a sound like that of *k*, but somewhat more guttural.

24. *R* is like the English, but is trilled more strongly, especially when it precedes another consonant, or stands at the end of a word, as in *ceux*, *pauvre*: in similar cases, the English *r* is but very slightly sounded.

25. *S*, when single and between two vowels, sounds like *z*, or as in the English words *rose*, *please*. In other cases, it has the hard sound of *s* in *sister*. At the ends of words, it is, with few exceptions, silent.

26. *X* generally has the same sound as in English, but is sometimes sounded like *s*, e. g. in *six*, pronounced *seece*, and *Bruxelles*, (Brussels,) pronounced *bru'-sell*; and occasionally like *z*, as in *dirigéme*, *dee'-ze-ain'*. Final *x* is silent.

27. *Ch* is like *sh* in English: followed by a consonant, and at the end of a word, it sounds like *k*. The sound of the English *th*, as in *this*, has no equivalent in French; but is represented by *t* hard.

28. *Gn* (the same as in Italian) has a sound which blends that of *n* and *y*, (consonant,) or, in other words, is equivalent to the sound of *ni* in *minion*. Thus, *AVIGNON* is pronounced *a'-veen'-yong'*.

29. SILENT LETTERS.—The vowel *e* at the end of a word, when not marked with an accent, is invariably mute, e. g. in *parle*, *contente*, &c.

³ In uttering this sound, care should be taken not to press the back part of the tongue against the palate, as is done in pronouncing the English *ng*.

⁴ The particles *le*, *ne*, and the pronouns *je*, *me*, *te*, &c. are perhaps, strictly speaking, exceptions; but though the *e* in these words is not always absolutely mute, it is very often so; thus, the sentence *vous me trouverez le même*, is pronounced *room' troov' rel'*

30. The French consonants, when occurring at the end of a word, are generally not pronounced, unless they are immediately followed by a word beginning with a vowel, *e. g.* in *content*, *Bordeaux*, and *dents*. If, however, they are followed by a mute *e*, or any other vowel, they must always be articulated, *e. g.* in *contente*, *denié*, &c.

Obs. 1. The letters *c*, *f*, *l*, and *r* are, when final, very often pronounced; *e. g.* in *avec*, *neuf*, *il*, and *punir*.

Obs. 2. The French articulate the final consonants in almost all foreign and classical names, *e. g.* in *AMSTERDAM*, (*m* not nasal,) *VENUS*, &c.

ACCENT.—It may be observed that the French language has no accent in the sense in which we employ this term. The marks called *accents*, that are placed over the different vowels, serve only to indicate some particular sound of these letters, and not that peculiar impulse of the voice which characterizes an accented syllable in the English and most other European tongues. Thus, the accent over the *e* in *parlé*, serves to show that this vowel has its first French sound, and at the same time distinguishes it from *parle*, another form of the same verb, in which the *e* is mute. The circumflex imparts to the vowels over which it is placed a longer and deeper sound than ordinary; *e. g.* in *hâte*, *tempête*, *gîte*, and *apôtre*.

It is commonly said that the French pronounce all the syllables of a word with an equal stress of voice, but that they *seem*, to an English ear, to accentuate the last, because, in our language, the universal tendency is to throw the accent toward the beginning of the word. Others maintain that in pronouncing words of a number of syllables, the voice of a native French speaker almost invariably rises and dwells on the last, and that this peculiar terminal intonation is analogous, and nearly equivalent, to our accent. With very few exceptions, the principal accent may be placed on the last syllable of French geographical names; at the same time secondary accents may be used in order to prevent certain syllables from being pronounced too slightly or indistinctly, as is usually the case with unaccented syllables in English. The pronunciation of *ORLÉANS*, for example, may be thus given—*or-lé-ang'*. Care should be taken not to break such names into as many isolated sounds as there are different syllables; but, while pronouncing these syllables with a stress of voice nearly equal, to let each glide smoothly into that which follows it. It may be observed, that the French, in uttering short sentences, usually make the different words run into each other, as if they were parts of the same word.

V.

GERMAN.

A Teutonic language divided into two principal branches; the High German and the Low German.

1. *A*, in German, usually sounds as in the English word *far*, though sometimes approximating to the *a* in *fat*.

2. *E*, when long, sounds like *a* in *fate*; when short, like *e* in *met*: frequently, however, it has an obscure sound, like *e* in *battery*.

3. *I*, long, sounds like *i* in *marine*, (as *i* in Italian, or *ee* in English;) *i*, short, like *i* in *pit*.

4. *O*, long, is like that in *no*; *o*, short, like that in *on*.

5. *U*, long, is like *oo* in *bull*, *full*; *u*, short, like *oo* in *good*.

6. *Y* sounds like the German *i*.

mame, the vowel in *me* and *ne* being entirely suppressed, and the consonants attached to the preceding words.

7. *Ä* or *ä*, is similar to the German *e*, or to the English *a* in *fate*, or *ai* in *air*.

8. *Ö*, or *ö*, nearly resembles the French *œu* in *œuvre*, but has no parallel sound in English. The sound nearest to it is that of *e* in *her*, or *u* in *fur*. The German poets often rhyme it with *e*, (*a* or *e*.)

9. *Ue*, or *ü*, is like the French *u*. Its sound is not found in the English language.

10. *Au* is equivalent to the English *ou* in *our* or *out*; but somewhat broader, giving predominance to the sound of *a*.

11. *Au* and *eu* resemble in sound the English *oi*, as in *oil* or *boil*; only somewhat approaching in its termination to that of the English *oo*.

12. *Ei* and *ey* have the sound of *i* in *mine*, or *ey* in *eye*.

13. *Ai* and *ay* are similar to the preceding, but somewhat broader.

Obs. It may be observed that *ai* and *au*, in German, as well as in several other languages, are *proper* diphthongs, the vowels preserving their distinct and proper sound; thus *ai* is equivalent to *a'-e*, and *au* to *a'-oo*, in English.

14. *Ui* sounds like *oo-e*.

15. *Ie* is equivalent to *ee* in English, or *i* in Italian.

16. The consonants *f*, *k*, *l*, *m*, *n*, *p*, *q*, *t*, and *x* are pronounced as in English.

17. *B* and *d*, at the beginning of a word, have the same sound as in English. At the end of a word, and after the vowel of the syllable to which it belongs, *b* is pronounced like *p*; thus *lob* is pronounced *lop*; *ersee*, *erbee*. *D*, at the end of a word is pronounced like *t*; thus *Brodt*, pronounced *brot*.

18. *C*, before *a*, *o*, and *u*, sounds like *k*; before *e*, *i*, and *y*, like *t*.

19. *Ch* has a sound in German unknown in our language, and which, consequently, can be learned from an oral instructor only. It somewhat resembles that of our *h*, with a strong aspiration: after *a*, *o*, and *u*, it is guttural; for example, in the word *ach*.⁵ When it follows *e*, *i*, *ä*, *ö*, *ü*, *äu*, or *eu*, it seems to be sounded more in the palate, as in *ich*.⁵

Obs. *Ch*, before *s*, *radical*, (*i. e.* forming a part of the root of the word,) has the sound of *k*; thus *Ochs* is pronounced *oks*; *Sachsen*, *sak'-sen*, &c.

20. *G*, at the beginning of a word, sounds as in the English word *get*. In other situations, it should be pronounced nearly like the German *ch*. In some German dialects, however, it is sounded, in all cases, nearly like *g* hard, in English.

21. *H* is pronounced only when it begins a word, or at the beginning of the radical syllable.

Obs. 1. When *g* and *h* occur in the middle of a compound word, they have the same sound as when they are initial, provided they begin any part which is a complete word in itself; thus, in the participle *gegeben*, the latter *g* has the same sound as the former, because it begins the verb *geben*, from which that participle is derived. *H*, in similar instances, is pronounced; *e. g.* in *gehabt*, *aufgehalten*, &c.

Obs. 2. *G* and *h*, occurring after a vowel, lengthen its sound; *e. g.* in *Tag*, *Zahl*, *Floß*, pronounced *tag*, *tsahl*, *floh*, &c.

22. *J* has the sound of the English *y*, (consonant,) in *yes* or *you*.

23. *Q* is only used before *u*, and sounds as in the English word *quit*.

⁵ Those who have no opportunity of acquiring this sound from a German, might perhaps learn it from a Scotchman, as the Scotch *ch*, in the word *loch*, is essentially the same with the German, though pronounced somewhat more strongly.

24. *R* is pronounced like *r* in the English word *terror*, but somewhat more strongly.

Oss. Care should be taken to pronounce the *r*, in German, distinctly and forcibly. In such words as *berg* and *werth*, the learner should be particularly on his guard against allowing the *e* to become like short *u*, as in similar words in English. The *e*, in such cases, should have the same sound as in our word *merit*, so that *berg* should be pronounced almost as if written *bairg*, (not *burg*); *werth*, as *wairt*, (not *wurt*.) but somewhat shorter.

25. *S*, at the beginning of a word, or between two vowels, is like *s*; in other cases it is sharp or hard, as in *this*. *Ss* is always sharp.

26. *Sch* sounds like the English *sh*; *ss* like *ss*.

27. *Th* is pronounced like *t*, as in most other languages.

28. *V* sounds like *f* in English, except when between two vowels; it is then usually pronounced like our *v*.

29. *W* resembles our *v*, but in pronouncing it the upper teeth should not be allowed to touch the lower lip, as is done in uttering the English *v*.

30. *Z* and *tz* sound like *ts*.

The following table exhibits the mode of representing English vowel sounds by German letters:

The English.	German.
<i>a</i> in <i>bare</i> is represented by <i>ä</i> or <i>e</i> , and would be written <i>bär</i> or <i>ber</i> .	
<i>a</i> in <i>all</i>	<i>ee</i> or <i>eh</i> eel or ehl.
<i>a</i> in <i>far</i>	<i>a</i> far.
<i>a</i> in <i>at</i>	no equivalent.
<i>e</i> in <i>mere</i>	<i>i</i> or <i>ie</i> mir or mier.
<i>e</i> in <i>met</i>	<i>e</i> male.
<i>i</i> in <i>fine</i>	<i>ei</i> or <i>ey</i> fein.
<i>i</i> in <i>file</i>	<i>i</i> file.
<i>o</i> in <i>hole</i>	<i>o</i> hohl.
<i>o</i> in <i>for</i>	<i>o</i> for.
<i>o</i> in <i>do</i>	<i>u</i> du.
<i>u</i> in <i>bull</i>	<i>u</i> bull.
<i>u</i> in <i>uniform</i>	<i>ju</i> juniform.
<i>u</i> in <i>hut</i>	no equivalent.
<i>oi</i> in <i>oil</i> nearly by <i>äu</i>	<i>äul</i> .
<i>ou</i> in <i>out</i> nearly by <i>au</i>	<i>aut</i> .

The equivalent consonantal sounds are:

English.	German.
soft <i>ch</i> represented by	<i>tsch</i> .
<i>j</i> and soft <i>g</i>	no equivalent.
<i>f</i>	<i>f</i> or <i>v</i> .
<i>s</i>	<i>ss</i> .
<i>sh</i>	<i>sch</i> .
<i>th</i> in <i>think</i> or in <i>that</i>	no equivalent.
<i>v</i> nearly by <i>w</i>	<i>w</i> .
<i>w</i>	no equivalent.
<i>x</i>	<i>x</i> or <i>chs</i> .
<i>y</i> in <i>yes</i>	<i>j</i> (<i>jess</i>).
<i>z</i>	no equivalent.

Oss. No general rule can be given for the accent of German words or names: it may be remarked, however, that the penultimate accent occurs much less frequently than in the Spanish or Italian languages.

VI.

MODERN GREEK OR ROMAIC.

The modern Greek is the representative of the ancient Hellenic dialects. This modern dialect of the Greek tongue, though modern in name and form, approaches much nearer the Greek or Homer's time than does Italian, Latin; or Dutch, German. Most of its grammatical forms can still be recognised by a classical scholar; the ancient declensions are still preserved in it; and even the conjugation

of the verb hardly presents any new elements. Modern scholars are now beginning to be of opinion that the best "living conception of what the spoken Greek language really was in its best days" may be obtained amongst the modern Greeks.

1. *A* α (alpha) like *a* in *far*.
2. *E* ε (epsilon) like *a* in *fate*.
3. *H* η (eta) like *ee* in English.
4. *I* ι (iota) like *e* in *me*, or *i* in *pie*.
5. *O* ο (omicron) like *o* in English.
6. *Υ* υ (upsilon) nearly like the French *u*, (or *ü*.)
7. *Ω* ω (ömëga) like *o* in English, there being no difference between this and *omicron* in prose; in poetry *ω* is longer.
8. *Λ* λ like *a* in *fate*.
9. *Ξ* ξ and *ν* sound like *es* in the English *seen*, *x* the Italian *i*.
10. *Ου* like our *oo* in *boom*, or the Italian *u*.
11. *Β* β (bëta) like *v* in English.
12. *Γ* γ (gamma) like *g* hard, as in *get*.
13. *Δ* δ (delta) like *th* in *this*.
14. *Ζ* ζ (zëta) like the English *s*.
15. *Θ* θ (thëta) like *th* in *thin*.
16. *Κ* κ (kappa) like *k*.
17. *Λ* λ (lambda) like *l*.
18. *Μ* μ (mu) like *m*.
19. *Ν* ν (nn) like *n*.
20. *Ξ* ξ (xi) like *x*.
21. *Π* π (pi) usually like the English *p*; but after *μ* (m) it is like *b*; thus *ἑμπερος* is pronounced *em'bo-ros*.
22. *Ρ* ρ (rho) similar to the German *r*.
23. *Σ* σ (sigma) like the English *s*.
24. *Τ* τ (tau) usually like the English *t*; after *ν*, (*n*), however, it is sounded like *d*; e. g. *ντρίς* is pronounced *en-dos*.
25. *Τ* υ (consonant) when before a vowel, or the liquids *l*, *m*, *n*, *r*, is like our *v*; e. g. *αἰγύς* is pronounced *av-a-rü'o*, *αἰλῆς*, *av-lös*, *αἰών*, *av'-re-on*: in other cases it is like *f*; e. g. *Λυσάνδρις* is pronounced *lef-ka-thee'a*.
26. *Φ* φ (phi) is equivalent to our *f*.
27. *Χ* χ (chi) is similar to *ch* in German.
28. *Ψ* ψ (psi) is like *ps* in English.

Oss. Recently it has become the practice to give the islands, towns, &c. of modern Greece, their ancient names; and it is probable that at no distant period such modern corruptions as *Theaki* for *Ithaca*, *Scio* for *Chios*, may be regarded as obsolete.

VII.

HUNGARIAN.

1. *A*, unaccented, is like *o* in *not*; with an accent, (*á*), it has the sound of *a* in *far*, and is always long; thus, *ABA* UL-VAR, the name of a town, is pronounced *ob-ah oo-e var*.
2. *E*, unaccented, is like *e* in *met*; with an accent, (*é*), it has a sound intermediate between *e* in *met* and *i* in *pie*, but more prolonged, somewhat like the *e* in *help*.
3. *I*, and *y* when a vowel, are similar to *e* in *me*, or *i* in *fig*.
4. *O*, without an accent, is the same as in English; when accented, (*ó*), it has a longer and deeper sound.
5. *U*, without an accent, is like *oo* in English, or the Italian *u*; with the accent, (*ú*), its sound is fuller and deeper.
6. *Ö*, or *ö*, and *ü*; are the same as in German.
7. The consonants *b*, *d*, *f*, *h*, *k*, *l*, *m*, *n*, *p*, *t*, *v*, *z*, are like the English.
8. *C* is not used without being joined with some other consonant; *cs* is sounded like *ch* in English; *cz* like *ts*.

9. *G*, except when followed by *j* or *y*, is always hard, as in the English word *get*. *Gh* sounds like a simple *g*. *G* followed by *j* or *y* sounds like *dj*, *dy*.

10. *J* is usually like *e* in English; *wj* is pronounced *oo-e*. *Dj* and *gj* are equivalent to *dy* and *gy*, and *tj* to *ty*.

11. *R* is like the German; in other words, is to be trilled more strongly than the English.

12. *S* is like the English *sh*.

13. *Sz* is like *s* sharp, or *ss*.

14. *Ts* is equivalent to *cs*, or *ch* in English.

15. *Tz* is like *cs*, or *ts* in English.

16. *F*, in Hungarian, is nearly always a consonant. When it follows *d*, *g*, *l*, *n*, and *t*, it seems to be blended with these letters, so as to form but one consonant sound.

17. *Dy* and *gy* are alike. *Magyar* is pronounced *madd-yor*.

18. *Ly* is like *l* in Spanish, or *li* in the English word *million*. *VASSARHELY* is pronounced in three syllables—*va-shar-hel*.

19. *Ny* is like the Spanish *n*, or *ni* in *minion*. *MARTONY* is pronounced in two syllables—*mar-ton*.

20. *Ty* approximates to the sound of our *ch*, bearing the same relation to *t* that *dy* does to *d*.

21. *Zs* sounds like the French *j*, or *zh* in English.

Obs. The Hungarian language cannot be said to have any accent, in the sense in which we employ this term: the syllables of words, however, are distinguished from each other by *quantity*.

VIII.

ITALIAN.

1. *A*, in Italian, is like the English *a* in *far*, though its sound varies somewhat in different situations.

2. *E* has two sounds: (1.) close, as *a* in *fate*; (2.) open, like *e* in *met*.

3. *I* is like *e* in *me*.

4. *O* has two sounds: (1.) close, as in *note*; (2.) open, similar to *o* in *not*, but rather broader.

5. *U* is like *oo* in English.

6. *Ai* and *au*, in Italian, are *proper* diphthongs. Accordingly, *CAIRO* is to be pronounced *ki-ro*, and *AUSA*, *dw'-sa*, &c.

7. The consonants *b*, *d*, *f*, *l*, *m*, *n*, *p*, *q*, *s*, *t*, and *v* are similar to the English.

Obs. *K*, *w*, *x*, and *y* are not used by the Italians, except in spelling foreign names.

8. *O* and *oc*, before *a*, *o*, and *u*, are sounded like *k*; before *e*, and *i*, and *y*, like *ch* in *cherry* or *chilly*.

Obs. *Cc* should be pronounced more strongly than a single *c*. This remark will apply to all double letters in Italian, as well as in most other languages.

9. As *c*, when immediately before *a*, *o*, or *u*, is never pronounced like *ch*, in order to express this sound in such cases, the vowel *i* is inserted; thus, *cia*, *cio*, *cis*, are pronounced *cha*, *cho*, *choo*. See table below.

10. *Ch* is employed to express the sound of *k* before *e* and *i*.

11. *G*, before *a*, *o*, and *u*, is hard, as in the English word *get*; before *e*, *i*, and *y*, it sounds like the English *j*: *gia*, *gio*, *giu*, are pronounced *ja*, *jo*, *joo*. See table below.

6 There are a number of niceties in Italian pronunciation which, however interesting to a linguist, cannot be noticed in an outline like the present. The difficulty of giving a brief, and, at the same time, a satisfactory exposition of the principles of this language, is increased by the existence of different dialects in different parts of Italy. It has been deemed sufficient, in this synopsis, merely to explain those principles of pronunciation which appear to be recognised by the Italians generally.

12. *Gh* is used to express the sound of hard *g*, before *e* and *i*.

13. *Ghi* has the sound of the liquid *l*, or of *li* in *million*; thus, *BOGLIO* is pronounced *bole'-yo*, or *bol'-yo*.

14. *Gn* has the same sound as in French; or, in other words, is like the Spanish *n*; e. g. *BOLOGNA* is pronounced *bo-lon'-ya*.

15. *H* is never sounded in Italian.

16. *J*, at the beginning of a syllable, is like the English *y*, (consonant;); at the end of a word it is equivalent to *i* (Italian).

17. *R* resembles the French, but is trilled somewhat more strongly.

18. *Sc*, before *e* and *i*, is like the English *sh*; thus *SCIO* is pronounced *Shoe'-o*.

19. *Z* commonly has the sound of *ds* in English, or of the *ds* in *Windsor*; *zz* is pronounced like *ts* in *benefits*.

The following table will perhaps enable the reader more readily to understand the mode in which *c* and *ch*, *g* and *gh* are employed by the Italians:

ca is pronounced ka.	ga is pronounced ga.
che " ka.	ghe " ga.
chi " ke.	ghi " ghe.
co " ko.	go " go.
cu " koo.	gu " goo.
cia " cha.	gia " ja.
ce " cha.	ge " ja.
ci " che.	gi " je.
cio " cho.	gio " jo.
ciu " choo.	giu " joo.

Obs. 1. In Italian, the accent of word ending in a vowel is usually on the penultima; but to this general rule there are many exceptions.

Obs. 2. It may be observed that, in consequence of the position of Italy, and its former extensive and intimate commercial relations with the Levant, a great number of the geographical names of Greece, Syria, and Egypt, as well as many of those along the southern shore of the Mediterranean, are written in the Italian mode, and should be pronounced according to the principles of this language; e. g. *CORFU*, *TRIPOLIZZA*, *SCIO*, *JAPPA*, *CAIRO*, &c.

Obs. 3. Italian words being pronounced exactly as they are written, and having no silent letter except *h*, while every vowel preserves its proper sound, independently of the consonants which accompany it, many modern geographers have adopted its vowel sounds in the writing of foreign names, as the best substitute, upon the whole, for that desideratum in a geography of true phonetic character.

IX.

NORWEGIAN.

As a written language, the Norwegian may be said to be identical with the Danish, since not only the grammar, but, with very few exceptions, the words of both are precisely the same. In pronunciation, however, the Norwegians differ widely from the Danes, while these, again, differ considerably among themselves. Under Section II. we have given the elements of Danish pronunciation, as the language is spoken by the educated classes in Copenhagen. The principal points of difference between this and the Norwegian appear to be the following: (1.) *d*, in the latter tongue, always has its proper sound, while in the Danish it is often pronounced like the English *th*; (2.) *g*, at the end of a word, in Norwegian, is to be sounded distinctly as *g* hard in English; (3.) *o*, ending a syllable, is pronounced like our *oo*; (4.) *e*, at the end of a word, always retains its distinct sound; thus, *ORKAN* would be

pronounced *oo'-den-esh*, and not *o'-den-esh*, as in Danish.

X.

POLISH.

The Polish, or Lekhian, spoken in ancient times beyond its present limits, in parts of Pomerania and Silesia, is a dialect of the Slavonic or Windic.

1. *A* sounds as *a* in the English word *far*.
2. *E*, without an accent, like *e* in *met*; with an accent, (*é*) like *a* in *fate*.
3. *I* as in *marine*.
4. *O*, unaccented, as in *note*; with an accent, like *oo* in *good*, or *öb*.
5. *U* is like *oo* in *moon*.
6. *Y* resembles *e* in *me*, but is more guttural, being similar to *i* in *pin*.
7. The consonants *b, d, f, g*, (always hard,) *k, l, m, n, p, s*, (always sharp,) *t* and *z*, are essentially the same as in English.
8. *O* in all cases, even before *a* or *o*, sounds like *ts* in English; *cs* is equivalent to our *ch*; *ch* is like the German *ch*.
9. *J* is like the German, being equivalent to *y*, (consonant).
10. *R* is like the German.
11. *W* is similar to the German, resembling our *v*.
12. *N*, with an accent over it, (*n'*) sounds like the Spanish *n*.
13. *S*, marked in a similar manner, (*s'*) has a sound blending that of *s* and *y*, (consonant). *S'* has a sound which cannot be given in English: its nearest approximation in our language is *ste*.
14. *Se* is equivalent to *sh* in English.
15. *Z*, with a point over it, is like the French *j*, or *zh* in English.
16. *Z*, with an accent (*z'*) is somewhat similar to the above, but has no equivalent in our language.

Obs. 1. The accent in Polish words or names of more than one syllable, is always on the penultima. In Russian, however, it is almost always on the last syllable.

Obs. 2. The sounds of the letters in Slavonian, Bohemian, and Illyrian correspond, with very slight exceptions, to those of the Polish language.

XI.

PORTUGUESE.

1. The vowels *a, e, i, o, u*, and *y*, and the diphthongs *ai, ay, au*, are essentially the same as in Spanish.
2. *Lo* is pronounced almost *long*.
3. The consonants *b, d, f, l, m, n, p, s, t, v*, and *z* are similar to the English.
4. *C* is the same as in French, differing from the English only by sometimes having the cedilla.
5. *Ch* is the same as in French; or, in other words, is like our *sh*.
6. *G* and *j* are the same as in French.
7. *H*, in Portuguese, is always silent. When, however, it follows *l* or *n*, it renders these letters *liquid*; thus, *filho* is pronounced *feel-yo*; *sen-hora*, *sane-yo'-ra*, &c.
8. *M*, frequently, and *n*, sometimes, has a nasal sound. *Sam*, like *sao*, is pronounced almost *soung*; *alem* or *alen* sounds like *a-lenf*.
9. *Qu* is pronounced as in French, the *u* in this case not being sounded.
10. *R* is like the French.
11. *X* is sounded like *ch* in Portuguese, or *sh* in English.

7 *Ei* and *ey* are almost the same as in Spanish, but have a sound sometimes approaching to the English long *i*.

Obs. In Portuguese, the general rules of accentuation are similar to those in the Spanish language.

XII.

RUSSIAN.

The Russian language is a dialect of Slavonic; and is subdivided into three distinct dialects, that of the GREAT RUSSIAN, now the literary and official language of Russia; the LITTLE RUSSIAN, a compound of the Great Russian and the Polish; and the WHITE RUSSIAN, formerly the official language of Lithuania. Till the time of Peter the Great, the Russians employed an alphabet invented by Cyrilus, a Greek monk of the 9th cent., and taken chiefly from the Greek, with some signs added to it, to represent sounds peculiar to the Slavonic dialects, such as:

the *s* in *pleasure*, or *j* in the French *jamais*,
sh in *she*,
te in *benefit*,
ch in *church*,
o in *work*,
i in *bird*,
on in the French *balcon*,
ea in *yea*,
is (nasal) as in the French *enfin*,
and a whole class of vowel characters to represent the initial *y*, as in *ya* in *Yarmouth*,
yu in *yule*,
yee,
ien in the French *bien*,
ion in the French *nation*.

Peter the Great struck off 9 letters of the ancient alphabet, and gave the rest a more rounded form.

Obs. As the Russians neither employ Roman characters, nor those which can be readily converted into corresponding Roman letters, in writing the geographical names of Russia, the mode adopted with respect to oriental names is perhaps the best.

XIII.

SPANISH.

1. The Spanish *a* sounds as in the English word *far*; *e* like *a* in *ale*; *i* like *e* in *mete*; *o* as in English; *u* like *oo*; and *y* like Spanish *i*.
2. *Ai* and *ay* are like long *i* in English. *Au* sounds like *ou* in *our*. *Ei* and *ey* are pronounced *a'-e*.
3. The consonants *f, l*, (single,) *m, n, p, s, t*, and *v* are pronounced nearly as in English.
4. *B*, at the beginning of a word, sounds as in English; but when between two vowels, its sound somewhat resembles that of *v*, but with this difference—*v* is pronounced with the upper teeth placed against the under lip, while the sound of the Spanish *b* is formed by bringing the lips loosely or feebly into contact. This sound seems to be between that of *b* and the English *w*.
5. *C*, before *a, o*, and *u*, is pronounced as in English; before *e* and *i*, it has the sound of *th* in the word *this*. In the Catalan dialect it is the same as in English.
6. *Ch* has the same sound as in English, except in the dialect of Catalonia, where it is pronounced like *k*.
7. *D*, at the beginning of a word, is sounded nearly as in English, but is pronounced with the tip of the tongue against the upper teeth, while in pronouncing the English *d*, the tongue is made to touch the roof of the mouth. At the end of a syllable, or between two vowels, *d*, in Spanish, sounds like the English *th* in *this*, but is somewhat softer.

8. *G*, before *a*, *o*, and *u*, is hard, as in English.

9. *G*, before *e* and *i*, and *j* before every vowel, are pronounced like a strong guttural *h*, similar to the German *ch* in *ach*, which confers a force and manliness that is far from being disagreeable. The *g*, *j*, and *x*, before vowels are generally written now with *j*. Thus *XIMENEZ* is now generally written *JIMENEZ*.

10. *Gua* and *guo* sound somewhat like *gwa*, *gwo*, but the *g* is so soft that it is scarcely perceived; so that in these cases the sound of *gu* seems to approximate very nearly to that of the English *w*. *Gu*, before *e* and *i*, is usually sounded like *g* hard; thus, *GULANA* is pronounced *ghe-a-na*. When, however, the *u* is marked with a disresis, thus, *gúi*, these two letters have the same sound as when before *a* or *o*, and consequently *gúi* is pronounced *gwo* or *we*. See table at the end of this section.

11. *H*, in Spanish, is never pronounced, except in words beginning with *hue*, and then very slightly.

12. *J*: for this letter, see 9 and 18 of this Section.

13. *Ll* (now sometimes written *l*) has a sound which combines that of *l* and *y*, (consonant,) and is similar to the liquid *l* in French; thus *villa* or *vila* is pronounced *veel'-ya*; *LLERENA*, *lya-ra'-na*.

14. *N*, in similar manner, unites the sounds of *n* and *y*, and is like *gn* in French; thus, *pena*, is pronounced *pen'-ya*, or *pane'-ya*.

15. *Q*, in Spanish, is always followed by *u*. *Qu*, before *a* and *o*, is sounded as in English, or, in other words, is equivalent to *kw*; before *e* and *i*, it is pronounced like *k*, unless the *u* be marked with a disresis, in which case it is like *kw*. See table at the end of this section.

16. *R* is similar to the French, but is trilled more strongly.

17. *T* is to be pronounced by putting the tip of the tongue against the upper teeth.

18. *X* is usually sounded like the Spanish *j*, which letter, according to the present mode of spelling, has, we have remarked, been generally substituted for it; thus, instead of the old spelling, *XIMENES*, *XUCAR*, &c., we now see *Jimenes*, *Jucar*, &c. *X*, before a consonant, or before a vowel marked with this sign *^*, is sounded as in English: Example—*Exterior*, *Exáminar*.

19. *Z* is to be pronounced like *th* in *thin*.

The following table may serve to show more clearly the manner in which *c*, *g*, *j*, *q*, *x*, and *z* are used in Spanish.

ca —	is pro'ced ka.	cua or qua is pro'ced qua.
que	" ka.	cue or que " qua.
qui	" ke.	cui or qui " que.
co —	" ko.	cuo or quo " quo.
cu —	" koo.	
ga	" ga.	gua " gwa or wa.
gue	" ga.	güe " gwa or wa.
gui	" ghe	gui " gwe or we.
go	" go.	guo " gwo or wo.
gu	" goo.	
ja or xa	" ha.	za — " tha.
je, xe, or ge	" ha.	ze or ce " tha.
ji, xi, or gi	" he.	zi or ci " the.
jo or xo	" ho.	zo — " tho.
ju or xu	" hoo.	zu — " thoo.

Obs. 1. Spanish words or names ending in a consonant have the accent almost always on the last syllable: those ending in a vowel are generally accentuated on the penultima. If a word or name be an exception to either of these rules, in correctly printed Spanish works the accent is usually marked; as, *CÓRDOVA*, *ALCALÁ*, *JUCAR*, *CA' CERES*. It should be observed that the *s* in the plural does not

change the accent; hence, *casas*, "houses," though ending in a consonant, has the penultimate accent as well as *casa*, "a house."

Obs. 2. The Spanish language, as spoken in Mexico and South America, differs in some points materially from the true Spanish. Thus, *z* (and *c*, before *e* and *i*) instead of having the sound of *th*, are generally pronounced like *s*, and *b* and *v* are used interchangeably. Among the uneducated classes, *ll* is universally sounded like *y*; thus, *gallo* is pronounced almost *ga'yo*.

XIV.

SWEDISH.

1. The vowels *a*, *e*, *i*, *ä*, and *ö* are similar to the German.

2. *A* sounds like the English *o*. *LULEA* is pronounced *loo'-la-ä*; *TORNEA*, *tor'-na-ä*, &c.

3. *O*, at the end of a syllable, is like our *oo*; in other cases, like *o* in *not*.

4. *U* appears to blend the sounds of short *e* and of *oo*, being somewhat similar to *e'-oo*. The English *oo* is the sound nearest to it of any in our language.

5. *Y* is the same as in Danish; or, in other words, is similar to the French *u*.

6. The Swedish consonants are, for the most part, pronounced like the English, with the exception of *j*, and *g*, (before *e*, *i*, *ä*, *ö*, and *u*), which are equivalent to *y* consonant, and of *z*, which sounds like *ts*.

7. *Kj* sounds like the English *ch* in *child*; thus, *Kjöping* (written, also, simply *Köping*) is pronounced *chö'p-ing*.

XV.

WELSH.

The Welsh is the Cambrian branch of the old Celtic.

1. *A* is pronounced as in the English word *far*, and sometimes as in *fat*. When circumflexed, it has the same sound as in *fate*.

2. *E* sounds as in *met*; when circumflexed, as in *bear*, *fête*.

3. *I* sounds as in *fig* or *marine*.

4. *O*, with an acute accent, as *o* in *gone*; when circumflexed, as in *note*.

5. *U* has the sound of *i* in *pin*; circumflexed, as *ee* in *seen*.

6. *W* sounds like the English *oo*.

7. *Y*, in the penultima or antepenultima, has the sound of *u* in *fur* or *tub*; in the final syllable, or in a monosyllable, it sounds as in *pin*; when circumflexed, it is like *ee*. The English word *sundry* will serve to exemplify its sound both in the penultima and ultima.

8. The Welsh diphthongs may all be said to be proper. *Ai* sounds like long *i* in English; *aw*, like *ow*, as in *now*; *uw*, like *e-oo* or *u*, &c.

9. The consonants *b*, *d*, *h*, *k*, *l*, *m*, *n*, *p*, *r*, *s*, *t*, are the same as in English.

10. *C* is always hard, like *k*.

11. *F* (single) is like our *v*.

12. *G* is always hard, as in *get*.

13. *Ch* is similar to the German *ch*, or to the Greek *χ*.

14. *Dd* has the sound of *th* in *this*.

15. *Ff* is like the English *f*.

16. *Ll* is *l* aspirated, and has no equivalent in English. It bears a resemblance (though somewhat remote) to the sound of *thl*. "It is pronounced by fixing the tip of the tongue to the roof of the mouth, and breathing forcibly through the jaw-teeth on

both sides, but more on the right, as if written in English *llh*." This sound (except at the beginning of names) is usually anglicized by *lll*: e. g. *LLANELLY*, *lan-ell'lee*, *LLANGOLLEN*, *lan-goll'len*, &c.

17. *Ph* is the same as in English, or like *f*.

18. *Th*, in Welsh, is the same as in the English words *thin*, *mouth*, &c.

Oss. The accent, in all Welsh words, is either on the penultima or on the last syllable—never on the antepenultima.

XVI.

ORIENTAL NAMES.

The Royal Asiatic and Geographical Societies have adopted a mode of spelling Oriental names first suggested by Sir William Jones. The vowels and diphthongs in words written according to this system are to be pronounced as follows:

VOWELS.

- a* as in *bat* or *cat*; in India as *u* in *but* or *cut*.
- d* as in *father*, *rather*, *lath*; sometimes, in Western Africa, as *e* in *there*.
- e* as in *bet*, *let*.
- é* as in *there*, *where*; or *ai* in *fair*; *ay* in *day*; *ei* in *weigh*; *ey* in *they*.
- i* as in *bit*, *wit*.
- î* as in *ravine*, *fatigue*; *ie* in *mien*; *ee* in *seen*, *between*.
- o* as in the French words *mol*, *poltron*.
- ô* as in *bold*, *cold*; *store*, *sore*; *oa* in *roar*, *hoar*; *ou* in *soul*, *source*; *ow* in *bow*, *row*.
- u* as in *full*, *pull*, *bull*; *oo* in *wood*, *wooden*.
- û* as in *lunar*, *lurid*; *oo* as in *moon*, *spoon*; *ou* in *youth*, *your*.
- ai* as in *high*, *stile*; *y* in *dry*, *fly*; *ei* in *height*, *sleight*.
- ei* as in *their*, *eight*; *ey* in *they*, *prey*; *ai* in *pail*, *paint*; *ay* in *pray*, *say*; *a* in *ale*, *pale*.
- ou* as in *foul*, *count*; *ow* in *owl*, *fowl*.
- eu* as in *feudal*, *feud*; *ew*, in *few*, *mew*, *strew*.

CONSONANTS.

- b* as in *bad*.
- ch* as in *cheese*, *chair*.
- d* as in *dot*, *dole*.
- dh*, *z* as *th* in *thee*, *thou*, *that*; as *z* by Indians, Persians, and Turks.
- d*, *dh*, *z* ditto, ditto, preceded by *d*, or as double *d*; as *z* by Indians, Persians, and Turks.
- dh*, *z* ditto, ditto, ditto.
- f* as in *feel*.
- g* as in *good*, *girl*.
- gh* as in *rain*, *wrist*, as pronounced in Northumberland; often as a guttural *r* by the African Arabs.
- h* as in *hot*, *hill*.
- h* as in *hot*; or as *h* doubled.
- k* as in *kill*, *kite*.
- kh*, *ch* as in *loch*; or *gh* in *bragh*; i. e. the Welsh, Irish, Scotch, German, and Gr. *ch*; the Spanish *j*, &c.
- k* as in *kind*, but deep in the throat; and by the Moors and Egyptians, as *g* in *gold*.
- l* as in *lamb*, *lore*.
- m* as in *mad*, *man*.
- n* as in *not*, *near*; as *m* before *b* or *p*.
- n*, *g* as in *ring*, *sing*; only used in Turkish.
- p* as in *puree*, *peal*.
- r* as in *rain*, *red*.
- s* as in *sun*, *sweet*.
- sh* as in *short*, *shade*.
- s* as in double *ss*.
- t* as in *toad*, *tail*.

th, *s* as in *thick*, *thigh*; as *s* by Indians, Persians, and Turks; as *t* or *ts* by the common Arabs and Moors.

t as in *tt* doubled.

v as in *vast*, *very*.

w as in *waste*, *wet*.

y as in *you*, *yellow*.

z as in *zeal*, *zest*.

zh, *s* as in *pleasure*, *measure*; the French *j*.

a } a peculiarly deep guttural catch or stoppage
e } in the throat, which may be expressed by
i }
o } a short pause.
u }

No Arab word can begin with two consonants; thus they say *Ishander* for *Shander*, from Alexander.

No two vowels can follow each other immediately; thus *'afiyeh*, instead of *'afieh*.

The double consonant is expressed by a mark (") above the letter.

The *a* of the article *al* is cut off after a vowel, and its *l* takes the sound of *d*, *dh*, *d*, *dh*, *dh*, *r*, *s*, *sh*, *z*, *t*, *th*, *t*, *l*, *n*, *z*, when it immediately precedes those letters, thus: *'Abdu-r-rahmân*, *Shajidu-d-daulah*, *Khairu-d-din*, *Zaimu-n-nisâ*, *Mantiku-t-tair*, for *'Abdu-l-rahmân*, &c.

The *emphasis* or *stress* is laid on the long vowel by the Arabs, but on the last syllable by the Persians and Turks. In compound names and titles, such as *Kâyim-makâm*, *Yenicheri-Aghâ*, *Khazînâh-dâr-Odah-Bâshi*—the Turks lay the greatest stress on the last syllable of the first word, thus: *Odâh-Bâshi*, *Mahmûd-Aghâ*.

The final *b*, *d*, and *j*, are sounded *p*, *t*, and *ch*, by the Khazînâhdâr Turks.

DIGRAPHIC ALPHABET OF ORDINARY TYPES FOR APPROXIMATING TO THE SOUNDS OF ALL LANGUAGES.

Mr. Alexander J. Ellis, pending the introduction of a true phonetic character, has suggested the use of the following sets of letters, each expressing a distinct, recognised, and as nearly as possible invariable sound. "For scientifically accurate etymological and phonetical researches, for investigations of the changes which words have undergone in time or place," writes Mr. Ellis, "a very full alphabet is required. But for the general purposes of the traveller, the missionary, the historian, the ethnologist, the geographer, the newspaper correspondent, the grammarian, the educator, a much rougher instrument suffices, provided that means are furnished for refining it when required. For this purpose," Mr. Ellis continues, "the following alphabet has been constructed, entirely from letters of ordinary founts, so that it can be immediately used in any missionary station, newspaper establishment, or country printing-office. Most of the letters are employed in familiar significations, so that words thus written almost suggest their own proper sounds. The key words here affixed are chosen so as to show the different shades of meaning attached to each letter. The alphabet is termed *digraphic* from the Greek δις, double, and γραφή *ghrafi*, writing, because two or more letters are systematically employed to represent single sounds. The letters *a, k* are merely diacritical or distinctive, having no independent signification. The use of the diæresis (.) prevents all confusion. The long vowel sounds are represented by reduplication, but the construction of the alphabet is such that no confusion will arise if *ā ē ī ō ū* are employed to represent *aa, ee, ii, oo, uu* wherever they occur. The letters *ao, oe, ue* may also be represented by *q, ð, ù* and their long sounds *aoa, ooe, uee* by *qq, ðð, ùù* respectively. It should be remembered in employing this alphabet that any alteration in the use of the letters would entirely destroy the advantages arising from its systematic connection with a more complete form. Prof. Max Mueller of Oxford having published a 'Missionary Alphabet' on similar principles, it is added in a separate column.

(.)	over or under a letter (<i>shraibén, Lpndén</i>) or at the close of a syllable (<i>er'tiu</i>), or (:) at the close (<i>shraib'en, Lm'den, er'tiu</i>), marks the place of the accent, and should never be omitted. The form (:) will also serve as a diæresis, thus <i>sen'no</i> for <i>sen'no</i> or <i>sen'no</i> .

ARTICLE V.

OUTLINES OF GENERAL ETHNOLOGY.

The science of Ethnology—to which considerable attention has been paid in the compilation of the present Gazetteer—seeks to solve the often agitated question of the unity of the human race, or whether, as Scripture seems to inform us, the various races of mankind now existing on the globe, or whose existence in past ages is matter of authentic history, are “of one blood,” the descendants of one common parent; to trace the descent and affiliation of nations and tribes; and to note the operation of external and internal influences on the physical peculiarities and geographical distribution of the different families of mankind.

LINNEUS referred all the human family to five races: the AMERICAN, the EUROPEAN, the ASIATIC, the AFRICAN, and a fifth division embracing what he styled men of preternatural or abnormal formation.

BUFFON attempted a more philosophical arrangement of the race of mankind into the HYPERBOREAN or Lapland family, embracing the inhabitants of the Polar regions; the TARTAR family, embracing the Eastern and Central nations of Asia; the SOUTHERN-ASIATIC family, which comprises the South-Sea islanders; the EUROPEAN, the ETHIOPIAN, and the AMERICAN. He ultimately, however, reduced these six families to five, by classifying the Tartars and Laplanders together.

BLUMENBACH'S CLASSIFICATION.

BLUMENBACH recognised four great subdivisions or varieties of the human race, namely, the CAUCASIAN; the MONGOLIAN, in which he included both the Tartar and the Laplander of Buffon; the ETHIOPIAN; the MALAY, corresponding to the Southern-Asiatics of Buffon; and the AMERICAN, comprising the native races that once peopled the American continent. Of these, Blumenbach regarded the Caucasian or European to be the primary stock; and the other five to be offsets from this stock. No two persons are ever met with possessing precisely the same sort of features; yet there are certain generally characteristic countenances belonging to the different races of mankind, and even to particular nations. To enter into all the minute variations would be endless, but they have been reduced by Blumenbach to the five following, which include all the leading traits:

1. An oval countenance, with the features moderately inter-distinguished; high and broad forehead; nose aquiline, or slightly convex or prominent; cheek-bones not prominent; small mouth and lips slightly curved; chin full and well rounded. This face is most consonant with our ideas of beauty, and is characteristic in greater or less degrees of perfection of the *Caucasian* tribes.

2. Broad and flattish face; parts ill-distinguished from each other; space between the eyes flat and broad; flat nose; projecting cheeks; narrow and oblique eyelids, and chin rather prominent. This is the *Mongolian* face.

3. Broad, but not flat visage; prominent cheek bones; short-forehead; eyes deeply fixed; nose flattish, but prominent. Such is the *American* face.

4. Narrow face, projecting below; narrow, retreating, and arched forehead; prominent eyes; thick nose and lips, &c. *Negro* face.

5. Face not so narrow as the last, rather projecting downwards; bottled nose and large mouth. *Malay* countenance.

Placing these variations of the human countenance thus beside each other, the difference appears very striking; but we must repeat of the characters of countenance above described, as of those of colour, that they are by no means to be found the same in all the individuals of each respective race; on the contrary, individual deviations from the given type are numerous. Among the African and American nations, many persons are found with features as regular and as handsome as any Europeans. The same is more especially true of the South-sea islanders. Among ourselves how many have the characteristic features of other races! It may be observed, however, that rather less deviation from the characteristic model is observable in the Mongolian than in the other varieties. Though even there there is considerable difference, if not in form, at least in expression of features. As for example, between the Calmuck and the Chinese.

From the features we naturally proceed to the skull. This, in the Caucasian variety, is more fully developed in the upper and front parts, these forming a large and smooth convexity, a little flattened towards the temples. There is a general softness, harmony, and proportion in the entire contour of the head. Some differences in the formation of the skull have been observed in different nations of the Caucasian race; in the Turks, for instance, a singular globularity of this part has been remarked; and in the Poles and Russians a considerable contraction of the orbits. But we have not sufficient information on this subject to lead us to any definite conclusions.

In the Mongolian variety the head is of a square form, with the forehead low and slanting. The orbits are large and open, and the superciliary arches elevated.

In the Ethiopian variety the front of the head is laterally compressed and considerably elongated, so that the length of the whole skull from the teeth to the occiput is great. It forms a complete contrast to the globular head of some Europeans, and to the square head of the Calmucks. The forehead is wonderfully narrowed off, and the face widened below; the frontal bone is shorter, and it and the parietal less excavated than in the European. The temporal ridge is higher; the compression of the front of the skull arises from the strength of the temporal muscles; the foramen magnum is larger and farther back, and the apertures for the nerves are larger; the bony substance is hard, and the whole weight of the skull more considerable; the organs of sense are

more developed, and the narrow forehead and protruded muzzle give to the Negro head the appearance of a decidedly animal character.

Some of the South African tribes vary a little from the Negro conformation of skull. In the head of a Bushman, given by Blumenbach, the cranium is less compressed, the orbits and cheek-bones are wide, and the jaws not prominent. There are other differences, but we scarcely know sufficient of these tribes to class them under any given variety. The origin of the Hottentots, Caffres, Bushmen, and their subdivisions, found at the extremity of South Africa, is quite unknown. They exhibit characters strongly approximating to, and discrepancies equally deviating from, their Negro neighbours.

The American head is thus characterized; broad cheek-bones, depressed forehead, deep orbits, and the nasal cavity generally large.

The Esquimaux and Greenlanders, who seem to form a link between the Americans and Mongolians, have broad cheek-bones, large jaws and face, flattened nose, the cranium sufficiently ample, but distinguished by a posterior elongation.

The Carib tribes are conspicuous for a most remarkable depression of the forehead, which defect, like others of the Americans, they increase by artificial means. The hinder parts of the skull greatly preponderate; the face is large and muscular; the nasal bone neither small nor flat; the cavity is large, and the jaws and teeth exhibit manifestations of great strength.

The general characters in this respect attributed to the Malay variety are, a moderately-narrowed cranium slanting at the interior and upper part; face large, and jaws prominent. But, indeed, the numerous nations comprehended, with not much philosophical precision, under this variety, exhibit very various and opposing characters; some are not distinguishable in the formation of this part from Europeans, some partake of the Mongole, and many of the Negro type. In truth, the above division of skulls is somewhat arbitrary, and though sufficient for general purposes, is by no means universally applicable.

Camper was the first anatomist who distinguished and described in an accurate manner the differences of form which have been discovered on comparing the skulls of different races; he invented a technical method by which he imagined he could display in a single measurement the essential difference of skulls as to form and capacity, not only in reference to various nations of men, but likewise to the inferior species of animals; this method he thus describes:—The basis on which the distinction of nations is founded may be displayed by two straight lines, one of which is to be drawn through the meatus auditorius to the base of the nose, and the other touching the prominent centre of the forehead, and falling thence on the most advancing part of the upper jaw-bone, the head being viewed in profile. In the angle produced by these two lines the distinctions are found to exist in different nations and species of animals. The heads of birds display the smallest angle, and it always becomes of greater extent in proportion as the animal approaches more nearly the human figure. In one species of the ape tribe, the head has a facial angle of 42 degrees; in another of the same family, the facial angle contains 50 degrees; next to this is the head of an African Negro, which, as well as the Calmuck, forms an angle of 70 degrees; whilst in the heads of Europeans it contains 80 degrees. On this difference of 10 degrees in the facial angle the superior beauty of the European depends; while the high character of beauty, in some ancient works of

statuary, as in the head of Apollo and the Medusa of Sissocles, is given by an angle of 100 degrees.

CUVIER'S CLASSIFICATION.

CUVIER distinguishes only three races: the CAUCASIAN or WHITE; the MONGOLIAN or YELLOW; and the ETHIOPIAN or BLACK; but hesitates whether to refer the Malays, Papuans, and South-Sea islanders to any of these races. The American he classifies with the Mongolian. "Although," says that distinguished naturalist, "the human species would appear to be single, since the union of any of its members produces individuals capable of propagation, there are, nevertheless, certain hereditary peculiarities of conformation observable, which constitute what are termed *races*. Three of these in particular appear eminently distinct: the *Caucasian*, or white, the *Mongolian*, or yellow, and the *Ethiopian*, or negro.

"The Caucasian, to which we belong, is distinguished by the beauty of the oval which forms the head: and it is this one which has given rise to the most civilized nations,—to those which have generally held the rest in subjection: it varies in complexion and in the colour of the hair.

"The Mongolian is known by his projecting cheek-bones, flat visage, narrow and oblique eyebrows, scanty beard, and olive complexion. Great empires have been established by this race in China and Japan, and its conquests have sometimes extended to this side of the Great Desert; but its civilization has always remained stationary.

"The Negro race is confined to the southward of the Atlas chain of mountains: its colour is black, its hair crisped, the cranium compressed, and nose flattened. The projecting muzzle and thick lips evidently approximate it to the ape: the borders of which it is composed have always continued barbarous.

"The name *Caucasian* has been affixed to the race from which we descend, because tradition and the filiation of nations seem to refer its origin to that group of mountains situate between the Caspian and Black Seas, whence it has apparently extended by radiating all around. The nations of the Caucasus, or the Circassians and Georgians, are even now considered as the handsomest on earth. The principal ramifications of this race may be distinguished by the analogies of language. The Armenian or Syrian branch, spreading southward, produced the Assyrians, the Chaldeans, the hitherto untameable Arabs, who, after Mahomet, expected to become masters of the world; the Phœnicians, the Jews, the Abyssinians, which were Arabian colonies, and most probably the Egyptians. It is from this branch, always inclined to mysticism, that have sprung the most widely extended forms of religion. Science and literature have sometimes flourished among its nations, but always in a strange disguise and figurative style.

"The Indian, German, and Pelagic branch is much more extended, and was much earlier divided; notwithstanding which, the most numerous affinities have been recognized between its four principal languages—the Sanscrit, the present sacred language of the Hindoos, and the parent of the greater number of the dialects of Hindostan; the ancient language of the Pelagi, common parent of the Greek, Latin, many tongues that are extinct, and of all those of the south of Europe; the Gothic or Teutonic, from which are derived the languages of the north and north-west of Europe, such as the German, Dutch, English, Danish, Swedish, and their dialects; and finally, the Sclavonian, from which

are descended those of the north-east, the Russian, Polish, Bohemian, and that of the Vandals. It is by this great and venerable branch of the Caucasian stock, that philosophy, the arts and sciences, have been carried to their present state of advancement; and it has continued to be the depository of them for thirty centuries. It was preceded in Europe by the Celts, whose tribes, once very numerous, came by the north, and are now confined to its most western extremities; and by the Cantabrians, who passed from Africa into Spain, and have become confounded with the many nations whose posterity have intermingled in that peninsula. The ancient Persians originate from the same source as the Indians, and their descendants still present a very close resemblance to the nations of Europe.

"The Scythian and Tartar branch, extending first towards the north and north-east, and always wandering over the immense plains of those countries, returned but to devastate the happier abodes of their more civilized brethren. The Scythians, who, at so remote a period, made irruptions into Upper Asia; the Parthians, who there destroyed the Greek and Roman domination; the Turks, who there subverted that of the Arabs, and subjugated in Europe the unfortunate remnant of the Grecian people, were all offshoots from this branch. The Finlanders and Hungarians are tribes of the same division, which have strayed among the Solavonic and Teutonic nations. Their original country, to the north and eastward of the Caspian Sea, still contains inhabitants who have the same origin, and speak similar languages; but these are mingled with many other petty nations, variously descended, and of different languages. The Tartars remained unmixed longer than the others throughout that extent of country included between the mouth of the Danube to beyond the Irtisch, from which they so long menaced Russia, and where they have finally been subjugated by her. The Mongoles, however, have mingled their blood with that of the nations they conquered, many traces of which may still be found among the inhabitants of Lesser Tartary.

"It is to the east of this Tartar branch of the Caucasian race that the Mongolian race begins, whence it extends to the eastern ocean. Its branches, the Calmucks and Kalkas, still wandering shepherds, traverse the great desert. Thrice did their ancestors, under Attila, Genghis, and Tamerlane, spread far the terror of their name. The Chinese are the most anciently civilized branch, not only of this race, but of all known nations. A third branch, the Mandshurs, have recently conquered and still govern China. The Japanese, Coreans, and nearly all the hordes which extend to the north-east of Siberia, subject to Russia, are also to be considered, in a great measure, as originating from this race; and such also is deemed to be the fact with regard to the original inhabitants of various islands bordering on that archipelago. With the exception of some Chinese literati, the nations of the Mongolian race pertain generally to different sects of Buddhism, or the religion of Fo. The origin of this great race appears to have been in the Altai mountains, as that of ours in the Caucasus; but it is impossible to trace with the same certainty the filiation of its different branches. The history of these wandering nations is as fugitive as their establishments; and that of the Chinese, confined exclusively to their own empire, furnishes little that is satisfactory with respect to their neighbours. The affinities of their languages are also too little known to direct us in this labyrinth.

"The languages of the north of the peninsula beyond the Ganges, as well as that of Thibet, bear

some relation to the Chinese, at least in their monosyllabic structure; and the people who speak them are not without resemblance to the other Mongoles: but the south of this peninsula is inhabited by Malays, whose forms approach them much nearer to the Indians, and whose race and language are distributed over the coasts of all the islands of the Indian archipelago. The innumerable small islands of the southern ocean are also peopled by a handsome race, who appear to hold a near relation to the Indians, and whose language has much affinity with the Malay: but in the interior of the larger islands, particularly in the milder portions of them, there exists another race of men with black complexions, and Negro faces, all extremely barbarous, which are named Alfourous [see article ALFORAS]; and on the coasts of New Guinea and the neighbouring islands, are other Negroes nearly similar to those of the eastern coast of Africa, which are termed Papous; to the latter are generally referred the natives of Van Diemen's Land [now rapidly approaching to extermination,] and those of New Holland to the Alfourous.

"Neither the Malays nor the Papous are easily referable to either of the three great races; but can the former be clearly distinguished from their neighbours on both sides, the Caucasian Indians and the Mongolian Chinese? We avow that we cannot discern in them sufficient traits for that purpose. Are the Papous Negroes, which may formerly have strayed into the Indian Ocean? We possess neither figures nor descriptions precise enough to enable us to reply to this question.

"The inhabitants of the north of both continents, the Samoyedes, the Laplanders, and the Esquimaux, are derived, according to some, from the Mongolian race: but others regard them as mere degenerate offshoots from the Scythian and Tartar branches of the Caucasian race.

"The Americans have not yet been referred clearly to either of the races of the eastern continent; nevertheless, they have no precise or constant character, which can entitle them to be considered as a particular one. Their copper-coloured complexion is not sufficient: their general black hair and scanty beard would induce us to approximate them to the Mongoles, if their defined features, their nose as projecting as ours, their large and open eyes, did not oppose such a theory, and correspond with the features of the European. Their languages are as numberless as their tribes, and no demonstrative analogies have as yet been obtained, either with each other, or with those of the ancient world."

FISCHER'S CLASSIFICATION.

FISCHER, in his *Synopsis Mammalium*, indicates what he conceives to be seven species of *Homo* (reducing the number that had previously been assigned by Bory St. Vincent): and the numerous divisions and subdivisions of that naturalist being tolerably in accordance with the apparent value of the characters presented, whether or not they truly represent the real distinctions, or, in some instances, similarity be confounded with identity (a problem to which philology seems to offer the only key), the outline of his arrangement may be transferred to the present work, where it may chance to prove useful to some observers. His supposed species are as follow:—

1. *H. Japeticus*, Bory: corresponding to the Caucasian race of Cuvier.—This is distributed under three principal varieties, termed *Caucasicus*, *Arabicus*, and *Indicus*: of these the first is arranged into five

subvarieties, named *Concasicus (Orientalis)*, *Pelagius (Meridionalis)*, *Celticus (Occidentalis)*, *Germanicus (Borealis)*, and *Slavonicus (Intermedius)*, which severally comprehend the Caucasian, Pelagic, Celtic, Teutonic, and Slavonic (including the Sarmatic) nations; the second into two subvarieties, *Atlantici (Occidentalis)*, and *Adamicus (Orientalis)*, respectively containing the Phœnicians, ancient Numidians, and Guanches, or the Punic nations, and the Abyssinians, primitive Egyptians (modern Copts), Jews, Armenians, Arabians, &c., or the Coptic and Semitic nations.

2. *H. Neptunianus*, Bory.—Ranged under three subdivisions: the first unnamed (*Qu. Malayanus*?) allied to—probably much mingled with—the Indian variety of *H. Japeticus*, and consisting of the well-known Malays, which people the coasts only of the peninsula of Malacca, the islands of the Indian ocean, Madagascar, &c., never penetrating inland; the second, *Occidentalis*, comprising the New Zealanders, and natives of the Society, Friendly, Sandwich, and other islands scattered over the Pacific ocean,—it is suggested, also, (but with due and much required hesitation,) the ancient Mexicans and Peruvians: the third, *Papuanus*, composed of certain inhabitants of part of the north coast of New Guinea, the shores of the islands Waigou, Salwaty, Gammen, and a few others, is obviously a hybrid race, derived from the intermixture of the Malay and true Papou. Cuvier has remarked the affinity of language subsisting between the Malays and South Sea Islanders.

3. *H. Scythicus*, Bory.—The first division of this, unnamed (*Qu. Mongolensis*?) consists of the Calmucks and other Tartars; the second, *Sinicus (Homo sinicus of Bory)*, of the Chinese, Japanese, &c.; and the third and last, *Hyperboreus (Homo hyperboreus, Bory)*, of the Esquimaux. It corresponds to the Mongolian race of Cuvier.

4. *H. Americanus*, Bory.—“*Species*,” the author writes, “*adhuc male cognita, forsitan tota vel ex parte ad Scythicam reducenda*,” of which the latter only is in the least probable. “*Autochthones Americæ meridionalis, in stirpes innumeras distributi; e. g. Onagruæ, Guarani, Coroadi, Aures, Otomacui, Botucudi, Guaiacæ, Cherrucæ, &c.*” A second division is designated *Patagonus*, (being the *Homo Patagonus* of Bory,) composed of the large-statured Patagonians.

5. *H. Columbicus*, Bory.—The ordinary red Indian of America.

6. *H. Ethiopicus*, Bory.—Divided into the true Negro, not otherwise named; *Caffer, Homo Caffer*, Bory, inhabiting Caffraria, and part of the coast of Madagascar; *Melanoides (Homo melaninus, Bory)*, the Papous or indigenous inhabitants of Madagascar, the shores of New Guinea, the islands of New Britain, New Ireland, and many others, also of Van Diemen's Land; and *Hottentotus (Homo Hottentotus, Bory)*, the Bush and other Hottentots, which, it may be remarked, have not a few analogies with the nomadic Mongoles. The last appear to have been much reduced and enervated on, till a remnant only is left near the south coast of Africa, just as the Celts are now confined to the extreme west of Europe.

7. Lastly, *H. Polynesianus*, Fischer (*H. australarius, Bory*).—The Alfourous, the lowest in the scale of human beings: comprising the inland inhabitants of the Malay peninsula, the islands of the Indian Ocean, Madagascar, New Guinea, New Holland, &c. Such is the arrangement of an able and accomplished naturalist, published in 1829.

PRICHARD'S CLASSIFICATION.

PRICHARD, in his elaborate ‘*Researches into the Physical History of Mankind*,’ contends strenuously and successfully for unity of species in the genus *Homo*. The following are the leading varieties of Man according to Dr. Prichard.

“On comparing the principal varieties of form and structure which distinguish the inhabitants of different countries, we find that there are seven classes of nations which may be separated from each other by strongly marked lines. Among their principal characteristics are peculiar forms of the skull, but these are by no means the only difference which require notice and particular description. These seven principal classes are, first, those nations which in the form of their skulls and other physical characters resemble EUROPEANS, including many nations in Asia and some in Africa; secondly, races nearly similar in figure, and in the shape of the head, to the Kalmucks, Mongoles, and Chinese. These two first classes of nations will be designated, for reasons to be explained, IRANIAN and TURANIAN nations, in preference to Caucasian and Mongolian. The third class are the native AMERICAN nations, excluding the Esquimaux and some tribes which resemble them more than the majority of inhabitants of the New World. The fourth class comprises only the HOTTENTOT and Bushman race. A fifth class are the NEGROES; the sixth, the PAPUAS, or woody-haired nations of Polynesia; the seventh, the AI-FOUROU and Australian races. The nations comprised under these departments of mankind differ so strikingly from each other, that it would be improper to include any two of them in one section, and there is no other division of the human family that is by physical traits so strongly characterized. There are, indeed, some nations that cannot be considered as falling entirely within either of these divisions, but they may be looked upon as approximating to one or another of them.” Dr. Prichard affirms, of the Caucasian race of Cuvier, that, “there is no truth in the assertion that the traditions of all these nations deduce their origin from Caucasus,” and states, of his Indo-Atlantic, or Iranian nations, that “complexion does not enter among the characters of this type, since it is of all shades, from the white and florid colour of the northern Europeans, to the jet-black of many tribes in Lybia, and southward of Mount Atlas.”

LATHAM'S CLASSIFICATION.

Dr. Latham only admits three great primary divisions of the human race: 1st, the JAPETIDÆ, corresponding nearly with the Iranian race of Prichard; 2d, the MONGOLIDÆ, identical with Cuvier's group, and embracing the Malay, the American, and the Australian; and 3d, the ATLANTIDÆ or African race, embracing the Semitic nations.

PICKERING'S CLASSIFICATION.

In the 7th vol. of the magnificent report of the United States Exploring Expedition, published by the government of that country, Dr. Pickering has sketched, from personal observation chiefly, eleven races of men, under which he classifies all known varieties of the human family. An outline of his valuable observations will, it is thought, form a valuable addition to our Appendix; and serve to reunite various scattered ethnographical notices throughout the body of our Gazetteer.

Dr. Pritchard commences his enumeration of races by remarking that three races of men are familiarly

known, and are admitted by general consent. "The same three physical races have been considered by eminent naturalists (who, however, have not travelled) to comprise all the varieties of the human family. Blumenbach has indicated a fourth race, the Malay; and even a fifth has been shadowed forth in the accounts of the Australian seas. It was impossible, however, from the materials furnished by books, to define the geographical boundaries of these races; a point which seemed of importance, as forming in a good degree the basis of our reasoning on the whole subject.

"This then was one of the objects of investigation I proposed to myself on joining the Exploring Expedition. At one time during the voyage, I thought my task nearly accomplished; and, after visiting Australia and New Zealand, I actually penned an opinion, that the races of men were five in number. Soon, however, I was compelled to admit three more: neither was this the limit of the productiveness of nature, in new and undreamt of combinations of feature. More careful observation than at the outset had seemed necessary was now called into requisition; and often, for a time, I experienced perplexity. One difficulty arose, in fixing in the mind, while passing from place to place, the relative shades of complexion. Fortunately for my purpose, tattooing was practised in many of the countries visited, and these markings afforded a convenient test of the depth of hue. Individuals, also, of three or more races being present among the crews of our vessels, afforded the means of making some direct comparisons. In the end all difficulties vanished, and I was enabled to arrive at satisfactory conclusions. It should be observed, that in the countries visited by the expedition, the inhabitants present among themselves great uniformity of feature and complexion: while in the Arab countries and in Western Hindostan, there is an astonishing diversity of aspect in the population; independently, to all appearance, of the great mixture of races. The mountain-region of Abyssinia is said likewise to present a seemingly heterogeneous population; but in all the countries which I have myself visited, the varieties of feature have appeared susceptible of reduction to the arrangement adopted in the present work.

"I have seen in all ELEVEN RACES OF MEN; and though I am hardly prepared to fix a positive limit to their number, I confess, after having visited so many different parts of the globe, that I am at a loss where to look for others. They may be enumerated conveniently enough in the order of complexion; and beginning with the lightest, I will add some of the more obvious distinctive characters.

a. White.

1. ARABIAN. The nose prominent, the lips thin, the beard abundant, and the hair straight or flowing.

2. ARABIAN. The complexion hardly becoming florid; the nose prominent, and the hair crisped.

Brown.

3. MONGOLIAN. Beardless, with the hair perfectly straight and very long.

4. HOTTENTOT. Negro features, and close woolly hair; and the stature diminutive.

5. MALAY. Features not prominent in the profile; the complexion darker than in the preceding races, and the hair straight or flowing.

c. Blackish-brown.

6. PAPUAN. Features not prominent in the profile; the beard abundant, the skin harsh to the touch, and the hair crisped or frizzled.

7. NEGRILLO. Apparently beardless; the stature diminutive, the features approaching those of the Negro, and the hair woolly.

8. INDIAN OF TELINGAN. The features approaching those of the Arabian; and the hair, in like manner, straight or flowing.

9. ETHIOPIAN. The complexion and features intermediate between those of the Telingan and Negro; and the hair crisped.

d. Black.

10. AUSTRALIAN. Negro features, but combined with straight or flowing hair.

11. NEGRO. Close woolly hair; the nose much flattened, and the lips very thick.

"In an absolute sense, the terms *white* and *black* are both inapplicable to any shade of the human complexion; but they are sanctioned by general usage, and there may be some convenience in retaining the above four general divisions. Two of the races may therefore be designated as *white*, three as *brown*, four as *blackish-brown*, and two as *black*. Five of the races have the hair straight or flowing; while in the others it is more or less crisped, and in two of them it may with propriety be termed wool.

"Other modes of associating the races may also be mentioned. Maritime habits, and the part they appear to have taken in colonizing the globe, would lead us to separate the Malay, Negrillo, and Papuan, or the three island from the eight continental races.

"Again, looking to their distribution over the surface of the globe, six of the races may be regarded as Asiatic or East Indian, and four as African; the eleventh (the *white* race) being in common, or holding geographically an intermediate position.

"The existence of races, it should be observed, is a phenomenon independent of climate. All the physical races that occur in cold regions can be traced by continuity to the tropics, where moreover we find other races in addition. By the same evidence of geographical continuity, the population of one hemisphere can be satisfactorily derived from the other; but a difficulty arises in narrowing the circle. On the one hand, it seems quite impossible to trace the four African races to any part of Asia; and, on the other, it will be equally difficult to connect the Mongolian race with the African continent."

Colour of the skin in different races of men.—The colouring matter is understood to reside in a membranous network of greater or less density extending over the surface of the body, called the *rete mucosum*. This is situated between the chorion or true skin and the cuticle. The *rete mucosum*, or, as it is sometimes called, the cutaneous reticle, consists of a fine texture of vessels, containing fluids of different shades in the black and tawny races. It seems, however, doubtful whether any such membrane for the deposition of colouring fluid exists in white men, though the varieties of fair and dark which we observe among them would seem to require some organization of this kind; nor does this theory sufficiently illustrate the occasional instances of pied or spotted men. The human skin exhibits various shades of white, yellow, red, brown, and black. There is every possible intermediate shade between the fairest white and the deepest black, but no one gradation of colour is found in all the individuals of any nation. Generally speaking, how-

ever, we may refer all the national varieties of colour to the five following classes:—

(1.) *White*, accompanied with redness of cheeks. This characterizes all the Europeans except the Laplanders, the Western Asiatics, and the Northern Africans. Considerable variety will be found to exist in the colour generally called white. The Albino possesses a skin of a reddish or a dead white colour, with yellowish white or milk-white hair, and red or very light coloured eyes. The hair over the whole body is unusually soft and white, not of the hoary colour of age, nor the light yellow or flaxen tint of the fair-haired races. It is rather that sort of colour peculiar to a white horse. These peculiarities evidently arise from a deficiency in the colouring principle, which is much the same in the skin, hair, and eyes. The latter organs are in the Albinos peculiarly sensible to the stimulus of light, in consequence of the want of a black pigment, the office of which is to absorb its superfluous portions. Hence we find the eyelids of these people generally closed, and the eyes usually exhibiting some appearances of morbid phenomena. But in twilight, dusk, or even a close approach to darkness, they see remarkably well. This peculiarity exists from birth, never changes, and may be propagated by generation. Some would refer the Albino variety to disease, but this notion appears incorrect, inasmuch as most of the individuals thus characterized are observed to be perfectly strong and healthy. This variety was first observed in the Africans, but it is far from being peculiar to that race. It has, however, never occurred except in detached instances, for though it is observed to be more prevalent in some parts of the world than others, the notion of entire Albino tribes has been exploded. There is another race of men, with a remarkably fair complexion, yellow, flaxen, or red hair, and blue or gray eyes. In these persons the cutaneous capillaries are easily filled, and consequently they exhibit a general sanguineous tint, deeper and more florid in the face. The ancient and modern Germans belong to this variety, and generally the Danes, Dutch, Swedes, English, &c. Lastly, a race very extensive is found with skin of a brownish white, and dark brown or black hair. The Southern Europeans and Western Asiatics are of this character.

(2.) The second grand variety in human colour is *yellow or olive*. This characterizes all the Mongolian tribes, and, generally speaking, most of the natives of Upper Asia.

(3.) Is the *red or copper* colour, which in various shades is prevalent over the entire American continent, and chiefly confined to it.

(4.) *Brown or tawny*. This in lighter or darker variations belongs to the inhabitants of the peninsula of Malacca, and is extended through most of the islands of the Pacific ocean.

(5.) *Black*, in an amazing variety of shades, characterizes all the African continent, the northern and southern parts excepted, New Holland, Van Diemen's Land, New Guinea, New Hebrides, and some other islands of the South sea. It is mingled with the ordinary colour of the natives in Brazil, California, and India.

It is not to be supposed that these different colours, thus generally described, prevail each of them uniformly in all the individuals of the race; on the contrary, there are considerable gradations, and even tribes have been found among the Americans, and individuals are constantly produced in each respective race, with characteristics approaching to those of some other. Children born from an intermixture of different races hold generally a middle

station between the two. Thus the *Mulatto* forms a medium between the African and European. The colour will be more or less dark according to the complexion of the European father and mother. The cheeks are not ruddy, and the hair is black and curled, but less short than the Negroes. The iris is always dark.

From the Europeans and Mulattoes proceed what are called *Tercerons*. These generally resemble Europeans. The hair has nothing of the woolly curl, the skin has a slight brown tint, and the cheeks are red. The offspring of these last and the Europeans are not to be distinguished from our own race. An opposite course will reduce the Mulatto offspring to the characters of the Negro, and by intermixture with the latter, the fourth generation will be perfectly black. From the native Indians and the Europeans are born *Mestizos*. They are much lighter than the Mulattoes, and often not distinguishable in colour from Europeans. The small beard, hands, and feet, and the obliquity of the eyes, mark their Indian blood. The offspring from them and European fathers are in all respects like the Europeans. From Negroes and Americans spring *Zambos*, resembling Mulattoes, but darker. Among the dark races are sometimes found persons spotted with white.

Under this head of colour, we may briefly notice the varieties in the hair, beard, and iris.

The structure and properties of the hair are closely allied to those of the skin, and it derives the means of its growth, and probably its colouring matter, from the cutaneous vessels. Each hair may be traced through the cuticle and surface of the cutis to a bulb partly in the chorion, and partly in the cellular membrane. This bulb consists of a thick outer covering, in which the root of the hair and a vascular pulp by which the root is secreted, are contained. There is a close analogy between the skin and hair. The latter, in the Albino, as before observed, is short and white. A light complexion and thin skin, are usually accompanied with fair or red hair, and darker hair usually belongs to a dark colour and thick skin. In the coloured varieties of the human race, the hair is black and always coarser than that of Europeans. In the spotted Negroes the hair growing out of a white patch on the head, is white, a presumptive proof that the colouring matter of the skin and hair is the same. The principal differences in the hair are four. 1. Brownish, deviating into yellow or red, or into black. It is copious, long, and soft, and characterizes the natives of the temperate climates of Europe, and somewhat stronger and darker, and belongs to the Eastern Asiatics and Northern Africans, and the Celtic and Slavonic races in Europe. 2. Black, strong, straight, and thin. This character of hair belongs to the American and Mongolian varieties. 3. A softer black, thick, and curled, is found among the South-sea islanders. 4. Black and crisp, in all the Negro tribes. It may be proper to notice here that the hair of the African has been ascertained to bear no resemblance to wool except in appearance, and that it has all the characters of true hair.

The above divisions hold good generally, but we find, as in colour, so in hair, many individual exceptions in the different races. As great differences are observable in the various races in point of beard, as of hair generally. Most individuals of the dark races are remarkably deficient in this particular. The Mongolians have much less beard than the Europeans, and it grows later. The Calmucks have small and poor mustachios, and very little hair on the body. The Buriats are nearly beardless, so are the Tunguses and other hordes of Eastern Si-

beria. The Chinese resemble the Mongolian tribes in this particular; but contrary to their practice the latter encourage the growth of the beard. The custom of exterminating the beard and hair on the body is common among many of the dark nations; but this would not have been attempted, and could not be executed, if nature had furnished them in this article so plentifully as she has done the Europeans.

There has been much controversy whether the native Americans have beards or not; it is now completely ascertained that they have beards, but weak and imperfect, and that the practice of exterminating them is general. The genuine Negroes have very little beard or growth of hair over the body. But the South-sea islanders are by no means deficient in these excrescences.

An analogy similar to that between the hair and skin exists between the latter and the iris of the eye. New-born children in Europe have generally light eyes and hair, and both gradually darken in those of dark complexion. In old persons, as the hair turns gray, the eye loses a portion of its colour. In the Albino there is an entire deficiency of proper colouring matter, so that the iris has a reddish hue from the colour of the blood in the capillaries. The same sympathetic variations in the skin, hair, and eyes are also observable in other animals. The principal colours of the human eye are blue, passing to grayish in the lighter tints, a sort of obscure orange, a kind of middle tint between blue and orange, sometimes very green in red-haired persons; and lastly, brown, verging to hazel on the one side, and black on the other. To these the reddish eye of the Albino may be added. These varieties occur constantly in individuals of the same race and family. Sometimes they are confined to particular tribes of the same nation. The Gothlanders of Sweden are described with light hair and grayish eyes. The Findlanders with yellow hair and brown eyes, and the Laplanders with both black. Blue eyes with yellow hair have always marked the Germanic tribes. Blue eyes with black or dark hair form a combination not uncommon among the tribes of Kurdistan, and others of the Caucasian race, who inhabit elevated situations in Asia. The iris is dark in all the coloured varieties, but in the Negro it is so black as to be distinguished with difficulty from the pupil.

I.—THE MONGOLIAN RACE.

"I have thought," says Dr. Pickering, the substance of whose work we now proceed to condense, "I have thought to distinguish in the Mongolian race physical traits and a style of feature, at variance in some respects with those of the remaining series of races. One of these peculiarities consists in the occurrence of a feminine aspect in both sexes. In the absence of any striking difference in stature or dress, I have often seen the stranger at a loss to distinguish men from women; a difficulty not depending altogether on the absence of a beard, and which, so far as my observation extends, does not take place in the other races. The well-characterised Mongolian head is less compressed at the sides than is the head in the other races, so that when viewed in front, it presents a more rounded contour. The forehead recedes, but in continuation of a general curve from the chin upwards; and it frequently happens that the nose is likewise arched. The latter withal is less prominent than in the White race, and the lips are somewhat thicker. The complexion is always sufficiently light to show a flush, and in the far north, it sometimes becomes decidedly florid. This is said to be the case with

the coast-tribes of North-west America; and indeed I have seen among them two females, in all probability of unmixed race, who, from their fair complexion, might very well have passed for Europeans. The Mongolian is pre-eminently a beardless race: the chin often remaining perfectly smooth, even to extreme age. In the instances where a thin beard does make its appearance, I have never seen it attain a greater length than two or three inches, and it was always perfectly straight. The hair also has appeared to me more uniformly straight, and to have a tendency to grow longer than in the other races; when left to itself, I think it will not infrequently reach the ground. As to the 'oblique eye,' so generally spoken of as characteristic of the Chinese, I have found it among them in some instances, and also among the Chinooks of North-west America; but I have not been able to make much use of it as a distinctive character. I have moreover seen individuals of the Malay race having their eyes small, and as if half-closed, and I am induced to think some confusion may have arisen from this source. I was not more successful with the alleged 'absence of a projecting inner angle to the lids,' which has likewise been spoken of as a Chinese peculiarity. Some writers have found a want of clearness in the *sclerotic*, or 'white of the eye,' of the aboriginal American, a point I have not examined, but which seems to deserve attention.

"The Arctic regions seem exclusively possessed by the Mongolian race, which besides is diffused through a greater variety of climates than any other, and over a far larger area. This comprises about one-half of Asia, and, with a slight exception, all aboriginal America, or more than two-fifths of the land-surface of the globe. Notwithstanding the recent encroachments, the greater portion of the American continent is still inhabited by Mongolian tribes; and while some of them wander towards the North, further than civilized man has hitherto been able to follow, others are still the nearest dwellers to the Southern pole."—See the ethnographical section in article *MONGOLIA*.

The American Race.—The American aborigines are generally distinguished by long, straight, black hair, thin beards, prominent cheek-bones, a copper or brown-red colour, varying to lighter or darker shades, thick lips, black eyes, often obliquely placed as in other Mongolian races, and noses either flat or aquiline. "In referring to such exceptions as exist to this description," says Mr. Bradford, in his 'American Antiquities,' "we should not forget that tribal distinctions are everywhere maintained with great tenacity, and, of consequence, that to such occasional aberrations from the common standard as have originated among any particular family, a great opportunity for perpetuation has been afforded. The uniformity of the American physical appearance has, however, struck most travellers and naturalists with great force. The testimony of a few may be cited, though authorities might easily be accumulated. 'The Indians of New Spain,' says Humboldt, 'bear a general resemblance to those who inhabit Canada, Florida, Peru, and Brazil. They have the same swarthy and copper colour, flat and smooth hair, small beard, squat body, long eye, with the corner directed upwards towards the temples, prominent cheek-bones, thick lips, and an expression of gentleness in the mouth strongly contrasted with a gloomy and severe look.' 'Over a million and a half of square leagues, from the Terra del Fuego islands to the river St. Lawrence and Behring's straits, we are struck at the first glance with the general resemblance in the features of the inhabitants.' 'The Indians,' says Ulloa, 'are of a

copper colour, which by the action of the sun and air grows darker. I must remark that neither heat nor cold produces any sensible change of colour, so that the Indians of the Cordilleras of Peru are easily confounded with those of the hottest plains; and those who live under the line cannot be distinguished by the colour from those who inhabit the fortieth degrees of north and south latitude.' 'I had no sooner beheld these Americans,' observes the enterprising Ladyard of the natives of Nootka, 'than I set them down for the same kind of people that inhabit the opposite side of the continent. They are rather above the middle stature, copper-coloured, and of an athletic make; they have long black hair.' 'I have been forcibly struck,' says Mr. Flint, 'with the general resemblance in the countenance, make, conformation, manners, and habits of the Indians. A savage of Canada and the Rio-del-Norte are substantially alike; they are all, in my mind, unquestionably from a common stock.' One testimony, still more explicit, if possible, may be added. Ulloa, upon his return from South America, touched at Louisburg, at which place he remarks, 'In this and the adjacent islands were a considerable number of inhabitants, born in the country, or on the main land; and, what is remarkable, these Indians not only resemble those of Peru in complexion and aspect, but there is also a considerable affinity between their manners and customs; the only visible difference is in stature, and in this the advantage lies visibly on the side of the inhabitants of these northern climates.'

"That this uniformity is universal, and applies to all the tribes, cannot be maintained, and it would be absurd to suppose that it existed. But yet no varieties have been observed which approach the Indians anywhere near the white and black races, and where an exception occurs in one particular, the other peculiarities are still retained. It is true, many statements have been made concerning the existence of white and black Indians, but, upon examination, they are found to have proceeded usually from the early travellers, who were often vague and exaggerated in their use of terms, or to have been founded upon misnomers, or to have related to tribes who had intermarried with Europeans. An instance of the erroneous conclusions which may be drawn from a misnomer is afforded in a tribe of the Caucasus, who, though called 'the Black Circassians, are of a very fair complexion.' Thus, in America, the tribes of the upper Orinoco, who have been styled 'White Indians,' according to Humboldt, who had an opportunity for personal examination, differ from other Indians only by a much less tawny skin, having, at the same time, the features, the stature, and the smooth, straight black hair of their race. The Arkansas in North America, of whom the same assertion has been made, though not of a copper colour, are dark and tawny, and possess all the Indian peculiarities of form and feature. An idea may be gathered of the inaccurate notions formerly prevailing upon this subject, by the assertion of Charlevoix, that several tribes, and among them some of the Esquimaux, have white hair; indeed he adds of the latter nation that they have a beard 'so thick up to their eyes that it is difficult to distinguish any features of their face,' that 'they are tall and pretty well shaped,' and that 'their skin is white as snow.' Frezier also says, that the Fuegians are almost as white as Europeans, a statement abundantly disproved by subsequent observations. For the purpose of showing how restricted these apparent exceptions are, and in order to indicate the general predominance of those characteristics which mark the race, it may be well to attempt a brief physical

synopsis of the tribes, confirmed by the testimony of various travellers.

"The Esquimaux have generally been distinguished from the American race, in consequence of their colour, diminutive stature, and other peculiarities, but it is apprehended, that in producing these signs of difference, so far as they really exist, natural causes, such as food, mode of life and climate, have chiefly operated. The strongest evidence, however, of their affiliation to the other Indian tribes is afforded in the physical appearance of the Fuegians, who occupy a region where similar causes have existed and produced the same results. 'The general form of the Fuegians is peculiar, the head and body being particularly large, and the extremities unusually small; but the feet are broad though short. This peculiarity, no doubt, is owing to their mode of life, &c. From the same cause, want of exercise, this is the form of the Esquimaux and the Laplanders.' The Fuegians have generally straight, long, and jet black hair, scanty beard, a broad face, black, angular Chinese eyes, copper complexion and small stature. In the work just cited, there are several interesting descriptions of particular individuals of this tribe, as follows: 'The complexion of this man was dark, his skin of a copper colour, the native hue of the Fuegian tribes, the eyes and hair black,—this is universal, as far as I have seen, and predominant throughout all the aborigines of America, from the Fuegians to the Esquimaux.' And again, 'the features of this individual were rounder than they generally are among those of his nation, the form of whose countenance resembles that of the Laplanders and Esquimaux. They have broad faces with projecting cheek bones; the eyes of an oval form, and drawn towards the temples.' The stature of the Fuegians is generally from four feet ten inches to five feet six inches, and their figures are similar to those of the Esquimaux."—See article FUEBO (TIERRA-DEL).

"The Patagonians afford a striking instance of the exaggerated and gross inaccuracies which pervade many of the accounts of the Indian tribes. Indeed it is but recently that the fanciful stories which had been propagated concerning the stature of these natives have been disproved; and a careful examination of all the authorities, together with the observation of recent voyagers, has satisfactorily shown that their height has been greatly over-estimated. The medium stature of this race appears to be from five feet ten inches to six feet. Falkner, however, bore impartial and correct testimony. 'The Patagonians, or Puelches,' he says, 'are a large-bodied people, but I never heard of that gigantic race which others have mentioned, though I have seen persons of all the different tribes of southern Indians.' The colour of the Patagonians is a rich, reddish brown, rather darker than copper, the head is long, broad, and flat, the forehead low, the face of a square form, the eyes small and often obliquely placed, the nose rather flat, but sometimes aquiline, the hair long, lank, and black, and the beard thin. Proceeding to the north, the nomads Pehuenches and the Araucanians, according to Mr. Poeppig, 'belong to the same branch of the great copper-coloured, or Patagonian race.' The Araucanians are of a reddish brown or copper colour, are finely shaped and muscular, and have small black eyes, a broad face, flattish nose, coarse black hair, and no beard. One tribe it has been thought offers an exception to this description,—the Boronoes, or Borea Indians living near Valdivia, in Chile. Some of them are said to have light eyes, a fair complexion and red hair. Frezier disposes of this objection, for he says, in speaking of those who are thus dis-

tinguished, 'these are descended from the women taken in the Spanish towns they destroyed; his statement is fully confirmed also by Ulloa, who traces this diversity to the same cause.'—See articles *ARAUCAHIANS*, and *PATAGONIA*.

"The present Peruvian Indians, who are of the same race as the ancient inhabitants, are described as of a copper colour, with high cheek bones, small black eyes set widely apart, hair coarse and black, without any inclination to curl, beard scanty, nose somewhat flattened, small stature, and the feet small: these characters are of general prevalence among all the natives. The Bolivian Indians, according to Dr. Ruschenberger, are dark copper-coloured, the nose is flattened, and the eyes are obliquely placed."—See article *PERU*.

"In general, the same physical description will apply to the numerous hordes of Brazil. The Mongul physiognomy is more striking in these tribes than in those of any other part of America. Prince Maximilian describes one of these Indians as 'distinguished from all the rest by his Calmuck physiognomy;' but the same characters are of almost universal prevalence. Passing further to the north, but little variation from this type can be found in the tribes inhabiting Guiana and Colombia. Humboldt has termed the complexion of the Chaymas and other natives of this region, a dull brown or brown-red, inclining to a tawny colour, and he adds, that they resemble the Monguls, by the form of the eye, their high cheek bones, their straight hair, and the almost entire absence of beard.

"The natives of the West India Islands at the discovery consisted of two classes, differing slightly in appearance, and more considerably in manners and character. The Charibs, who occupied the small islands of the southern part of this group, were of a fierce, cruel, and indomitable disposition. The Arrowauks, who resided in the larger and northernmost islands, were of a milder character, and appear to have possessed more of the arts of civilisation. The Charibs were of a tawny or dark-brown complexion, middling stature, robust, and muscular, with small black eyes, long straight black hair, scanty beard, and flat retreating foreheads. The Arrowauks were taller than the former race, and of a reddish brown colour, their foreheads were flat, though not so retreating as those of the Charibs, the hair was straight, black, and lank, the beard scanty, the eyes black, cheek bones prominent, the face broad, and the nose flat."—See article *CARIBBEES*.

"The Mexican Indians have generally 'a swarthy and copper colour, flat and smooth hair, small beard and squat body, long eye, with the corner directed upwards towards the temples, prominent cheek bones, and thick lips.' Clavigero says, that the moral and physical qualities of the Mexicans proper, were the same as those of the adjacent nations, so that the description of the one is equally applicable to the rest; he considers the colour of the skin, however, as olive. According to Humboldt, the Aztec and Otomite tribes have more beard than the others, and many of them wear small mustaches."—See ethnographical section of article *MEXICO*.

"The aboriginal inhabitants of Upper California, when first observed by the early Spanish travellers, were of the same stock as those living in the adjoining peninsula. Though the different tribes varied in some unimportant particulars, they bore a general resemblance to each other;—and though some are described as of a diminutive size, they were usually of ordinary stature. They were of a darker colour than the natives of the more southern provinces, their lips were large and projecting, noses

broad and flat, foreheads low, beard scanty, and hair straight and black;—long beards, it is said, have occasionally been observed. This was one of the localities where American negroes have been placed, an idea which the following passage from Venegas may possibly dispose of. 'It is known,' he says, 'that some ships have left Mulattoes and Mestizoes at Cape San Lucas.' 'Father Juan de Torquemada tells us that the Californians showed no manner of surprise at the sight of negroes, there being some of that caste among them, the race of those who had been left by a ship from the Philippine islands.' The nations near the mouth of the Columbia river generally resemble each other in their physical appearance. Their stature is diminutive, 'the complexion is the usual copper-coloured brown of the North American tribes, though rather lighter than that of the Indians of the Missouri;' the mouth is wide and the lips are thick; the nose is wide at the extremity, and low between the eyes; the eyes are generally black, the face broad, forehead flat, and the hair straight and black. The form of the forehead arises from artificial compression of the cranium, which is carried to such an extent, that the forehead often runs in a straight line from the nose to the crown of the head. Further to the North and along the Pacific, tribes have been observed, which are said to be distinguished by a lighter complexion. The Cheyennes and other tribes on the shores of the south-western tributaries of the Missouri, though differing somewhat in features and size, 'still, in the direction of the eye, the prominence of the cheek bones, the form of the lips, chin, and retreating forehead, are precisely similar' to the Missouri Indians."—See articles *CALIFORNIA* and *OREGON*.

"The Osages are a fine race of men, tall, well made, of a tawny red colour, with aquiline features, prominent cheek bones, and straight black hair. 'They do not seem to differ in point of features and colour from the Missouri Indians; their stature is by no means inferior to the latter.' Mr. Brackenridge also remarks of this tribe, that 'they have been noted for their uncommon stature. This is somewhat exaggerated, though they are undoubtedly above the ordinary size of men. The wandering, or semi-wandering nations of Louisiana may be characterized as exceeding the whites in stature.' The Arkansas are dark, but not copper-coloured, they possess fine aquiline features, scanty beards, long black hair and elongated angular eyes. The same general characteristics as those already indicated, with the exception of a greater prominence of the cheek bones, mark the Sioux, Pawnees, and other tribes inhabiting the region west of the Mississippi. The Mandans, however, appear to have a lighter colour, and though possessing the Indian form in other respects, their hair in some instances is of a light chestnut colour and the eyes are of a bluish cast. But connected as they are by affinities in language to other tribes, whose Indian physiognomy cannot be doubted, it is possible that these peculiarities have been produced by an intermixture of the race.

"We see nothing," says Charlevoix, 'in the outward appearance of the Natchez, that distinguishes them from the other savages of Canada and Louisiana;' the same appears to have been the case with all the southern Indians, and a description of one tribe will therefore answer for the rest. 'The Chickasaws,' says Mr. Adair, 'are a comely, pleasant looking people. Their faces are tolerably round, contrary to the visage of the Choctaws, which inclines much to flatness, as is the case of most of the other Indian Americans. The lips of the Indians

in general are thin, their eyes are small, sharp and black, and their hair is lank, coarse and darkish; they pluck their beards.'

"The similarity in the physical appearance of the numerous tribes of the Algonquin-Lenape race and of the Iroquois was equally striking. Smith describes the Powhatans as generally tall and of good proportions, with a brown colour, black hair, and little beard. Loskiel says that 'the Delawares and Iroquois, and other nations in league with them, resemble each other much, both as to their bodily and mental qualifications. Their skin is of a reddish brown, nearly resembling copper, but in different shades. Some are of a brown yellow, not much differing from the mulattoes; some light brown, hardly to be known from a brown European, except by their hair and eyes. The former is jet black, stiff, lank, and coarse, and almost like horse hair.' Smith describes the Iroquois as tall, beardless, of a tawny complexion, and having black uncured hair; and Charlevoix, as of a lofty stature, with black hair and a scanty beard. 'The colour of the savages,' he says, 'does not prove a third species between the white and black, as some people have imagined. They are very swarthy and of a dirty dark red.' The Knisteneaux, a branch of the Algonquin race, who had penetrated the farthest towards the north-east, and inhabited the territory from the Atlantic to the shores of Hudson's bay, the St. Lawrence and Churchill rivers, are described by Mr. M'Kenzie 'as of moderate stature. Their complexion is of a copper-colour, and their hair black, which is common to all the natives of North America. It is cut in various forms according to the fancy of the several tribes, and by some is left in the long lank flow of nature. They very generally extract their beards; their eyes are black, keen, and penetrating—their countenance open and agreeable.' Some individuals have been seen with full beards. The tract of country situated to the north-west of the Knisteneaux is inhabited by the Chippewyans—all the territory between 60° and 65° N lat. and long. 110° and 100° West, they consider as their lands and home. But tribes of this race border in the east on the Knisteneaux, and extend on the west to the Pacific, and on the north to the territory of the Esquimaux. At least this is to be inferred from ethnographical analogies, for tribes who speak their language are found over this vast district even as far south as lat. 52° N on the Columbia river. 'Their complexion is swarthy,' says M'Kenzie, 'their features coarse, and their hair lank—but not always of a dingy black—nor have they universally the piercing eye which generally animates the Indian countenance.' 'The men in general extract their beards, though some of them are seen to prefer a bushy black beard to a smooth chin.' The tribes situate to the westward in the vicinity of the Pacific, have been described in a similar manner, with the exception of their complexion, which is said to be of a 'light copper-colour,' accompanied with long lank hair and black eyes. Mr. Hearne remarks of these Indians, that their complexion 'is somewhat of the copper cast, inclining rather towards the dingy brown; that their foreheads are low, cheek bones high, eyes small, and their hair black, strong and straight. 'Few of the men have any beard; this seldom makes its appearance until they arrive at middle age.'"—See ethnographical section of article AMERICA.

"The Esquimaux inhabit all the northern regions of the continent stretching along the Arctic seas from the Atlantic to the Pacific, and a considerable distance south along the shores of the two oceans. The western tribes appear to be the most assimilated

to the general type of the American race, and as their language and customs connect them with those toward the east, it is possible that the varieties observed in the colour and features of the latter are owing to foreign causes. Generally upon the northern coast opposite to Asia, the inhabitants are stout and short, of a swarthy colour, with thick lips, black eyes and hair, thin beard, and high cheek bones. Further to the east, the Esquimaux met by Hearne, on the Coppermine river, are described as of small stature, and a dirty copper-coloured complexion, though some of the women are more fair. According to Crantz this race is of a dwarfish size, the face is broad and flat, the cheek bones high, the eyes black, the hair long, straight, and black, and the hands and feet small. Their colour, he says, is olive, though there are some who have a moderately white skin, but the children are born white. Captain Back, in lat. 67° long. 94°, observed Esquimaux who had a luxuriant growth of beard; their eyes were obliquely placed; and it is remarkable that they were not tattooed. 'The male Esquimaux have rather a prepossessing physiognomy, but with very high cheek bones, broad foreheads, and small eyes, rather farther apart than those of a European. The corners of their eyelids are drawn together so close, that none of the white is to be seen; their mouths are wide and their teeth wide and regular. The complexion is a dusky yellow, but some of the young women have a little colour bursting through this dark tint. The noses of the men are rather flattened, but those of the women are rather prominent. The males are, generally speaking, between five feet five inches and five feet eight inches high, bony and broad shouldered, but do not appear to possess much muscular shape. But the most surprising peculiarity is the smallness of their hands and feet.' Captain Graah says, 'the Greenlanders inhabiting the southern part of the west coast, (and it is to be observed, this is the coast upon which the ancient Icelandic settlements were probably made,) have little in their exterior in common with genuine Esquimaux; and the inhabitants of the country about the bay of Disco in North Greenland, and the natives of the east coast seem to me to have still less. They have neither the full fleshy person, nor the prominent paunch of the Esquimaux, but are on the contrary slender and even meagre. They are moreover distinguished from the Esquimaux, by a uniformity of head and cast of countenance which is handsomer and more expressive. The women and children have many of them brown hair, and a complexion scarcely less fair than that of our peasantry. But as I should not venture to conclude, that the Esquimaux about Hudson's bay have any claims to the honour of a Roman parentage from the circumstance of Sir Edward Parry's having seen many a good Roman nose among them, neither do I conceive, that the natives of the east coast of Greenland are descended from the old Icelandic colonies, because in some points they resemble Europeans. Their lank hair, their black and somewhat Chinese eyes, their disproportionally large hands and feet, their temper and disposition, their manners, customs, and language, all indicate that they are of the same stock originally with the Esquimaux. Some few of them wear beards and mustaches, but by far the greater number eradicate the beard as it appears.' Captain Parry says of some Esquimaux, N lat. 67°, long. 85°, 'their countenances at the time impressed me with the idea of Indian rather than of Esquimaux features—but this variety of physiognomy we afterwards found not to be uncommon among these people.' The same traveller, in his general description of those at Winter island

and Igloodik, observes that they are of low stature, their hands and feet are remarkably small, their faces are generally round and full, eyes small and black, nose also small and sunk far in between the cheek bones, but not much flattened. 'In the young of both sexes the complexion is clear and transparent, and the skin smooth. The colour is scarcely a shade darker than that of a deep brunette, so that the blood is plainly perceptible when it mounts into the cheeks; the eyes are not horizontal, but much lower at the end next to the nose than at the other. The hair is black, glossy, and straight. The men wear the hair on the upper lip and chin from one to one and a half inch in length,—and some were distinguished by a little tuft between the chin and lower lip.' It seems most probable, therefore, that the aberrations from the general physical standard, observed in the eastern Esquimaux, have been occasioned by a European intermixture; by intermarriages, probably, with the lost Icelandic colonists alluded to by Captain Graah. Of the western branches of the race the colour and features are essentially the same as those which characterize the aborigines generally. It thus appears that a most striking physical uniformity prevails among all the American tribes, that the variations from the predominant type are trifling and infrequent, and where they do exist, may in several cases be traced to intermarriages with individuals of the white or black race."—See articles *ESQUIMAUX* and *ТОНУКТЯНЕС*.

"It remains to inquire whether the ancient and civilized nations of the United States, Peru, and Mexico belonged to the same race. If the tribes now inhabiting Mexico and Peru are to be regarded as the descendants of those nations, the question would meet an easy solution; but the peculiar conformation of the ancient skulls found in the mounds, and the singular physiognomy observed in the human representations upon the Mexican paintings and monuments, afford some cause for hesitation. But it should be remembered that in the early stages of art, there is a tendency to delineate monstrous and exaggerated figures, which at a subsequent period, when more elegance and correctness are attained, custom, prejudice and superstition having once rendered sacred, are never abandoned. The Egyptians, says Plato, having once determined upon the forms to be exhibited in their paintings and sculptures, it was no longer lawful for painters or other imitative artists to attempt any innovation. That such an arbitrary rule prevailed in Mexico, where, from the absence of the art of writing, it became necessary to adhere to the forms which had been adopted in their hieroglyphical paintings, not only appears reasonable, but is manifest by the most cursory examination of the picture-writings. Accordingly we find in some cases, particularly in their sculpture, when it was designed to represent real individuals, that the style is changed, and the figures approach nearer to the present Indian physiognomy. In one respect the representations on the monuments and paintings are assimilated to the type of the Red race; for with the exception of some sacred figures probably intended to denote the white and bearded Quetzalcoatl, they are all delineated as beardless. The enormous size of the nose, which it is difficult to suppose ever characterized any people, was naturally exaggerated by the first artists, in consequence of the retreating forehead, with which it was accompanied. The custom of cranial compression was common to many American nations, and may be clearly traced, not only to the barbarous, but civilized races. The unusual forms thus given to the skull are not universally the same. Thus Charlevoix observes, 'there are on

this continent some nations, which they call Flat-heads, which have, in fact, their foreheads very flat, and the top of their heads somewhat lengthened. This shape is not the work of nature: it is the mothers who give it to their children, as soon as they are born. For this end, they apply to their foreheads, and the back part of their heads, two masses of clay, or of some other heavy matter, which they bind by little and little, till the skull has taken the shape they desire to give it. It is quite the reverse with certain Algonquins amongst us, named Round-heads, or Bowl-heads, (*Têtes de Boules*), whom I have mentioned before, for they make their beauty consist in having their heads perfectly round, and mothers take care also very early to give them this shape.' Adair describes another form among the Choctaws and other southern tribes. 'The Indians flatten their heads,' he remarks, 'in divers forms, but it is chiefly the crown of the head they depress. The Choctaw Indians flatten their foreheads from the top of the head to the eyebrows, with a small bag of sand; which gives them a hideous appearance, as the forehead naturally shoots upwards, according as it is flattened; thus the rising of the nose, instead of being equi-distant from the beginning of the chin to that of the hair, is by their wild mechanism placed a great deal nearer to the one and further from the other.' The same practice, he adds, prevails among the tribes 'around South Carolina and all the way to New Mexico.' Accordingly we find that the Waxsaws and Natchez distorted the natural shape of the head by similar artificial means. The Flat-head tribes west of the Rocky mountains and on the Columbia river have carried the same custom to a frightful extent; their heads present an inclined plane from the crown to the upper part of the nose,—a peculiarity which is produced in the following manner. 'Immediately after birth, the infant is placed in a kind of oblong cradle, formed like a trough, with moss under it. One end, on which the head reposes, is more elevated than the rest. A padding is then placed on the forehead, with a piece of cedar bark over it, and by means of cords passed through small holes, on each side of the cradle, the padding is pressed against the head. It is kept in this manner upwards of a year. When released from this inhuman process, the head is perfectly flattened, and the upper part of it seldom exceeds an inch in thickness.' The Charibs compressed the heads of their infants by boards and ligatures, and rendered the forehead so flat, 'that they could see perpendicularly when standing erect;' and the Arrowauks practised the same custom, endeavouring, however, to give the crown of the head a greater elongation. In South America, according to Condamine, 'the appellation Omaguas, in the language of Peru, as well as Cambevas in that of Brazil, given to the same people by the Portuguese of Para, signifies Flat-heads. For they have the whimsical custom of pressing between two plates the forehead of their newly born children, in order to give them this singular shape, and make them, as they say, resemble the full moon.' 'Among the variety of singular customs prevailing in these nations,' says Ulloa, 'one cannot help being surprised at the odd taste of the Omaguas, a people otherwise so sensible, who, to render their children what they call beautiful, flatten the fore and hind parts of the head, which gives them a monstrous appearance; for the forehead grows upwards, in proportion as it is flattened, so that the distance from the rising of the nose to the beginning of the hair exceeds that from the lower part of the nose to the bottom of the chin. And the same is observable in the back part

of the head: the sides also are very narrow from a natural consequence of the pressure; as thus, the parts pressed, instead of spreading conformable to the common course of nature, grow upwards. This practice is of great antiquity among them, and kept up so strictly, that they make a jest of other nations calling them calabash-heads. In order to give children this beautiful flatness, the upper part of the head is put, soon after their birth, betwixt two pieces of board, and this is repeated from time to time, till they have brought the head to the fashionable form.' The Mantas, consisting of several tribes subdued by the Incas, are described by Garcilasso de la Vega, as having their heads very much deformed. 'As soon as their children were born, they applied to the front of the head and the back of the neck two small boards, between which they compressed the head, until they had arrived to the age of five years; and by these means the head became flat and very long.' There are various authorities to show that artificial pressure of the cranium was common to many Peruvian nations, and none more satisfactory than the decree of the Synod of Lima, (passed 1585,) cited by Blumenbach, which prohibited the custom,—at the same time alluding to it as formerly universal in Peru. Dr. Morton has traced it likewise into Venezuela and Nicaragua. The same learned naturalist, in his researches into American craniology, has arrived at the conclusion, that the American nations, excepting the Polar tribes, are of one race and one species, but of two great families, which resemble each other in physical, but differ in intellectual character, and that the cranial remains discovered in the mounds, from Peru to Wisconsin, belong to the same race, and probably to the Toltec family. The skulls from the mounds are described as being flattened on the occiput and frontal bones, 'in such manner as to give the whole head a sugar-loaf or conical form, whence also their great lateral diameter and their narrowness from back to front,' and the result of his investigation seems to be, that this peculiar configuration, as well as that of the Mexican heads represented in their sculptures and paintings, appears to result in part from the application of mechanical pressure. But there are other crania brought by Mr. Pentland from Peru, which it is supposed belong to an ancient and extinct race. They are remarkable for their unusually great length and narrowness; the face is very projecting, the forehead retreating, so that the facial angle is smaller than in any known race of men; the os frontis is continued far backwards towards the vertex, and is very long, narrow and flat. By the discovery of these skulls the interesting question has been presented to naturalists, whether they are of a natural form, or altered by art. Professor Tiedemann says, 'a careful examination of these skulls has convinced me that their peculiar shape cannot be owing to artificial pressure. The great elongation of the face, and the direction of the plane of the occipital bone are not to be reconciled with this opinion, and, therefore, we must conclude that the peculiarity of shape depends on a natural conformation. If this view of the subject be correct, it follows that these skulls belonged to a race of men now extinct, and which differed from any now existing.' But it is clear that the habit of mechanical compression of the head was common to many American nations, and prevalent in Peru. 'There is no race on the globe,' says Humboldt, 'in which the frontal bone is more depressed backwards than in the American.' 'The custom of flattening the head had its origin in the idea that beauty consists in such a form of the frontal bone as to characterize the race in a decided manner.' In fact, Wal-

deck saw in Yucatan profiles of the present Indian race similar to those sculptured at Palenque; those ancient profiles, he says, are at an angle of 74°, which must be attributed to the custom of flattening the head. It is true these differ in form from those of Peru under consideration, but the alteration by compression has been as great. In view of the various processes which were used, the nature of the substances which were applied, and the parts which were compressed, it does not seem improbable that the singularly shaped Peruvian skulls may have been altered by artificial means. The tendency of the cranium to lateral expansion under a pressure from the front and back, which does not appear to have taken place in these heads, may have been prevented by ligatures or other mechanical applications to the sides of the head. The testimony of Dr. Pritchard is strongly to this point; 'it is more probable,' he says, 'that the ancient skulls of Titicaca owed their strange configuration to a process, which we know is capable of explaining the phenomena, than that they constituted an original race, a circumstance of which we have no other evidence than that derived from the shape of the cranium. Professor Scouler has given the sketch of an infant skull of one of the Columbian tribes, which is as much elongated as the skulls brought by Mr. Pentland from Titicaca.' It thus appears that there are no decided and general characteristics yet clearly ascertained, which separate any of the ancient civilized nations from the great American family,—nor any peculiar cranial conformations, which might not be justly attributed to the prevalent custom of altering the head by mechanical applications, so as to produce that form, which, according to aboriginal notions, possessed the highest degree of beauty.

"In the prosecution of our inquiry as to the number of primitive races, it becomes necessary to examine, in the next place, in what points of physical appearance the American and Mongolian races are assimilated. The Mongols have exercised an important influence in the affairs of Oriental Asia, having at different periods subjected Hindostan, Siam, Thibet and China. Hordes of this race roam over the vast regions of Siberia, and are found wandering from China to the banks of the Dnieper; and it is probable that in ages far beyond the scope of authentic history they have been distributed still more widely. Considerable confusion has been occasioned by the incorrect application of the term Tartars to the Turkish race, an appellation which is now too well settled to admit of change. It appears to have been originally applied by Asiatic writers to the Mongol race, and when the Turkish tribes were subdued by them, the name passed from the princes, who were Mongols, to their subjects. 'Remusat, who, with Klaproth, had determined the original identity of the Mongols and Tartars, proposed to confine the latter appellation to the former race. But in the utter commixture of the northern tribes, to use Tartar as a generic name, would lead but to further confusion.' The Tartars, as the term is now understood, belong to the Caucasian family, and in their physical characteristics they are distinguished by an oval head, a fresh, white complexion, and great beauty and symmetry of countenance. The Mongol physiognomy is widely different, and is nearly allied to the American; the complexion is described by most physiologists as of an olive or yellow colour, but as will be seen, there are some tribes in Siberia of a regular copper colour.

"Commencing on the western shore of Behring's straits, we find the Tchutski, who are divided into two classes, the Sedentary and the Wandering.

They may be clearly identified with the American family, as well by their language as by their manners, customs, and appearance, and it is thought they are of American origin. They speak the same language, however, as the Koriacks, or Koroiki, a tribe in their vicinity. The resemblance in their customs to those of the Americans is not peculiar to this nation, but is common to many others of Siberia, and no argument, therefore, in favour of their American origin can be drawn from that circumstance. 'From what I have seen of the Koriacks,' says Cochrane, 'I have no doubt of their being of the same tribe as the Tchutski; they have the same features, manners, and customs, and the same language.' According to a Russian author of great authority, 'the language of the Tchutski is derived from that of the Koreki, and differs from it in dialect only;' 'they agree in most of their customs and habits with the Kamtschadales,' and 'the Tchutski should be accounted a race of the Koreki.' The Koriacks are also divided into two tribes; the wandering family are of smaller stature. They are described as having long black hair, small eyes, a short nose, and large mouth. Strahlenburgh says that they have no beards, but only a few loose hairs scattered over their chins. 'The Lutorzi,' he adds, (the Tchutski?) 'who live eastward of the former, and towards the coast of the main ocean, were, as to shape, customs, and language, the very same with the Koroiki, except that they made their habitations under ground.' 'They are beardless like the Laplanders, Samoides, and Ostiaks; for, in the first place, they have naturally very little hair about the mouth, and what little they have, they pluck out, as do also the Yakuti, Tungusi, and Kalmucks.'"—See articles MONGOLIA, TARTARS, and LAPLAND.

"The Kamtschadales are swarthy, of a small stature, have straight black hair, high cheek bones, oblique eyes, and scanty beard. It has been supposed of this people, as well as of the Tchutski, that they were of American origin; an idea which Captain Cochrane pronounces ridiculous.

"The Yakuts are of a low stature, with long black hair, but little beard, and 'their complexion is a light copper colour.' The Mantchoos belong to the Tongoo, or Tungusi race, and resemble them in appearance and features; and the latter, besides the oblique eye, black hair, and slender beard of the Mongols, are described as 'copper-coloured.'"—See article JAKUTS.

"The Burretti, the Calmucks, and the Mongols near Bogdo, are all described as of a complexion varying from a yellow or swarthy hue to a brownish red or copper-colour, with small beards, black hair, and oblique eyes.

"The Chinese, Japanese, Siamese, and other inhabitants of Indo-China, all present the same general physical type, modified in various degrees, but conforming in a great measure to the characters of the Mongols; and the same race appears to have penetrated into Thibet, Bootan, and Nepaul. The close analogy which exists between the Mongol and American families, notwithstanding certain diversities which have been observed, cannot be better illustrated than by the testimony of travellers, and of those who have had personal opportunities for direct comparison. 'There is a great resemblance in feature,' says Mr. Andrews, 'between these Indians along the banks of the Rio Chico in South America, and some of the people I have seen in the East, especially the mixed breed of Chinese and Malay in Java. The high cheek-bone, sharp angular eyes, and small beards, agree.' 'I shall only remark further,' observes Mr. Bell, 'that from all the accounts I have heard and read of the natives of Canada,

there is no nation in the world which they so much resemble as the Tongoos.' 'The American race,' says Humboldt, 'has a striking resemblance to the Mongol nations, which include those formerly called Huns, Kulans, and Kalmucks.' 'The viceroy of Brazil retains a dozen of the native Indians in his service as rowers of his barge. We observed the Tartar or Chinese features, particularly the eye, strongly marked in the countenances of these Indians. The copper tinge was rather deeper than the darkest of the Chinese, but their beards, being mostly confined to the upper lip and the point of the chin, together with their strong black hair, bore a very near resemblance.'

"Chinese colonists have been imported into Brazil, and afford a valuable opportunity of contrasting their appearance with the native Americans. 'The physiognomy of the Chinese colonists,' says Spix and Martius, 'was particularly interesting to us, and was in the sequel still more so, because we thought we could perceive in them the fundamental lines which are remarked in the Indians. The figure of the Chinese is, indeed, rather more slender, the forehead broader, the lips thinner and more alike, and the features in general more delicate and mild than those of the American who lives in the woods; yet the small, not oblong, but roundish, angular, rather pointed head, the broad crown, the prominent sinus frontales, the low forehead, the pointed and projecting cheek-bones, the oblique position of the small narrow eyes, the blunt, proportionally small, broad flat nose, the thinness of the hair on the chin and the other parts of the body, the long smooth black hair of the head, the yellowish or *brilliant reddish tint* of the skin, are all characteristics common to the physiognomy of both races. The mistrustful, cunning, and, as it is said, often thievish character, and the expression of a mean way of thinking, and mechanical disposition, appear in both in the same manner. In comparing the Mongol physiognomy with the American, the observer has opportunity enough to find traces of the series of developments through which the eastern Asiatic had to pass, under the influence of the climate, in order to be transformed into an American. In these anthropological investigations we arrive at the remarkable result, that certain characteristics, which constitute the principal difference of the races, do not easily pass into others, whereas, those which depend only upon *more or less*, gradually vanish or degenerate, through a series of different gradations.'

"Of the Chiriguano, a Peruvian tribe, Mr. Temple says, 'They are of a copper-colour, approaching to sallowness, with long shining black hair, and as the Indians of South America generally are, without beards. Had I seen them in Europe, I should have supposed them to be Chinese, so closely do they resemble those people in their features.'

"'In some points of physiology,' remarks Mr. Davis of the Chinese, 'the people whom we describe bear a considerable resemblance to the North American Indians. There is the same lank, black, and shining hair, the same obliquity of the eyes, and eyebrows turned upwards at the outer extremities, and a corresponding thinness and tufty growth of beard. The Chinese, too, is distinguished by a nearly total absence of hair from the surface of the body. We may remark here that the Esquimaux, as represented in the plates to Captain Lyon's voyage, bear a very striking resemblance to the Tan-keas, or 'boat-people' of the coast of China, who are treated by the government as a different race from those on shore, and not allowed to intermarry with them. Whether the miserable inhabitants of the cold regions to the north have thus migrated south-

ward, along the coast, at some former periods, in search of a more genial climate, must be a mere matter of conjecture in the absence of positive proof."—See ethnographical section of article CHINA.

"Mr. Ledyard, who had personal opportunities of observing the peculiar physiognomy of the American Indians, and who had travelled through Siberia, is still more positive in his assertions, as to the resemblance between the Americans and Mongols. His testimony being of the highest kind, deduced from his own personal examination, we shall quote extensively from his remarks upon this subject, premising that in his use of the term Tartar, he applied it to all those tribes possessing the Mongol physical characteristics. In a letter to Mr. Jefferson from Sibe.ia. he says, 'I shall never be able, without seeing you in person, and perhaps not then, to inform you how universally and circumstantially the Tartars resemble the aborigines of America. They are the same people—the most ancient and the most numerous of any other; and had not a small sea divided them, they would all have been still known by the same name.' 'I know of no people among whom there is such a uniformity of features (except the Chinese, the Jews, and the Negroes) as among the Asiatic Tartars. They are distinguished indeed by different tribes, but this is only nominal. Nature has not acknowledged the distinction, but, on the contrary, marked them, wherever found, with the indisputable stamp of Tartars. Whether in Nova Zembla, Mongolia, Greenland, or on the banks of the Mississippi, they are the same people, forming the most numerous, and, if we must except the Chinese, the most ancient nation of the globe; but I, for myself, do not except the Chinese, because I have no doubt of their being of the same family.' 'I am certain that all the people you call *red* people on the continent of America, and on the continents of Europe and Asia, as far south as the southern parts of China, are all one people, by whatever names distinguished, and that the best general name would be Tartar. I suspect that all *red* people are of the same family.' And again: 'With respect to the national or genealogical connection which the remarkable affinity of person and manners bespeaks between the Indians on this and on the American continent, I declare my opinion to be, without the least scruple and with the most absolute conviction, that the Indians on the one and on the other are the same people.'"

II.—THE MALAY RACE.

"If the Mongolian occupies a larger portion of the surface of the globe, the Malay," says Dr. Pickering, "is yet the most widely-scattered race, and, in some respects, it is also the most remarkable. In institutions and social condition it exhibits, perhaps, greater variety than all the other races combined; and, from a universal instinctive attachment to the water, it almost merits the appellation of 'amphibious.' Endowed, too, with a wandering disposition, less regardful of a home than the rest of mankind, its march has been truly 'upon the waves;' and, beyond the Atlantic, it has reached almost every islet in the ocean that affords the least means of subsistence."—See article MALAY PENINSULA.

"The Malay complexion is very uniform, and is always decidedly darker than the Mongolian. I have never seen it light enough to show the least trace of a flush, nor, on the other hand, so dark but that the marks of tattooing were conspicuously visible. The colour may be termed reddish-brown, more nearly than in the Mongolian race, approach-

ing the hue of tarnished copper. The hair seems in greater quantity than in the other races, the Papuan, perhaps, excepted; and it is straight, or at most wavy, and usually raven-black. When cropped within about two inches, I have observed that it will generally stand erect, owing, apparently, to a coarser texture than in the Telingan and White races. The beard grows long, but is almost always thin, though some variety prevails in different countries. The East Indian tribes are nearly beardless, while among the Polynesians a beard is not unusual, though it does not seem to get strong till late in life. I have occasionally seen Polynesians, in whom the beard was nearly thick enough to conceal the skin. The practice, however, of eradicating it prevails very generally in the countries inhabited by the Malay race.

"In style of feature there is often no striking dissimilarity from Europeans, especially in middle-aged and elderly men, many of whom have the nose aquiline; while in females and young men it is almost always flattened. Nevertheless, I think it will be found that there is less prominence of profile in the Malay than in any other race. This appears to be owing, in part, to the absence of rigidity in the cartilage of the nose, as with the Negro. The lips are likewise thicker than among Europeans. The profile has appeared to me usually more vertical than in the white race, but this may be owing in part to the mode of carriage, for the skull does not show a superior facial angle. A more marked peculiarity, and one very generally observable, is the elevated occiput, and its slight projection beyond the line of the neck. The face, in consequence, when seen in front, appears broader than among Europeans, as is the case with the Mongolian, though for a different reason. In the Mongolian the front is depressed, or the cranium inclines backwards, while in the Malay it is elevated or brought forwards. The Mongolian traits are heightened artificially by the Chinooks; but it is less generally known that a slight pressure is often applied to the occiput by the Polynesians, in conformity with the Malay standard. A peculiarity in the Malay skull has been pointed out to me by Dr. Morton, in the tendency to unusual prolongation and projection of the upper maxilla. This character, though not universal, is strikingly exemplified in several East Indian skulls; and I have found traces of the same in the Hawaiian skulls obtained by the Expedition. It accords with the remark of Mr. Hale, 'that the upper lip is very often, among Polynesians, slightly turned up.'

"A remarkable variation in stature occurs," says Dr. Pickering, "in the Malay race. The Polynesians (particularly the Tahitians, Samoans, and Tonga islanders), appear to exceed in size the rest of mankind, while the East Indian tribes, and the inhabitants of the Indo-Chinese countries, fall decidedly below the general average. I will not undertake to offer an explanation, but there are facts connected with the nature of the food that have appeared worthy of notice. Both divisions of the race live principally on vegetable food, but there is this striking difference; the food of the East Indian consists almost exclusively of rice, while the Polynesian (to whom grain of every kind is unknown) draws his subsistence mainly from farinaceous roots, and from certain fruits of similar consistence. The further superiority in the stature of the Polynesian chiefs seems a remarkable circumstance, when we consider that they are hereditary. At the Hawaiian islands, residents declared that it depended very much on 'the greater quantity of food they obtained while young,' and I have reason to believe that the remark is not

without foundation. We are reminded here of the process of forming a queen among bees. At the same time, certain kinds of food are undoubtedly more favourable than others for fully developing the human frame."—See ethnographical sections of articles HAWAIIAN ISLANDS, MALACCA PENINSULA, MADAGASCAR, and NEW ZEALAND.

Mr. Bradford remarks, that, "in the opinion of Cuvier, the Malays are not easily referrible to either of the great races, but adds Cuvier, 'Can they be clearly distinguished from their neighbours, the Caucasian Hindoos and the Mongolian Chinese? As for us, we confess we cannot discover any sufficient characteristics in them for that purpose.' M. Lesson, also, who has bestowed great research upon these insular nations, has concluded that the Malays are a mixed race of Mongols and Indo-Caucasians. The complexion of the Malays is brown, from a light tawny or yellow hue to a deep bronze; the hair is long, lank, and black, the beard weak; their eyes are black and oblique, the nose full and broad towards the apex, the mouth large, the bones of the face large and prominent, and the head narrow and compressed. Their persons are generally below the middle size and somewhat robust. The real Polynesian nations are described generally as of a dark complexion, varying from olive through shades of reddish brown to a copper-colour, with long black hair, straight or curling, and scanty beards. 'The general complexion of both men and women (of the Polynesian tribes) is a dark coppery brown, but it varies from the lightest hue of copper to a rich mahogany or chocolate, and in some cases almost to black.' Sometimes features are observed which approach to the Caucasian variety.

"The natives of the Sandwich islands are described by Mr. Ellis as 'in general rather above the middle stature, well formed, with fine muscular limbs, open countenances, and features frequently resembling those of Europeans.' 'Their hair is black or brown, strong, and frequently curly. Their complexion is neither yellow like the Malays, nor red like the American Indians, but a kind of olive and sometimes reddish brown.' Mr. Ledyard remarks of the inhabitants of the Society islands, that 'they are tall, strong, well limbed and fairly shaped.' 'Their complexion is a clear olive or brunette, and the whole contour of the face quite handsome, except the nose, which is generally a little inclined to be fiat. Their hair is black and coarse. The men have beards, but pluck the greatest part of them out.' Of the Otaheitan, Captain Fitzroy says, 'To my eye they differed from the aborigines of southern South America, in the form of their heads, in the width or height of their cheek bones, in their eyebrows, in their colour, and most essentially in the expression of their countenances. High foreheads, defined and prominent eyebrows, with a rich bronze colour, give an Asiatic expression to the upper part of their faces; but the fiat noses (carefully flattened in infancy) and thick lips, are like those of the South Americans.' The natives of the Pelew islands are of a deep copper-colour with long black hair and scanty beard. They are well made and of middle stature. The inhabitants of Easter island were a handsome race with oval countenances, jet black hair, scanty beard, and black eyes. Here again, the resemblance between the Malays and Polynesians and Americans has attracted the attention of those who have possessed the opportunity of comparing their physical appearance. Of the Indians of Acapulco, in Mexico, Captain Basil Hall observes, 'their features and colour partake somewhat of the Malay character; their foreheads are broad and square; their eyes small and not deep

seated; their cheek bones prominent, and their heads covered with black straight hair; their stature about the medium standard, their frame compact and well made.' 'I had not long since,' says Mr. Smith, 'a striking proof of the visible resemblance between the figure, countenance, and whole appearance of the Malay and the American Indian. Mr. Van Polanen, late minister from the late Republic of Holland to the United States, and afterwards holding a high office at the Cape of Good Hope, and in the island of Java, on his return from the East, fixed his residence in Princeton. He brought with him two Malay servants. As they were one day standing in his door, there happened to pass by two or three Indians belonging to a small tribe, which still holds some lands in the state of New Jersey. When they approached the door, the attention of each party was strongly arrested by the appearance of the other. They contemplated one another with evident marks of surprise; and by their signs and gestures discovered their mutual astonishment at seeing such a likeness to themselves. Every person, indeed, who sees these Malays, and is acquainted with the countenance of our native Indians, is forcibly struck with the resemblance. The chief difference between them is, that the features of the Malays are more soft, the cheek-bone not quite so much raised, and the outline of the face somewhat more circular.' 'My first impression,' says Mr. King, 'upon seeing several New Zealanders in their native dress and dirtiness, was that they were a race intermediate between the Otaheitan and Fuegians, and I afterwards found that Mr. Stokes and others saw many precise resemblances to the Fuegians; while every one admitted their likeness to the Otaheitan. To me they all seem to be one and the same race of men, altered by climate, habits, and food, but descended from the same original stock.' And again, 'a word about the inhabitants and I leave the Keelings (islands). No material difference was detected by me between the Malays on these islands, and the natives of Otaheite and New Zealand. I do not mean to assert that there were not numbers of men at each of those islands to whom I could not trace resemblances, (setting individual features aside) at the Keelings. I merely say that there was not one individual among the two hundred Malays I saw there, whom I could have distinguished from a Polynesian islander, had I seen him in the Pacific."

III.—THE AUSTRALIAN RACE.

"The Australian," says Mr. Pickering, "may be characterised as having the complexion and features of the Negro, with hair in the place of wool. On closer examination, however, other points of diversity are remarked; and I think it will be very generally found that the forehead does not recede as in the Negro, an unusually deep-sunk eye giving it rather the appearance of projecting. The eye, at the same time, though uniformly small, is uncommonly piercing. With regard to other races somewhat approximating in personal appearance, the genuine hair will at all times distinguish the Australian.

"About thirty Australians came under my own observation, who neither had the lips so uniformly thick, nor the nose so much depressed, as in the Negro; but in certain instances both nose and mouth were wider. Some individuals were of surpassing ugliness; while others, contrary to all anticipation, had the face decidedly fine; and several of the young women had a very pleasing expression of countenance. The general form, though sometimes defective, seemed, on the average, better than that

of the Negro; and I did not find the undue slenderness of limb which has been commonly attributed to the Australians. Strange as it may appear, I would refer to an Australian as the finest model of the human proportions I have ever met with; in muscular development combining perfect symmetry, activity, and strength; while his head might have compared with an antique bust of a philosopher.

"The Australian complexion appeared to me fully as dark as that of the Negro; but I did not institute a critical comparison, neither did I see the two races in company. The hair seemed rather coarse, and instead of being perfectly straight was usually undulating, or even curling in ringlets. The head was by no means deficient, though less abundant than in the Feejeean.

"Although the range or territorial limits of the different Australian communities are carefully observed, the idea of any ownership in the soil does not appear to have occurred to these people. They neither at any time resisted the new-comers from Europe, nor did they withdraw from the contact; but they continue to ramble over their old domain, complaining only of the disappearance of the kangaroo. For this loss, which they attribute to the 'White man's kangaroo (the sheep and bullock) having driven away their own,' they consider themselves entitled to indemnity. On the frontiers, the natives doubtless occasionally spear the cattle; though it was evident that they have been far more wronged than sinning. They have further been peculiarly unfortunate in being exposed to the contact of such a class of people as the escaped convicts. According to common report, 'the natives cannot be induced to cultivate the soil, and are equally averse to all other kinds of labour;' but in the towns I met with one or two individuals who appeared to be engaged in some occupation. I am not aware, however, that any instance is on record of an Australian being employed as a mariner.

"A striking difference from the aboriginal Americans, and perhaps from all other known people, is found in the absolute rejection of all innovation by the wild communities. European customs or articles of manufacture do not make the slightest progress among them, and relations of commercial intercourse continue altogether unknown. In a region which has not added to the list of esculent plants, it does not appear surprising that cultivation should be unknown; especially as the soil rarely affords the capability. Moreover, such is the forbidding character of the natural vegetation, that this contributes very slightly to the sustenance of man; and I have sometimes doubted whether any different branch of the human family could have maintained its existence on the slender natural resources of Interior Australia. The original population, notwithstanding its sparseness, was yet in proportion to the means of subsistence; and the European accession has been owing solely to the introduction of sources of supply previously unknown. The Australians are strictly in 'the hunter state,' deriving their subsistence from game, and from the spontaneous productions of the country; and they can only be compared with the hunting tribes of America. The parallel, however, is not very obvious; and the Australians appear almost as anomalous as the inferior animals and plants of the same quarter of the globe. They have commonly been placed at the bottom of the scale of civilisation; yet in the few arts in their possession they have displayed singular ingenuity: for instance, in the method of ascending trees by making successive notches; the 'throwing-stick' for the light javelin; and especially the boomerang, the curved missile whose devious course

remained so long the subject of incredulity. Their manufactures, indeed, are chiefly confined to their peculiar weapons, which serve both for warfare and the chase. They also use defensive armour, the light oblong shield, which is rendered efficient only by the height of skill and activity."

Dr. Thomson, in a paper recently read before the Ethnological society, after remarking that the experience and observation of all travellers in New Holland during the last thirty years confirm the opinion that the aboriginal races of that country are gradually, yet certainly, in course of disappearance from the face of the globe, and that, from whatever cause it may be, the rude inhabitants of these extensive territories, over which we now claim jurisdiction, are on all sides steadily giving way before the rapid advances of the white man, says, "Of many tribes which not sixty years ago existed in the neighbourhood of Sydney, each numbering from 200 and upwards, several have already disappeared, as the Botany Bay tribe, the Five Islands tribes; and of others only a trace exists, to be seen occasionally wandering about the streets of the metropolis of New South Wales." Dr. Thomson considers it probable that in their physical characters these tribes do not differ greatly from each other; that such differences as are observed to exist may be easily accounted for by the climate and the supply of food of the districts in which each is to be found. He thinks, from a careful examination of the natives of various parts of New Holland, at points tolerably distant from each other, that they have had one common origin. His paper contained observations on some of the tribes inhabiting the neighbourhood of the Castlereagh and Lochlans branches of the river Macquarie; some of the tribes surrounding Moreton Bay, the Broken Bay tribe near Sidney, and a tribe inhabiting Albany island. Of the tribes which once inhabited the Castlereagh and Lochlans branches of the Macquarie river, several are said to be at the present time quite extinct. The Bogan blacks number not more than 100. These natives are generally about the middle height, body spare, hands and feet of tolerably good proportion; arms and legs, especially the latter, long; head rather round and oval, forehead rather broad, but low; the cheek bones rather high, the eyes sunken, the eyebrows arched; they have but little whiskers, but some of them have a good deal of beard on the chin, which is rounded off. The lips are thick and prominent, especially the upper one, the mouth being expressive of determination. The skin is dark brown, approaching to black, and very smooth. The hair is inclined to be long, soft, and silky, very glossy, and always curly. The women are well-proportioned in their youth, and the hands and feet of many of them are very small. In their manner and speech the aborigines of Australia are quick and animated, and easily excited. They are very revengeful, as many of the European settlers have found to their cost. Dr. Thomson says that "all the tribes have distinct markings, caused by longitudinal or transverse gashes on the breast, back, shoulders, and arms." He says all the heads he has examined are remarkably thick and heavy in proportion to the size, and he remarks that "nearly all of them had marks of waddy-blows and other injuries, which would have killed anything but a New Hollander."

Coming from among the Pacific islands, Mr. Pickering "was surprised at the facility with which the Australians acquire the English language, and at the correctness of their pronunciation. The latter circumstance is doubtless attributable chiefly to the frequent occurrence of terminal consonants in their

own languages. 'A child educated at a school in Sydney showed intellectual capacity equal in every respect to that of his European companions.' A difficulty, however, had been experienced in undertakings of this sort, in consequence of the mothers 'returning to claim and carry away their children.' Half-breeds must be rare, as I did not meet with an instance; but some were spoken of; and native women were occasionally seen accompanying the wagons from the interior.

"A great uniformity in the habits of the people appears to prevail throughout Australia; and it is only in the extreme north-east, in the immediate vicinity of Torres straits, that any important variation is known to take place. In this quarter Flinders observed the use of 'the bow; and he met with some individuals in the gulf of Carpentaria, who appeared to have been circumcised; but further west the usual Australian weapons again made their appearance.' A missile club, analogous to the Feejean, is represented in the '*Voyage aux Terres Australes*,' but belonging, I think, to a different part of the continent. The source of these innovations may readily be divined: but a greater one was found by Flinders at the Murray islands, immediately within the straits: 'the cocoa-nuts, bananas, and joints of bamboo filled with water, that were brought off by the natives,' showing a knowledge of agriculture; while at the same time, no physical difference from the continental Australians appears to have been remarked. There are other reasons for supposing that the Australian race does actually extend among the little-known islands of the same vicinity."

Mr. Earl, in a Memoir on the Tribes of the North coast of Australia, remarks that the natives of the north coast are not only less known to us than those of the other coasts of the island, but possess a peculiar interest from their proximity to the Indian Archipelago. "A circle," says Mr. Earl, "drawn round Port Essington, at a distance of 500 miles, would enclose almost an equal number of distinct tribes." The good understanding which existed between the colony and the natives in its vicinity induced parties of warriors and their chiefs to come from the remote interior to visit the whites; and in the month of April, when the Macassar prahus congregate at Port Essington, there may be seen, besides the tribes of Australia, people from many of the islands of the Archipelago. Mr. Earl, however, confines his observations to the natives of Australia who inhabit the coast from the Cobourg peninsula towards the east. Certain general characteristics, he says, are observable among all the tribes of this part of Australia. Thus their skin is invariably embossed with raised cicatrices; the septum of the nose is generally pierced among the men; and clothing is disregarded but by way of ornament; they paint their bodies. Their mode of treating the dead differs, however, from that in use among the tribes of other parts of the country. They leave the bodies wrapped in the bark of the tea-tree till nothing remains but the skeleton, which is then removed to the general cemetery, or placed in the hollowed trunk of a decayed tree. They are divided into three castes. They have some superstitions similar to those of the Indian islanders, while others are like those which pervade Australia. In the Cobourg peninsula there are four distinct communities, of which the most powerful occupies the southern coast and the islands of Van Diemen's Gulf; the upper part of the harbour of Port Essington being also in their possession. In the mountain-range there is a very numerous tribe—Marigianbèrk. Beyond these we know nothing; nor have

we much accurate knowledge respecting the tribes distributed between Jalakuru and the gulf of Carpentaria. With the Yaaks, or Croker island tribe, our acquaintance is of older date than with the others; the Raffles Bay settlement in 1827 was within their territory. These are described as most forbidding in appearance, and little better in disposition. Fear of the whites, however, secured their good behaviour. The Yarto and Byi tribes resemble each other in general characteristics, though their dialects are totally dissimilar. They are a better-looking people than the Croker islanders, and from the beginning showed great partiality for the English. The Bijna-lumbo tribe possess a superior physical organisation; and, indeed, Mr. Earl is inclined to think there has been some infusion of Polynesian blood among the aborigines of this part of Australia. Of the four dialects spoken by the tribes of the Cobourg peninsula, one only appears to differ from those spoken in other parts of New Holland; and this difference consists only in the words almost invariably ending in a vowel. This, however, seems only accidental. The consonants *f* and *s* are rejected throughout the Australian dialects; as is also the *h* aspirate. With the single exception mentioned above, two-thirds at least of the words end in a consonant, and often a double consonant, as *-alk*, *-tri*, &c.; the nasal *-ng* is very common. The natives of the coast, from frequent intercourse with the Macassar trepang-fishers, have picked up a good deal of their language, which is a dialect of the Polynesian; and as they spoke in this *patois* to the English on their first arrival, these latter, from ignorance, made vocabularies of it, taking it for the native language of the tribes. Mr. Earl, proceeding to treat of the great inland tribes, says that the communities in the interior are much more numerous and better organised than the coast tribes. One great chief, dignified by the title of rajah, has control over several large communities, each having its own chief. They live on the spontaneous produce of the country, which is abundant. Their hair, which is fine, is adorned with parrot's feathers or opossum's fur, and makes a very neat appearance. They are treated with great deference and attention by the coast natives. Mr. Earl looks upon these people as a kind of mixed race between the Polynesian and aborigines, who much resemble the Papuas of New Guinea. The people of Arnheim-bay are described as numerous and powerful, and very formidable when hostile: so say the Macassars. They are remarkable for their bulky forms and fine chests; their lower extremities, however, are not well formed, having the curved shin; their features are coarse, and the nose broad and flat, but the general expression is pleasing. All the males above twelve years old were circumcised. The western side of the gulf of Carpentaria is well-peopled; but beyond this, as far as the head of the gulf, the natives are few and scattered. Mr. Earl says he has observed that on the north coast of Australia the population bears a striking proportion to the quantity of vegetable food, to procure which the natives take great trouble, while they do not seem to be nearly so partial to animal diet.

"All visitors," resumes Mr. Pickering, "speak of seeing straight-haired individuals among the natives of the Louisiade; and one of the figures of the natives of Eastern New Guinea, contained in Belcher's Voyage, seems to correspond with the Australian. It seems also probable that, as we become better acquainted with this portion of the globe, there will appear less isolation in the customs of the Australians. We can at present refer to various connecting circumstances: to the use of a throwing-stick for the

javelin, in Eastern New Guinea, in New Britain, and even in New Caledonia; to the oblong shield or buckler, worn in the Louisiade and around Dampier's straits; and also to some corresponding methods of dressing the hair. Some words, too, appear to be in common: thus, *dundu* (the Australian name for the black swan) occurs in New Britain, where, according to Morrell and Jacobs, it is applied to a species of emu or cassowary."—See ethnographical section of the article AUSTRALIA.

"We come now to the controverted point of the physical race of the natives of Van Diemen's Land, situated to the southward of the continent. They were spoken of at Sydney as really distinguishable from the Australians by their 'woolly hair; peculiar, however, in its texture;' and, at the same time, all idea of affinity with the Negro race was rejected. Mitchell has some observations on the Tasmanians, and concludes in favour of associating them with the continental Australians; and this opinion seems the most probable. Indeed, the portraits of Labillardiere would have much weight with me, as they exhibit very decidedly the projecting forehead of the Australian. Not being aware of the presence of a Tasmanian in Sydney, I lost the opportunity of seeing him: those who were more fortunate were unable to recognise any resemblance in the Feejeans, whom we shortly afterwards visited."

IV.—THE PAPUAN RACE.

"The term 'Papuan,' notwithstanding some ambiguity, may be conveniently applied to a race of robust blacks, of whom the only examples I have seen (with probably one exception), have been the natives of the Feejee Islands. So far as my observation extends, the Papuan race differs from the rest of mankind in one remarkable physical peculiarity, the hardness or harshness of the skin. This point long since attracted the attention of those Tonga people, from whom Mariner derived his accurate notices of the Feejee islands. It is proper to add, that I have not examined the quality of the skin in the Negrito race.

"The hair of the Papuan is in great quantity, is naturally frizzled and bushy, and so coarse as to be rather wiry than woolly. When dressed according to the Feejee fashion, it forms a resisting mass, and offers no slight protection against the blow of a club. I have had occasion to remark that it actually incommoded the wearer when lying down; and to this circumstance, rather than to any foppery, I am disposed to attribute the origin of the wooden neck-pillow. The beard does not appear to grow so long, or to cover so large a portion of the face as in the White race; but the Papuan exceeds the remaining races, in the quantity of beard. The complexion is of a deeper shade than in the Malay race, but is much the same as in the Bengalee or Telugan. The features in many respects resemble those of the Negro, but the lips are not quite so thick, and the nose is somewhat more prominent; while a very general elongation of the face imparts a different aspect. I did not meet with a really fine head among the Feejeans, but the countenance was often grave and peculiarly impressive; and I had frequent occasion to remark, that strangers did not readily forget the features of Veindovi. In average stature, the Feejeans were found to exceed the White race; but they fell below the men of Tonga and Samoa. The profile in general appeared to be as vertical, if not more so, than in the White race; but this, I find, is not confirmed by the facial angle of the skull, and it may possibly be accounted for by some difference in the carriage of the head. The Feejeean

skulls brought home by the Expedition, will not readily be mistaken for Malayan; they bear rather the Negro outline; but they are much compressed, and differ materially from all other skulls that I have seen."

The Papuan race may be traced with tolerable certainty from the Feejee Islands to the shores of New Guinea. The population appears to be everywhere dense, and to be divided, as at the Feejee Islands, into two classes that are politically independent, the fishermen or people of the coast, and the mountaineers. The practice of cannibalism seems also co-extensive with the race, while the surrounding islanders, though often in a less advanced state of society, as generally hold it in horror. The Papuan race appears also to extend through a portion of the East India islands; but it probably does not occur to the westward of Floris, or Ende. Notwithstanding the various remarkable coincidences in customs, as the use of the neck pillow, circumcision, similar modes of dressing the hair, even to the staining of it of a flaxen hue, the Papuan race does not appear to exist in Eastern Africa. MM. Lesson and Garnot, describing the genuine Papuan race, say, "the colour of the skin is black, mixed with an eighth part of yellow, which imparts to it a clear tint of various intensity. Their hair is black, very thick, and moderately woolly. They wear it frizzled out in a very remarkable manner, or let it fall upon their necks in long and twisted masses. Their countenance and features are regular, except their noses, which are somewhat flattened, with the nostrils enlarged in the transverse direction. Their chins are small and well formed; their cheek bones are prominent, their foreheads elevated, their eyebrows thick and long. Their beards are thin; they let them grow upon the upper lip and chin like many African nations." In this description it will be perceived, says Bradford, that there is "just that degree of diversity from the Ethiopian or Negro, which a slight mixture with the Malay islanders of the Pacific might produce. This conclusion is strengthened by the circumstance, that as we proceed towards the Malayan islands, where the races may be mixed more equally, we find the Papuan complexion becoming lighter and approaching that of the Oceanic nations. Mr. Lesson, who supposes them to have migrated into the islands of the Pacific subsequently to the Oceanic tribes, traces a close resemblance between them and the dark-coloured tribes of Madagascar, a fact which adds to the force of our conjecture, for in that island, as will hereafter appear, there is also a race not aboriginal, distinguished by an olive colour, straight black hair and thin beard, and similar to the Malay race in their leading characteristics; and from which, by intermarriage with the Negro, has probably originated the very variety resembling the Papuas. It is curious, that in America, we find the same consequences attending the mingling of the two races. 'In this part' (of Brazil), say MM. Von Spix and Von Martius, 'we met with several families of the people called Cafusos, who are a mixture of blacks and Indians. Their external appearance is one of the strangest that a European can meet with. They are slender and muscular, in particular the muscles of the breast and arms are very strong; the feet, on the contrary, in proportion weaker. Their colour is a dark copper or coffee brown. Their features, on the whole, have more of the Ethiopic than of the American race. The countenance is oval, the cheek-bones high, but not so broad as in the Indians; the nose broad and flattened, but neither turned up nor much bent; the mouth broad, with thick but equal lips,

which, as well as the lower jaw, project but little; the black eyes have a more open and freer look than in the Indians, yet are still a little oblique, if not standing so much inward as in them, on the other hand not turning outwards as in the Ethiopians. But what gives these Mestizos a peculiarly striking appearance, is the excessively long hair of the head, which, especially at the end, is half curled, and rises almost perpendicularly from the forehead to the height of a foot, or a foot and a half, thus forming a prodigious and very ugly kind of peruke. This strange head of hair, which, at first sight, seems more artificial than natural, and almost puts one in mind of the plica polonica, is not a disease, but merely a consequence of their mixed descent, and the mean between the wool of the Negro and the long stiff hair of the American. This conformation of the hair gives the Cafusos a resemblance with the Papuas in New Guinea, and we therefore thought it interesting to give the representation of a woman of that race in her peculiar costume. To this it needs only to add, that with the Papuas of New Guinea 'the hair is long and woolly, and frequently forms a huge peruke three feet in diameter.' Thus it appears, that in three of the quarters of the globe, where the Negro and Mongolian races have intermarried, the physical result is nearly the same, a circumstance appearing to justify the inference, that the Papuas are a mixed race."—See articles FIJI ISLANDS and NEW GUINEA.

V.—THE NEGRILLO RACE.

"The Negrillo race has much the same complexion as the Papuan; but differs in the diminutive stature, the general absence of a beard, the projecting of the lower part of the face or the inclined profile, and the exaggerated Negro features. The hair also is more woolly than in the Papuan, though far from equalling in knotty closeness that of the Negro. On a direct comparison with the Negro, I have observed that the complexion appears to be rather red than black. Geographical distribution." Mr. Pickering continues, "sufficiently indicates that the Negrillo race once occupied more space than it does at this time, and that in many instances it has preceded the dissemination of other races."—See articles ANDAMAN ISLANDS, NICOBAR ISLANDS.

VI.—THE TELINGAN OR INDIAN RACE.

"The Eastern Hindoos, those at least who make visits to the East India islands, present great uniformity in their personal appearance; and in this respect they agree with the tribes and nations situated to the eastward of Hindostan. The complexion is much the same as in the two preceding races, and is so decidedly darker than in the Malayan, that by common consent it is called black; although, on comparison, the hue differs widely from that of the unmixed Negro. The true colour may be formed by mixing red and black; and in reference to the use of the term of 'purple-brown' and that of 'olive,' it should be observed that neither blue nor green enter into any variety of human complexion. The features approximate very closely to those of the White race; but, in general, the mouth appeared to be wider, the nose rather less prominent, and the lips sensibly thicker. The profile was observed to be less vertical than in the surrounding Malays; the lower part of the face projecting with a regular arch, as in the Mongolian; and there was a further correspondence with the latter race, in the frequent instances of the arched nose. The skin was ascertained to be very soft. The beard occurred more

frequently, and was decidedly more copious than in the Malayan race. The hair was straight and fine, and I have never seen it of any other colour than black. I have not met with Albinoes in the Telingan race."

VII.—THE NEGRO RACE.

"At the present day, the personal appearance of the Negro is generally familiar; and the thick lips, flattened nose, retreating forehead, close woolly hair, and dark complexion, have become proverbial. The Negro appears to exceed all other races in depth of hue, and in the close woolly texture of the hair is rivalled only by the Hottentot. The absence of rigidity and of a divided apex in the cartilage of the nose is a character common equally to the Malayan, and, probably, to some of the other races. In the case of two Albino children, the Negro aspect had so entirely disappeared, that they might have passed for the children of Europeans, but for the remarkable appearance of the hair, which I could only compare to a white fleece. The Negro race seems to occupy about one-half of Africa, and, excluding the northern and southern extremes with the table-land of Abyssinia, it holds all the more temperate and fertile parts of the continent. These limits, to all appearance, would not have been exceeded to this day, aside from foreign interference; but, as one consequence of the events of the last two centuries, the Negro race seems destined to fill hereafter an important place in general history."—See article NEGROES.

a. *Europeanised Negroes.*

"Negroes are now to be found in most parts of the globe where Europeans have established themselves; and although separate notices seem hardly to be required, I have selected the following. During a week spent in different parts of the island of Madeira, I met with no Negroes, except at the port of Funchal; and the few individuals seen at this place may have been connected with the foreign shipping. On the other hand, the population of the Cape Verd islands, judging from our hasty visit, appeared to be principally composed of Negroes; and they were living in a very rude state for the subjects of a civilised government. They, however, exhibited a certain air of independence, not seen in the same race in the United States. Brazil had more of the aspect of a European colony, although Negroes formed the most numerous class of the population of Rio Janeiro and its environs; and instances of even mixed descent were comparatively rare. Most of these Negroes were slaves; but very many were employed as soldiers in the military police. Others held places of honour and trust under the government; and one man was spoken of, as being distinguished for his abilities as an advocate. Several of the women too moved, with their Portuguese husbands, in the first circles of society. I was careful to look among the imported Negroes for traces of some different race; but I was unable to detect any; neither have I met with more success in other parts of America. A second race may have been sometimes included in the importations from Madagascar; but otherwise, I think, instances have been extremely rare; prior at least to the recent introduction by the English of people of Hindostan. Some Negroes were seen among the 'guachos' or mounted herdsmen of the Rio Negro, in North Patagonia. 'They had come by land from Buenos Ayres, and they hardly appeared to be on the footing of slaves. There are, perhaps, fewer Negroes in Chili than in any other

Europeanised portion of America. I do not remember seeing more than ten or twelve, during the eighteen days I spent in Chili, chiefly at the cities of Valparaiso and Santiago. In Peru, Negroes are common, but they are chiefly confined to the vicinity of the coast, where many of them are held as slaves, and where the practice of merely 'requiring them to furnish their masters with stated sums of money, had contributed essentially to the frequency of robberies.' Some of the free Negroes seen at Lima had reached the middle class of society, but I did not hear of any one who had acquired eminence, or who held an important office. In the churches, however, some deceased Negro priests had been canonised. Among the military, Negroes were sometimes observed in the ranks; together with a much larger proportion of persons of mixed origin, 'sambos and mulattoes.' In the region of the Andes I saw but one Negro, who held some subordinate office in a small village.

"In New South Wales I met with two or three Negroes in the streets of Sydney; but I saw none on my visit to the district of the Hunter river. Free Negroes were occasionally seen on such of the Polynesian islands as have resident Whites; having been derived, as in various other parts of the world, chiefly from the American shipping. I also met with a few half-breeds, between the Negro and Polynesian. Up to the time of our visit, no Negroes had taken up their abode at the Féejee group. Among the East India islands, Negroes seem to be very nearly wanting; and, indeed, we read of their being carried to the Indo-Chinese countries as curiosities. At Singapore, situated in respect to the route of travel at the entrance of the whole region, I met with three Negroes; and one of them had been introduced partly through the agency of Europeans. This man was large and muscular in comparison with the surrounding population, and was called a 'Keffri,' a class of persons said to have been originally imported from Mozambique into Southern India, and who bear a high character for fidelity. It seemed singular that their identity with the Negro was not recognised even by American residents. At Cape Town the lower class of the population appeared to be composed chiefly of Negroes; and, according to report, 'they had been derived principally from Mozambique and Madagascar.' They appeared to be more cleanly, and to live on a better footing with their White neighbours, than their brethren in our northern cities.

"At St. Helena, the Negro portion of the population, as already stated, 'had been derived exclusively from Madagascar.' A remarkable deviation from direct commercial intercourse may be here noted; the circumstance 'that slaves from Africa are now carried across the island of Madagascar, to be sold to Europeans from its eastern coast.' One or more Negroes from the United States had taken up their residence at Zanzibar, and others again at Bombay; conforming to the customs of their several adopted countries, and having no wish to return to the land of their nativity.

"In passing through the Mediterranean countries, I observed two or three Negroes at Malta, and as many at Marseilles; but I met with none at the Sicilian and Italian ports, nor in the interior of France. The general excellence of the Negro ear for music is a subject of common remark in the United States, and is manifested in many of the ordinary occurrences of life. Indeed it has been stated, apparently on sufficient grounds, that much of our popular music can be traced to a Negro origin. Observations on my recent journey have led me to suspect that some of this music may have a

yet more distant source, and one perhaps more ancient than is commonly supposed."

b. Arabised Negroes.

"With the exception of the two individuals at Singapore, I first saw Muslim Negroes in Egypt. In this country, the Negroes seem to be in a good measure confined to the two cities of Cairo and Alexandria; and, excepting a large body of soldiers, are principally employed as house-servants. It sometimes happens that one of them 'inherits his master's property together with the charge of his family;' in accordance apparently with ancient usage, with Abraham's selection of an heir from among the members of his household. Negroes are occasionally purchased and educated both by Copts and by resident Europeans; but the influences of locality prevailing, they do not form a distinct class from the Muslim Negroes. I do not remember to have seen Negro servants among the Jews, either at Cairo or anywhere in the East.

"I did not in Egypt observe Negroes engaged in the labours of agriculture. Neither, indeed, are they so represented on the ancient monuments; where Whites, distinguished by their profile from the proper Egyptians, are often serving in the capacity of slaves. Negroes are figured principally in connexion with and as illustrating the military campaigns of the eighteenth dynasty; and there is evidence, moreover, that one of the Pharaohs of this dynasty (Thouthmosis IV.) selected a negroes for his queen. I do not remember seeing Negroes represented on the anterior monuments, nor indeed on those of a much later date; though I did not, as carefully as the case requires, search the records of the Ptolemaic conquests.

"I am not aware of any fact contravening the assumption that Negro slavery may have been of modern origin; and the race even seems to have been very little known to the ancient Greeks and Romans. I have seen the Negro skull which was exhumed in the island of Malta, among the ruins of Haderkim; but, in the absence of inscriptions, I am not aware that any date has been assigned to these anomalous constructions, other than referring them indefinitely to idolatrous times. In regard, however, to the general subject of the ancient Oracles, I will mention, on the authority of Dr. Schembri, that 'the name of 'dodon' is to this day applied by the Maltese to a particular variety of black pigeon.'

"At Suez I remarked one Negro among a party of 'Arabs of the Hedjaz,' and this man wore the same costume, and appeared to be living on a footing of equality with his companions. At Mocha Negroes were numerous, and they had been derived from two distinct portions of Africa. Some had come, like those of Egypt, from the White River of the Nile, and were called 'Nuba.' These were 'highly esteemed as soldiers, and, as such, were kept in numbers by some of the more powerful chiefs of Southern Arabia.' The majority, however, of the Negroes I saw at Mocha had been brought from Zanzibar. At Mocha I also met with a class of persons more or less mixed, who were called 'HADEM,' a term which appeared to be equivalent to that of 'low people,' and which was used in other instances to be mentioned hereafter. They were characterised as 'a sort of Arabian Negro coming from the Interior or the Desert, who, among other usages, practise eating dead animals.' Of the individuals pointed out to me, some were not distinguishable from the Arabs of the country; but others presented traces of Negro descent, and one man had the aspect of an unmixed Negro.

"At Muscat the influx of Negroes appeared to be exclusively from Zanzibar, and, excepting those brought as slaves, they consisted chiefly of Soahili. The latter were perhaps only visitors, since they compose the principal part of the crews of the numerous dows trading to the African coast. The Soahili are all Muslims, and I did not hear of any who were held in slavery in this part of Arabia; but at Mocha I met with slaves who called themselves Soahili. In the streets of Bombay I frequently fell in with Soahili, who belonged, as before, to the Arab shipping. But at Singapore I saw none of these people, and their absence was confirmed by the testimony of the Abyssinian Arab. At Zanzibar the Soahili were found to assume the exclusive management of the small dows trading along the coast as far south as Mozambique and Madagascar; while another, and, in their own estimation, a more responsible class of navigators, direct the larger vessels to Arabia and North-western Hindostan. The Soahili are a mixed nation, consisting principally of Negroes, but embodying the remains of an infusion of Whites; and many individuals among them would not be distinguished from Arabs. The inhabitants of the fertile islands of Zanzibar and Pemba are chiefly Soahili, together with, in all probability, the mass of the population at Mombas and in the Arab towns in the delta of the Juba. Soahili, however, are scattered along the coast beyond these limits, and adventurers sometimes join the caravans of the interior Negroes, and make visits to the Great Lake, or, in conjunction with Comoro men, form independent trading expeditions for minor distances. The Soahili language has, in consequence, become the medium of commercial intercourse along the eastern coast of Africa. It contains numerous foreign words, derived principally from the countries around the Persian Gulf; but it is properly a Negro language. At the same time, instances may probably be found of the transmission of words in the opposite direction."

c. Malayised Negroes.

"This class of people is confined to the immediate vicinity of Eastern Africa, and constitutes the chief part of the population of the Comoro islands and Madagascar. The languages and customs of these islanders are not Arab, but correspond with those of the East Indies; and most of the plants cultivated have evidently been derived from the same quarter. There are no records and no existing intercourse. Aboriginal Negroes may, or may not, have once dwelt upon these African islands, but the state of things now prevailing is clearly the result of East Indian colonisation. Indeed, the Malayan race is actually present in Madagascar, and is still dominant there; and as to the time of arrival, it is sufficiently evident that Malay influence has preceded the visits of the Arabs. The Madagascar people seen at Zanzibar, with the exception of the two Ovahs already noticed, were all Negroes, who did not even present any distinguishable traces of Malayan admixture. I did not hear that any of them had voluntarily left their native country, but many appeared to be free; and a cluster of their houses was pointed out to me as an example of the Madagascar style of building. All the Madagascar people whose origin I ascertained, belonged to the 'Sakalava' nation. Comoro men were found to be yet more numerous at Zanzibar, where they form a very considerable portion of the population of the city. I was equally at a loss to discover in the Comoro men any traces of the physical Malayan;

and some of them assured me that "there are no long-haired people upon their native islands."

d. Aboriginal Eastern Africa.

"On one of my visits to the slave-market at Zanzibar, a Negro among the bystanders attracted my attention on account of the rudeness of his dress and his whole appearance. The race was evidently pure; and if there was any peculiarity, it was only in the beard being nearly wanting. On inquiry, I learned with surprise that he was an aboriginal of the island; and further, that having come from an unfrequented district, he was acquainted with the original language. He searched out two other 'Hadem,' in order that I might hear him converse in it; but these, it appeared, could only speak Soahili. A vocabulary would doubtless have been interesting, and I regret being unable to give more than a single word, *monakela*, which signifies 'a small boy.' Zanzibar, being situated nearly 20 miles from the main land, these circumstances have a bearing on the question of the original population of the Comoro Islands and Madagascar.

"The following details respecting the tribes which inhabit the main land of Eastern Africa were collected at Zanzibar.

"The WANIKA possess the country around Mombas, and their towns were found by Dr. Krapf to be 'protected by being built in clumps of thick woods;' it is presumed, against the incursions of the Ethiopian tribes who border on the north and partly on the west. The Wanika are known at Zanzibar only as slaves, and, as such, are in request for the special purpose of 'procuring toddy;' for, from living on the coast, they have been accustomed to climb cocoa-palma. Notwithstanding that they were said to be common on the plantations, I fell in with but a single individual. This man bore the marks of national designation, consisting of a single notch filed between the two upper front teeth, with numerous small scars on the breast.

"A detached tribe of Negroes are found upon the African coast north of the Wanika in the delta of the Juba. The Sultan of Patta termed them 'Pokomo,' and also 'Hadem;' and he spoke of them as 'rather a good sort of people, who will pull a boat up the Oozy, being relieved at each town by a fresh set of hands. They live on one side of the river, the other side belonging to the Galla.'

"The CHAGA dwell in the interior, to the southwest of the Wanika, and on the upper part of the Pungany river. All accounts of the Chaga agree in representing them to be an agricultural and a Negro nation. Individuals were said to be common at Zanzibar, but I did not succeed in finding any. In all my inquiries respecting the people of Eastern Africa, I could not hear of pastoral Negroes, nor of Ethiopian cultivators; but there are some undetermined tribes holding an intermediate position along the borders of the cultivable soil, who may offer trifling exceptions. These minor tribes are situated to the westward of the Wanika, and apparently to the northward of the Chaga, and they may be conveniently noticed in this place.

"The WAKAMBA, already alluded to, have, by some writers, been termed 'Merremengo.' Sadik stated that 'they are not bad people, but all the same with the Monomoia;' they trade and do not fight. They do not bring slaves, except a few, but trade in ivory.' Dr. Krapf, writing from Mombas, considers them a kindred nation to the Wanika and M'Sigua, but as having no affinity with the M'Kuafy, and it may therefore be inferred that they use a Negro

language. He further states, that they 'live partly among the Wanika and partly extended into the interior, that they throw their dead in the bush, and that some lead a pastoral life, and possess a fine breed of cattle.' I did not meet with any of the Wakamba, although they were spoken of as not rare at Zanzibar.

"The WATAITA seem also to be borderers, their country 'commencing not more than a five days' journey from the coast.' They were spoken of as 'good people, who do not fight unless the Wakamba come out against them.' Sadik called them 'Wanika, but a different nation.' They were enumerated among the tribes pillaged by the M'Kuafy.

"The TAVARTI dwell to the westward of the preceding: and a girl belonging to this tribe was seen at Zanzibar. She was apparently in the condition of a slave, though not of the lowest class; and she spoke, it was said, neither the Chaga nor the M'Kuafy language. Her hair was cropped close; and from the hasty glance I obtained, I was unable to decide whether the Negro race was entirely pure.

"The WAMPUGO appear to be quite a local tribe; dwelling, according to the M'Kuafy lad, 'on the river Ruvu, which comes into the Pungany, and not more than half a day's journey from his own country.' Sadik said that 'they brought ivory, and not slaves.'

"The MONOMOISY, on the other hand, occupy an extensive territory, which is situated far in the interior of the continent, and is bounded on the west by the 'Great Lake.' An Arab informed me, 'that on his journey to the Monomoisy country he crossed numerous rivers coming from the mountains; none of them, however, of greater depth than mid-leg, and donkeys had been taken the whole distance. He was four and a-half months in going, and was absent in all three years; but he did not visit the Lake. He returned with a party of 700 persons, and was only 76 days in reaching the coast.' I did not inquire of him the point of arrival; but I would observe, that, according to some authorities, Kilwa (Quilwa) is nearer than Zanzibar to the Monomoisy country. In some memoranda communicated to me at Zanzibar, I find the following statement of a Soahili, who 'was eleven months absent on a similar journey. He saw the Great Lake, which has many islands. The canoes carry from five to fifteen men. He did not go armed while he remained among the Monomoisy. The kings fight much among themselves. The Monomoisy have no money, but they are fond of beads and brass.' I learned, moreover, that the imaum has some sort of patriarchal influence with the Monomoisy, and that the great caravans, which come to Kilwa and to the coast opposite Zanzibar, 'bring him a present, and look to him for protection during their stay.' Beasts of burden appear to be entirely unknown to the Monomoisy; and the ponderous elephant tusks, when brought to the coast, have been sometimes found to contain a little box or other article, deposited under the fancied idea that 'it will lessen the weight.' According to Sadik, 'the Monomoisy trade only in ivory, and do not bring slaves; but sometimes a bad fellow among them will manage to sell his friend.'

"The WABIZA (Moviza of some writers), who have been alluded to above, appear to be the neighbours of the Monomoisy on the south. According to another account, 'they dwell at the Great Lake, and generally come to Kilwa.'

"The N'YASA, who inhabit the islands and perhaps the further shores of the Great Lake, seemed to be the most distant tribe known at Zanzibar. Individuals in the state of slavery were not uncommon;

and one of them stated 'that he was one day in reaching the Great Lake, and spent another in crossing it, making two days to the Monomoisy country.'

"The M'SIGUA dwell on the coast, and appear to be much scattered among the Wanika, although their proper country, I believe, is south of the Pangany river. Individuals were commonly seen in the slave-market at Zanzibar, where they were recognized by the numerous small scars on the temples.

"Dr. Krapf speaks of the M'SAMBARA, who dwell somewhat further in the interior, as 'a kindred nation to the M'Sigua, Wanika, Wakamba, and Soahili;' grounding his opinion, it is presumed, principally upon the affinities of language. With the exception of the M'Sigua, almost all the slaves offered for sale at Zanzibar had been brought from the southward, and principally from Kilwa. Small dows arriving from that place were crowded with the living freight; and the influx was represented as being much greater at a different season of the year.

"The MAKUA occupy the coast immediately to the northward of Mozambique, and trade with that city. They were spoken of as 'bad people, who kill the crews of vessels that happen to get on shore; and dows, in consequence, do not visit that part of the coast, unless several are in company.' A Makua girl, pointed out to me in the slave-market, bore the national mark of a crescent-shaped scar in the middle of the forehead.

"The district of the M'KINDO is back of Kilwa; and a man of this tribe, who was seen in the slave-market, was only 'two days in reaching Kilwa.' A slave girl, who likewise belonged to a tribe near Kilwa, had a thread-like scar a little below the hair, quite encircling the head.

"The country of the M'HIAO is much further in the interior, and must be extensive, since it furnishes a large portion of the slaves offered for sale at Zanzibar. The markings vary in different individuals, but often consist of raised scars or welts, crossing each other like stars. Many of the females have the upper lip perforated; and the opening enlarging with age, at last forms a false gaping mouth, which destroys all natural expression of countenance, and singularly disfigures them. I once observed two M'Hiao women, free residents of Zanzibar, in the act of purchasing one of these elderly deformed persons.

"On comparing the various circumstances already mentioned, it may, I think, be inferred that if the outlet of the Monomoisy river or lake is upon the eastern coast, it is to be looked for only in the Juba. It may also be observed, that the mouth of the Juba being situated in barren territory, its waters must be derived from a distance, either from the mountains of Abyssinia or from the rainy region to the southward. Some of the Negroes imported from Mozambique into Rio Janeiro had come from the southern part of the above-described slave-district; and Mr. Hale met with Wakondy, M'Hiao, and Makua. Others, however, had been brought from further south, as the TAKWANI, from the Zambezi river, and the N'YAMBANA, from Inhambane. The latter were observed to be marked in a singular and unique manner with a row of fleshy knobs like buttons, which had been artificially formed upon the forehead.

c. South Africa.

"There were no KAFFERS at Cape Town at the time of the visit of the Vincennes; but from statutory and other sources I obtained abundant evidence that

these tribes belong physically to the Negro race. They appear, however, to be more familiar with pastoral life than their brethren on the north; but they agree in their dialects, which, according to Mr. Hale, form a subdivision of the same general language. A fortnight previous to our arrival, some families of the Fingee tribe were encamped in the vicinity of Cape Town; but on visiting the spot designated, I found that they had departed. The owner of a neighbouring plantation stated that 'a large body of Fingoes once remained there for several weeks, and formed a regular town or "kraal." Their hair was exactly like that of the Negro; but the complexion varied, in some individuals being nearly as light as that of the Hottentot, and in others quite black. The men marry as many wives as possible, as by this means they secure at all times a support.'—See ethnographical section of articles *CAFFRARIA* and *CAPE OF GOOD HOPE*.

f. Western Africa.

"I have seen aboriginal Negroes of Western Africa only at Rio Janeiro, where I enjoyed the advantage of being present during many of Mr. Hale's examinations, and of thus learning the precise place of origin of the different individuals. They mostly belonged to the countries south of the equator, to tribes speaking dialects 'of the Congo-Makuan subdivision of the general language, such as the BENGUELA, KASANGI, and CONGO; the KAMBIDA, from the Congo river; and the MUNDJOLA, from the country back of Loango.' The Negroes from the coast north of the equator, or from Guinea, had been brought principally from Mina, a port in the Ashantee country. They as a class, and particularly individuals from the far interior, were much dreaded by the planters. I saw one man who spoke a little Arabic, and 'in the instance of a former insurrection, the slaves were said to have corresponded in this language.' I would remark in reference to the condition of Western Africa, that the descriptions I have read exhibit, on the part of the natives, no deficiency in shrewdness and natural good sense, accompanied, however, by a grossness of manners not found in those parts of the world which I have visited.

g. Central Africa.

"Natives of Central Africa were chiefly seen in Egypt, where, through the assistance of Dr. Gasparino, I was enabled to learn the history of a number of individuals selected from the Negro regiment. On inquiring for SHILLUK, several were at once pointed out, but it appeared that the term, as here used, had reference to height of stature, rather than to the river tribe bearing the name. The persons designated called themselves JANGA; and one very tall man 'came from the mountains, and spoke the Denkawi language.' Three other Janga, one of whom was short, were from the plains. Three individuals called themselves NUBAWI, the name of the class of Negroes who have been already mentioned as well known at Mooha and in Southern Arabia.

"One Negro from Kordofan termed himself an Arab, and said that his language was the Arabic, and the same account was given by three other natives of that country, although they were all manifestly of unmixed race. Another Negro styled his nation HAMAJAUWI. And two individuals were from FASOGLO. It appeared that all present, without exception, came from the Bahr-el-Abiad, or the White River; and as late accounts place Darfour within

the valley, it is quite possible that no Negroes may reach Egypt from countries beyond the waters of the Nile. I did not find in Egypt the scars and marks on the skin, or the filed teeth, which usually distinguish aboriginal Negroes. In the slave-market I remarked among the females considerable variety in the mode of dressing the hair, and much pains had been often taken to form it into rolls, or, in other instances, into numerous slender braids. I once observed the eyelids coloured with blue paint, as a substitute for 'kohl,' which latter material would hardly in this instance have been conspicuous on the complexion. The Negroes seen in Egypt appeared to me unusually slender, even after making every allowance for the style of dress.

"At the present day, three important Muslim-Negro kingdoms are found along the southern border of the Desert—Darfour, Bornou, and Soudan. An account of the two last may be found in the work of Denham and Clapperton. Darfour is less known, although, in the eye of the Egyptian Arab, it ranks as one of the three great political powers which divide the earth, the two others being Persia and Constantinople. At Singapore I saw two Negroes in the shop of the Abyssinian Arab, who, in their deportment, in their air of resolution and self-respect, seemed a different class of beings from those of their race I had previously met with. On inquiry, I was informed that 'the black Arabs come chiefly from Sennaar,' and on regarding the two individuals more closely, I thought I could distinguish the costume of Bornou, as figured by Denham and Clapperton. It appears, however, from Burckhardt, that pilgrims very rarely come from as far west as Bornou, and the probable origin of the above individuals may have been Kordofan or Darfour. The head was habitually uncovered, and one had the wool so close as fairly to justify the appellation of 'pepper-haired,' which is so universally applied to the race in Eastern countries. They had doubtless come by the way of Mocha. But I did not meet with the same costume on my recent journey."—See articles *CAFFRES*, *NEGROES*, *SUDAN*.

VIII.—THE ETHIOPIAN RACE.

"The Ethiopian race is in some measure intermediate in personal appearance between the Telingan and the Negro. The complexion, too, seems generally darker than in the Telingan race, holding the third rank in depth of hue. The hair is crisped, but fine in its texture, and I have never seen it wiry, as in the Papuan, from which latter race the Ethiopian differs, in having a soft skin and European-like features. Various modern travellers have been struck with the resemblance of the Ethiopian to the Telingan race. The same circumstance was noticed in ancient times by Herodotus, who also speaks of the remarkable beauty of those living southwest of Arabia, an opinion in which, from actual observation, I am now prepared to concur.

"The Ethiopian race occupies the hottest countries of Africa. Most of its tribes are purely pastoral; and some of them are, perhaps, alone acquainted with all the recesses of the Great Desert. The only portions of the race that are known to lead an agricultural life are the Nubians of the Nile, and some of the tribes bordering on the table-land of Abyssinia. The Ethiopian race was not seen in its purity during the voyage of the exploring expedition, but it was doubtless present among some of the mixed Arabs of Singapore. My acquaintance with it commenced on the day of my landing in Egypt.

NUBIANS.

a. Barabra of the Nile.

"The Barabra found in Lower Egypt are principally adventurers from the banks of the Nile in Nubia, who seek employment for hire, and after a series of years return to their own country. They are favoured in certain particulars by the government, being 'exempted from military duty, and being sometimes employed as taskmasters, an occupation in which they particularly excel.' They are extremely clannish, and strong antipathies exist between them and the common Egyptian Arabs. Old residents have assured me that they have never known in Lower Egypt of an instance of mixed offspring between these two classes. Some of the boats on the Nile are manned and commanded by Barabra, who, however, hardly form mixed crews, or serve under Arab commanders. These Barabra boatmen appeared to belong principally to the immediate vicinity of the Cataract, where a fondness for the water is acquired in early life; and they perhaps correspond to the 'Ichthyophagi of Elephantine' mentioned by Herodotus. A third class of Barabra are the 'Jellab,' who procure slaves on the upper parts of the Nile, and conduct them in slave caravans to Cairo and Alexandria. A fourth class consists of a large portion of the slaves, those who in Egypt are termed 'Abyssinians.' Such as I saw offered for sale were nearly all children and half-grown persons, having their hair dressed with much pains, according, apparently, to their respective national fashions. Some of the children proved to be 'Galla,' but through the diversity of dialects, their place of origin could rarely be ascertained, and they, perhaps, had not all been derived from the southern border of Abyssinia. On ascending the Nile, I met with the first instances of mixed descent at Kenneh, the modern capital of the Thebaid, about 30 m. below the site of ancient Thebes. Market-women of the Ethiopian race likewise made their appearance at Kenneh, where a change took place in the weights and measures, and cowries were seen used as money, and where articles from 'Hindi' were commonly offered for sale, such as black pepper, which had been brought, together with dates and coffee, from Mecca. Above Kenneh, men walking with spears were occasionally met with, and, according to the words of my Barabra servant, 'thief had finished.' The true boundary, however, between the two races, appears to be at Silsilis, about 100 m. above Thebes, and 40 m. below the Cataract. The Kennoos begin at this point, and with them a change takes place in the mode of raising water for irrigation, a task now accomplished by means of the wheel. I saw numbers of Kennoos on landing at different places, and particularly at Assouan and Philæ, the limit of my journey. The Barabra boatmen above mentioned, hardly appeared to form a distinct class. Contrary to the practice of the Arabs, the women were observed to take much pains in braiding and dressing their hair in a variety of modes; but they had other customs which they had evidently borrowed from the Arabs, as the use of kohl or eye-paint, and of tattooing, both continued, notwithstanding the deep hue of the complexion. The Kennoos are all Muslims, but they do not appear to regard very rigidly some of the observances of their religion, and swine were seen at Assouan. At the same place I fell in with a body of slaves on their way down the river, and also with an Arab merchant, proceeding with bales of goods to Sennaar.

b. Barabra of the Desert.

"The ABARDEH inhabit the eastern desert of the Thebaid, between the Nile and the Red Sea; and I met with individuals at Kenneh, and at other towns higher up the river, but principally at Assouan. The Ababdeh use the Arabic language, and they do not understand that of the agricultural Nubians. An opinion, however, prevailed at Assouan, that they once had a language of their own, as the Bishareen now have, and that it was displaced by the Arabic. The Ababdeh 'bring charcoal to Assouan, procuring it within two, three, or more days' journey in the desert, and they occasionally bring ostrich eggs, obtained at a distance of not more than 200 m.' The BISHAREEN dwell in the district to the southward of the Ababdeh, and situated in like manner eastward of the Nile. Two individuals seen at Assouan enabled me to identify the physical race. One of them wore a pin for dressing the hair, similar to the Feejeean, but shorter and curved. The Ababdeh and Bishareen do not mix with their hair any foreign substance except ghee or butter, which in this climate is entirely fluid, and is an effectual safeguard against vermin. The curved club which these tribes have been accustomed to use, from remote antiquity, is small and light in comparison with that of the Feejeeans."—See articles ABARDEH, BERBERE, and BISHARI.

"I could hear nothing in Egypt of the Tibboo of the central Sahara; and it is possible that they may have no communication with the Egyptian Oases. Herodotus seems to allude to these people under the name of the 'Ethiopian Troglodytes;' and they are probably to be regarded as the proper aboriginals of the Desert. According to Horneman and others, the Tibboo continue in part pagan; and they hold their flocks about the widely separated wells and Oases, some of which are perhaps known only to themselves; yet in their trackless solitudes they are not altogether free from the depredations of the Tuarick and Arab. Some points in their history present unexpected analogy to the customs of the Australians; as their use of a curved missile, and their counterfeiting a lump of black basalt in order to elude observation, as the Australians counterfeit a burned stump. Denham and Clapperton moreover state, that the Tibboo couriers 'are the only persons who will undertake singly to cross the Sahara.' On my journey from Cairo to Suez I met the caravan returning from Mecca; but it was unfortunately at night, and I obtained a view of the travellers only by the light of their own torches. There seemed to be a large proportion of Ethiopians, many of them, doubtless, from Nubia; but some, who made inquiries about Alexandria, and maintained a more independent bearing than the Egyptian Barabra, may have belonged to the far west. The Ethiopian profile has appeared to me to have furnished the model for the Egyptian features of the earliest monuments, as far down as the conclusion of the eighteenth dynasty; and we may otherwise look in vain for representations of a people who at least must have been intimately known to the ancient inhabitants of the Thebaid. I am aware that the Desert tribes have been separately and distinctly delineated, though even here I would appeal to the profile; and after making every allowance for a conventional style of art, those highly finished portraits of Egyptians, in which the hair is disposed in numerous slender braids, have appeared to me intended for men of the Ethiopian race. The same rule respecting the hair will, I think, be found to prevail in the mummies (though few of these have proved

to be of greater antiquity than the Greek or Ptolemaic period); and the wooden neck-pillow accompanying the mummies was certainly not an invention of men of the White race. On the monuments of the eighteenth dynasty, men of the White race are frequently represented, but chiefly as slaves, or as foreigners; and they may always be distinguished by the profile from the Egyptians. The earliest unequivocal representations of the White race occur in the grottoes of Beni Hassan, excavated during the twelfth dynasty, or towards the conclusion of 'the time of the pyramids;' and it should also be observed, that some of the transactions here recorded seem connected with the first appearance in Egypt of the Hyksos or Shepherds."—See articles TUARICKS and TRIBES.

SOMALI.

"The Somali inhabit that projecting portion of the African continent which is opposite to, and hems in, the southern angle of Arabia; and they extend along the coast and more or less into the interior, from the Straits of Babel-el-Mandeb to the river Juba under the equator. Their country, although arid and intensely hot, affords pasturage, and seems eminently adapted for rearing a peculiar close-haired variety of sheep. The Somali also engage in maritime pursuits; and many of them are to be found established in separate communities, at the principal ports on the lower portion of the Red Sea. The Somali seem to be very much confined to the above limits."—See article SOMALI TERRITORY.

DENKALI.

"The Danakil tribes inhabit the district north of the Somali, and fronting on the lower portion of the Red Sea; and on a line with Zeyla, they appear to be much extended into the interior. They 'speak a different language from the Somali; and individuals visit Mocha for the purpose of bringing slaves, which they obtain in the interior, and which, it is presumed, are chiefly Galla. The Denkali were said to 'conduct themselves well while at Mocha, but to come only a few at a time.' The first individual I met with happened to be of short stature and short-necked; and he might readily have been mistaken for a Feejean, agreeing even in the disposal of his hair. Points of difference, however, were perceived on a closer inspection; and the other Denkali seen, did not differ physically from the Somali and Barabra.

GALLA.

"The Galla tribes have long been regarded as the terror of East Africa, and the extensive region they inhabit has been very little visited by strangers. The Galla are, for the most part, purely pastoral in their habits; but, according to Mr. Isenberg, the tribes bordering on the highlands of Abyssinia cultivate the ground.

"The NORTHERN GALLA furnish great numbers of slaves, principally women and children, who are sent by the way of Abyssinia into Egypt and Arabia. In the latter country many of the town Arabs are of partial Galla descent. I did not meet with like instances at Cairo and Alexandria, where, however, the Galla women hold a similar position with those in Arabia. Some of them, moreover, were married to European residents of the first respectability: having been carefully educated, they proved elegant and accomplished companions. At Zanzibar I met with but one of the Northern Galla, a slave-woman,

who called her nation 'Chory,' and who, according to her own account, came 'by the way of Mocha from Massowa.' The point of embarkation interposes an objection to affinity with the Bishareen, and she was expressly termed a Galla by the Arabs in company.

"The SOUTHERN GALLA are rarely slaves, but I heard of an instance in a 'Musagna' woman, who was the only representative of these tribes at Zanzibar. It was said, that in times of scarcity the Southern Galla will sell some of their number, who, however, are not esteemed; for when directed to perform any service, they will ask questions, or reply 'Go and do it yourself.' The nation is well known by report at Zanzibar, as frequenting the western bank of the Oozy, and intercepting the land-route from Bombas to Lamu, and as visiting the settlements on the coast for the purposes either of plunder or traffic. The Southern Galla refuse vegetable food, and live exclusively on milk and meat; the only semblance of an exception that I could hear of, being the fact, that they have been known to 'steal corn from the people of Brava.' The sultan of Patta and an Arab who was present at the interview, gave me the following account of the Southern Galla: 'Their country is called Bararata, and is situated eight days' journey from Patta; perhaps not including the 'two days to the river Oozy, where they come to trade. They bring cattle, which have a hump, and which are greatly superior to the Indian cattle at Zanzibar. They have camels, which they use for carrying burdens, but not for riding. They elect a king every eight years, and the new king circumcises his subjects. They shave the head, preserving a lock of hair on it for every man they have killed. Their king, when sent for, will come to Oozy; and, if a present were made, he would be willing to take an unattended European into the country, and would bring him back in safety; but if several persons wished to go, the visit would be impossible. For the last eighty-five years, or since the time of his grandfather, the Patta people have not been able to go into the Galla country. In person, the Galla are tall and good-looking, and resemble the M'Kuaifi, with whom they often fight; both nations having precisely the same description of hair. The Galla have strong beards, but these are habitually clipped. They have no bows; and in warfare they use only the spear (which is held, and is not thrown), protecting themselves with shields. They are very much afraid of fire-arms.'"—See article GALLAS.

M'KUAFI.

"The M'Kuaifi dwell in the interior, to the west of Mombas, and south of the proper Galla country. The following information respecting them was derived from young persons seen at Zanzibar; where, according to the Arabs, slaves of this class were formerly cheap and not much esteemed, but now bring high prices. A M'Kuaifi girl stated, that 'she had been captured by the Mussai, who killed her father and mother, and who sold her to the Chaga. She was twenty-five days in reaching the coast. Formerly, her nation was powerful above others; so that one woman with a stick would stop a thousand persons from passing through the country, unless a present was first made; but her people are broken, and at present they would not fight the M'Sigua. Her people do not cultivate the ground, and they eat only milk and meat. Children when hungry help themselves by direct application to the cow. Cattle are killed by piercing the spine; numbers of them every day, until each

family is supplied. The M'Kuafi have no fixed meal-times; but they eat whenever they feel inclined, inviting their neighbours of the same village to partake with them. Each family has its own cattle, which all go to pasture together, and outside the town is a place to receive them at night. The men marry as many women as they please, and each wife has a separate house. These habitations are tents of bullock-skin, supported by poles set around. The men decorate themselves with large beads, and their dress is made of skin, and consists of a painted cincture full of openings and hanging stripes, and of a long cloak worn over one shoulder. Cloth, however, is now brought by traders. The women, by way of ornament, coil brass wire about the arm as far as the elbow. The beads and brass wire are procured at Pemba, by selling ivory obtained from elephants, some of which are found dead, while others are purposely killed.'

MUSSAI.

"The Mussai hold the country west of the M'Kuafi; and they are the most distant of the pastoral tribes known at Zanzibar. According to the girl above-mentioned, they speak the same language as the M'Kuafi, with whom they agree in not cultivating the soil, and in living exclusively on milk and meat. Indeed, all the accounts show them to be a kindred nation. My interpreter, Sadik, had conversed with persons who, on a trading expedition to Chaga, saw there some of the Mussai. These were described as being 'like the M'Kuafi, but stronger; and as having shields that reach to the breast, together with long-pointed spears and round-headed clubs, neither of which are missile. The young men only go out to fight, sometimes five hundred of them in a body; and when they capture a town, they put to death all except the handsome women, remaining afterwards for two or three days upon the ground, lest they should seem to run away.'

OTHER ETHIOPIANS.

"I have felt much uncertainty respecting the physical race of the Fellata of Central Africa, especially as the descriptions of them by Denham and Clapperton seem to accord entirely with the Ethiopian. The Foulta, who dwell near the Western coast, are said to be connected in language and customs with the Fellata, except that they are not Muslims; and to differ from the Negro tribes among which they are scattered, in leading a pastoral life.

IX.—THE HOTTENTOT RACE.

"I am not sure that I have seen Hottentots of pure race; and in the following account I am obliged to rely in part on published figures and descriptions of them. Eye-witnesses uniformly agree in regarding the Hottentot as differing in physical race from the Negro, and they refer to the diminutive stature and the light complexion; the latter, in some well authenticated instances, having even been known to exhibit a flush. Both races seem to be alike in the texture of the hair, which is more closely woolly than in the rest of mankind; and to agree also in the general style of feature. But many travellers describe the Hottentot countenance as being to a marked degree peculiar. The three days I spent at the Cape of Good Hope were in great part occupied in an unsuccessful search for examples of the Hottentot race. Some individuals of mixed descent were pointed out to me, and I

thought I could myself distinguish others. A wagon from the Interior was accompanied by several individuals who differed in their personal appearance from mulattoes; and who, like the other mixed Hottentots I saw, were rather good-looking. Hottentots were said to be extremely serviceable, and indeed indispensable, to military expeditions; as well from their knowledge of the country, as from their intimate acquaintance with the habits of the Kaffer tribes. I have found many points of interest in the Hottentot character, as portrayed by travellers, who universally bear testimony to the faithfulness, efficiency, and courage of their guides in trying situations, amid the dangers of this difficult and desolate country. Unlike many wild tribes, the Hottentot did not shrink before the advance of Europeans; but readily adopting the habits of civilisation, these people have ever proved active and useful assistants of the colonist, their history in this respect contrasting strongly with that of the neighbouring Kaffer tribes. Indeed, the advantage of the Hottentot character appears to have contributed essentially to the admission of Europeans into this, the only part of Africa that has proved accessible to foreigners; and the benefit deserved a better return than unequal legislation. The following quotation is descriptive of the wild life led by the Bosjesmans of the frontier, who furnish abundant proof that man in his natural state is by no means a helpless animal. 'They live among rocks and woods; have a keen, vivid eye, always on the alert; will spring from rock to rock like the antelope; sleep in nests which they form in the bushes, and seldom pass two nights in the same place, supporting themselves by robbery, or by catching wild animals, as reptiles and insects.'

"Recent discoveries have shown that the Hottentot race is more widely diffused than was previously supposed, and that it extends in a scattered manner for an unknown distance towards the heart of Africa. According to the testimony of Owen, Morrell, and others, Hottentot tribes occur along the western coast as far as latitude 20° south, and remain, in some instances, still unchanged by contact with Europeans."—See articles *BUSHMEN*, *CAPE OF GOOD HOPE*, and *HOTTENTOTS*.

X.—THE ABYSSINIAN RACE.

"I have seen but few genuine Abyssinians, and these few have not presented among themselves a very uniform personal appearance. In a general way the race may be said to possess European features in combination with crisped or frizzled hair. The complexion, however, though it is often very light, does not appear ever to become florid. The race seems to be confined to the table-land of Abyssinia, and to its prolongation in a mountainous tract that extends towards the interior of the continent; but even within these limits there appears to be a large infusion of Ethiopians belonging to the Galla tribes. The Abyssinians, having been converted during the early ages of Christianity, continue to make pilgrimages to Jerusalem; but otherwise, their presence in foreign countries is, for the most part, involuntary. My first interview with Abyssinians took place at Singapore; where, on entering one of the principal shops, I was greatly surprised to find its three occupants differing in physical race from all the men I had previously met with. The wonder increased on perceiving their superiority in refinement and intelligence over the other Orientals around; and that although so unlike, they did not, on these points, seem to fall below Europeans. The hair was much alike in all three, and was crisped

and fine, neither coarse enough nor in sufficient quantity to form a resisting mass. The beard of one individual was in pellets, absolutely like the close wool of the Negro; but the prominence of nose, greater even than usually occurs in the White race, bore sufficient testimony to his purity of descent. The second individual had the face very much elongated, but the nose was not particularly prominent. The third individual had a straighter beard, which was black and grey in regular stripes, as in another instance already mentioned. The complexion was the same in all three, and though very light, was by no means of a sickly hue; and, indeed, these persons might readily have been passed in the street as belonging to the White race.

"I will here insert the opinions of two travellers in Abyssinia, communicated to me orally. Mr. Roobon regarded the Galla as differing physically from the Abyssinians, and spoke of the latter as being 'a fine set of people, men absolutely such as ourselves, and capable of doing anything that we can do; except only that they have been secluded from the remainder of the world.' Mr. Isenberg, whom I saw at Bombay, thought that 'under the same advantages, Abyssinia might rise to an equality with a European nation. In times of peace there is tolerable security for person and property, and the present condition of Abyssinia is not very unlike that of a European nation when distracted with civil war.' The Abyssinian is the third physical race, which will enter into the question of the primitive Egyptians. It seems, however, that the true Abyssinian, (as first pointed out to me by Mr. Gliddon,) has been separately and distinctly figured on the Egyptian monuments, in the two men leading a camelopard in the tribute-procession to Thouthmosis III.; and this opinion was confirmed by an examination of the original painting at Thebes."—See ethnographical section of article ABYSSINIA.

XI.—THE WHITE OR ARABIAN RACE.

"Europeans and European colonists are comparatively uniform in their complexion and personal appearance, and they can hardly conceal their origin by dress, even amid the population of Northern Africa and North-western Asia. The inhabitants of the two last-named countries present among themselves more diversity, although at the same time there is rarely any difficulty in recognising the physical race. The White race then, as it exists in northern climates, may be characterised by its superiority in lightness of complexion, in thinness of lip, in prominence of nose, and in length and copiousness of beard. No one of these tests is of itself sufficient to distinguish the race, for Abyssinians in some instances, rival it in prominence of nose; Telingans, or even Ethiopians, in thinness of lip; many Papuans have as copious a beard; and I have myself seen the florid complexion among Mongolians of high northern latitudes. So far, however, as my observation has extended, flaxen hair, red hair, and blue eyes, (albinoes being excepted,) are found only in the White race. The hottest portion of the globe appears to be about seventeen degrees in width, counting from lat. 27° N, and extends from the Atlantic ocean to the Ganges. One-third, perhaps, of this immense tract is inhabited by the White race, although often under a physical aspect that would not readily be acknowledged by Europeans. The complexion, always dark, is in frequent instances sufficiently so to conceal a flush; indeed the Malay-brown complexion seems rather to predominate; and I have seen Arabs of a deeper hue who yet were apparently of unmixed descent:

moreover, a considerable proportion of the inhabitants of Southern Arabia are nearly or quite beardless. In short, the White race is here protean or polymorphous, and exhibits a diversity in feature and complexion that I have not found in the other races. The prominence of profile is, however, for the most part, permanent; and I further remarked that the various series of expressions of countenance, which pertain respectively to the other races, appeared to be absent. It should be observed, however, that actual mixtures of race have been more frequent and more complicated in the southern Arab countries, and have been taking place there for a longer period, than in the other parts of the globe. While acknowledging that we are only beginning to be acquainted with the countries and people of the East, I have been impressed with one view of the circumstances, in correspondence apparently with an ancient condition of the human family. In the course of my recent tour, I was continually hearing from the lips of Orientals the words of different ancient and modern European languages, until at last the whole class of these languages seemed as if merely recomposed from fragments of Arabic and Sanscrit. Of fragments indeed, which have been disguised more or less by interchanges during some thousands of years; and if any European words can be traced to a different source, they at least remain to be pointed out. The same state of things appears to exist in the Malay class of languages, and instances have been discovered of English words which can be traced through the Sanscrit to the remotest islands of the Pacific. The rule may, perhaps, be further extended to the languages of the African continent; but whether applicable in any degree to the Chinese, or to the aboriginal American languages, I am uninformed. At the present day the White race may be conveniently disposed in two divisions, as well geographical, as differing in institutions and habits of life: the Frank or European, and the Oriental. The extraordinary intensity of heat, in some of the countries inhabited by the White race, may help to explain a portion of these differences. One of the above divisions may in some measure be said to rule the land as the other rules the sea; for the extent of the caravan routes is almost an equivalent to the universal maritime intercourse now attained by Europeans.

EUROPEAN COLONISTS.

"At the present day, Europeans and their descendants are to be found in most parts of the globe that are accessible by sea; the eastern coast of Asia, together with New Guinea and the neighbouring islands, forming the only considerable exceptions.

"Madeira, having been discovered in modern times, and having been found uninhabited, must be regarded as a colony; although in the character of its population it seems rather to form a part of Europe. A week spent at this island, chiefly in a journey with horses, of nearly a hundred miles, afforded me a fair opportunity of seeing the inhabitants. According to an idea commonly entertained in regard to the Spanish and Portuguese, I had anticipated universal swarthinness, with the hair and eyes invariably black; but I found as much variety in complexion and feature as at home, and many instances even of flaxen hair. The singularly rugged character of the surface (the roads intersecting deep mountain ravines and leading along the brink of frightful precipices), tends greatly to impede intercourse. At San Vincente, on the northern coast, we were told that but three travellers had visited

the place during the preceding four months: and one of the Catholic Fathers residing there, had grown grey in that single ravine, which he had never once left since his first arrival. The peasantry of Madeira appeared to be laborious, civil, and sober; but the idea of political rights, in all probability, seldom enters their heads; it may be doubted, whether the news of the great world around ever reaches them. In secluded situations we sometimes met with young persons in a state of nudity, and on one occasion, with several who were nearly full-grown. The strange tone of voice everywhere heard, was explained by Mr. Drayton; for it appeared that 'the peasantry in their conversation and music, habitually use the minor key.'

"During the few hours spent on shore at the Cape Verd Islands, I saw only three or four Whites; who were residing in the town of Porto Praya. They were sallow and languid; having evidently suffered in their health, from the powerful influence of the sun.

"At Rio Janeiro I did not find the like marks of a deteriorating influence in the climate; and the popular prejudice against the general healthiness of the tropics was soon perceived to be without foundation. In the city, artisans direct from Europe, were seen working steadily at their various vocations; some of which, such as that of the blacksmith, were peculiarly oppressive. In the course of an excursion beyond the Organ Mountains, I had an opportunity of witnessing some of the hardships of a life in Interior Brazil. I had previously imagined with many in the North, that the bane of tropical climates consisted in the absence of a stimulus to industry; and that the soil poured forth, almost spontaneously, a profusion of dainties in addition to the necessities of life; I was, therefore, unprepared to find the stigma of luxury reflected back upon my own countrymen, even upon those undergoing the reputed privations of our frontiers. Among other peculiarities in manners, derived to all appearance from the parent country, the seclusion of the women may be mentioned; for their existence in certain families appeared to be known chiefly through report.

"During our short stay at the mouth of the Rio Negro, in North Patagonia, I did not come in contact with many of the inhabitants. One of the pilots was a Frenchman, and the other an Englishman, and I met with three individuals from the United States. The remainder, about twenty in number, were 'guachos,' or mounted herdsmen; who (with the exception of some Negroes) were of Spanish descent, and who were rendered conspicuous in the distance by the scarlet and white of their fantastic dress. It has been said that the guachos, 'owing to their being perpetually on horseback, appear personally to disadvantage when dismounted;' I did not remark this, but I saw some well-formed men, who, moreover, did not appear to be deficient in either intelligence or general information. I observed, however, an evident disinclination to walking; and it must be a rare circumstance in this region to meet a man on foot. The country has such a desert aspect, that it is a matter of astonishment how the great numbers of horses and bullocks are enabled to procure subsistence. We here began to perceive an influence in the surface of a country, in modifying the habits of its population. In an open accessible region, men in the course of their ordinary pursuits, become accustomed to rove widely, tenfold more than in agricultural districts, or even a hundred fold more than where hemmed in by close woods.

"Northern Chili, although less barren in aspect

than the country on the Rio Negro, supports comparatively fewer cattle; but being broken and mountainous, irrigation, for agricultural purposes, is sometimes available. The climate seems extremely healthy, as is shown, among other circumstances, by the robust forms of the women of the lower orders. The hospitality and obliging disposition of the country people, formed a strong contrast to the habits of the Brazilians; and extended even to annoyance on our botanical excursions by the offer of horses. At a ball, given in honour of a victory, I had occasion to admire the good taste shown in the arrangements, and the dancing; an accomplishment in which the Spanish ladies are acknowledged to excel; and I was also struck with the similarity between such fêtes in this remote quarter of the globe, and those I had attended at home. It will be difficult to find another continental nation that is so completely isolated by natural boundaries; the Andes forming a barrier to the extension of population on the east, and the Atacama desert on the north. Chili is generally conceded to be in advance of the other Spanish American countries; among which it alone has enjoyed internal tranquillity. It should also be observed, that only in one direction can Chili conveniently carry on foreign war. The English language was found to be making progress in Chili. I often heard it spoken, and I observed translations on many of the sign-boards, both at Valparaiso and in the Interior; showing the numerical importance of customers from England and the United States. Of other foreign residents, those from Germany and France appeared to be the most numerous.

"California, the only other Spanish-American country I have visited, presented a third variation in the costume, which was again fantastic, and unlike anything European. The Californians are mounted herdsmen, skilled in the use of the lasso; and they are as expert in feats of horsemanship as their brethren of the far south. Great ignorance of geography and of foreign countries was found to prevail even among the upper ranks, as we had remarked at Lima. In the other countries visited by the Expedition, the European emigrants had not acquired separate nationality. They were rather residents; or if born on the spot, they nevertheless did not differ from the population of Europe and the United States.

"The Hawaiian is the only Polynesian group on which foreigners are established in sufficient numbers to form anything like society. Some hundreds of them, chiefly from the United States, were residing at the commercial centre, the town of Honolulu. The island of Tahiti has also become an important place of resort for shipping; but its commercial advantages are inferior to those of the Hawaiian group, and we met with but few European residents, who were unconnected with the mission. Europeans had but recently established themselves at the Samoan or Navigator Islands; and, excepting the missionaries, they consisted exclusively of runaway sailors. I met with seven on Savaii; and nearly a hundred were supposed to be scattered about the group,—some following the occupation of pilots, blacksmiths, or interpreters; but the majority content to obtain without labour the means of subsistence; and certain individuals had even adopted the Samoan costume. In various native families, White men were kept as a sort of pet, although 'they were at liberty to leave at any moment, provided that they took nothing away.' The value, however, of this description of property within a short time, had much depreciated in the estimation of the natives. Although Tongataboo has been so much frequented,

Europeans had not exerted much influence over the minds of the natives. Indeed, a low island like this, which produces chiefly cocoa-nuts and bananas, and is otherwise not an agreeable place of residence, may, probably, for years to come, offer a point of resistance.

"There were many European residents round the Bay of Islands, in New Zealand; and in the course of our excursions it was ascertained that runaway sailors were living in some of the native villages on much the same footing as at the Samoan Islands.

"In the East Indies we met with but two or three Europeans of the lower class, and these expressed dissatisfaction with their situation, and they evidently could not maintain themselves among the surrounding population. The European residents continue to be confined to those portions of the Archipelago which are under European rule; and they consist of the officers of government, civil, military, and ecclesiastic, and of a few persons engaged in foreign commerce. Persons of European descent, more or less mixed, now form an intermediate class of some importance. European power in Hindostan amounts rather to the possession of the government than to a proper colony; for, should it now cease, there would scarcely be a separate class of population left behind, except only in the instance of the mixed Portuguese. Of mixed European colonies, the most complicated, perhaps, is the recent establishment of the English at Aden, where, without counting the troops, the majority of the inhabitants appear to be voluntary emigrants from Hindostan.

HEBREWS.

"The White men met with previous to arriving at Singapore, had been exclusively of the European stock; and only at that place did the Exploring Expedition come in contact with Orientals—white men physically like ourselves, who yet differed from us in their customs, and who had not derived their arts and acquirements from Europe. The Jews, indeed, at the present day, are common to both divisions of the race, being spread abroad like a net throughout all the countries possessed by Whites, and even to a short distance beyond, in the instances of Abyssinia and India. Their various adopted countries having for ages exerted modifying influences, four classes may now be distinguished in the Jewish family: the Syrian, Indian, Arabian, and European Jews.

"I first saw SYRIAN JEWS at Singapore; some ten or twelve individuals, who were robed and turbaned, and who in person appeared to advantage among the surrounding population. The complexion was fair, and in a different costume they probably would not have been distinguished from Europeans. One of them who spoke English invited me into his shop, and stated, in the course of conversation, that 'he came from Aleppo when quite young, travelling by land with his father to India.' He knew nothing of the Malabar Jews, and, in respect to the origin of Black Jews, he showed us one in his service, who was of mixed Telingan descent. He was unwilling to acknowledge the fellowship of European Jews, some of whom he had seen at Calcutta, objecting that they shaved the beard, and in various other particulars he thought they had departed from the law. He spoke of a European Jew then residing at Singapore, but said that 'he should never think of questioning him on the subject of religion, unless on the occasion of a proposal to marry a daughter.' At Bombay I saw a Jew who, about twenty-five years previously, came by land from

Jerusalem. He stated, in regard to his journey through so many foreign countries, 'that he found Jews along the whole route, with whom he could communicate in the Hebrew language.' The agent of the English government at Muscat, a Jew, probably of the Syrian class, died a short time previous to my arrival in that city. I saw there, however, a young Jew from Bagdad, whose scanty turban included the Egyptian *turbush*, and who wore a side-lock, differing, however, in some respects, from that of the Arabian Jews. He carried a rosary, or string of prayer-beads, like the Catholics and Muslims—a custom of high antiquity. A Jew had resided for several years at Zanzibar, to which place 'he came in a dow,' it is presumed, for purposes of commerce. I did not learn his further history; but, from his allowing the whole of his beard to grow without regard to side-lock, I supposed him to be a Syrian Jew. I did not observe the side-lock among the Jews of Egypt, who likewise belong to the Syrian class. They inhabit a distinct quarter of the city of Cairo, where, as in Europe, their principal occupation appeared to be dealing in money. Their traditional accounts of Egyptian matters have not proved to be of much value. On viewing, however, the scenes of their early history, one can better realize the wonderful and unique development of a whole nation from a single family.

"At Bombay the INDIAN JEWS form a considerable body of artisans among the lower orders of the population. The greater proportion of them distinguish themselves as Beni-Israel, and, in the opinion of competent inquirers, the title had not been lightly assumed. Polygamy, I was informed, 'exists among the Beni-Israel, but principally when the first wife proves barren; and the ancient custom of marrying a brother's widow is not continued.' In such of the Beni-Israel as were pointed out to me, I did not perceive any peculiarity in personal appearance distinguishing them from the rest of this Jewish community, which presented an unexpected variety in feature, complexion, and even in costume. I observed, however, one point of agreement, in the head being shaved—entirely, in some instances, but usually in such a manner as to leave traces of a side-lock. The head-mantle, apparently a relic of the life of their forefathers in the desert, was used in the synagogue; and their religious service was the more impressive as being practised in the midst of an idolatrous population. 'A few years ago, the Bombay Jews were in a very low and degraded state, being dependent for the little Hebrew they possessed on the Arabian Jews, by whom they were held in very little consideration. The attention of the missionaries having been turned in this direction, the Bombay Jews were supplied with printed copies of the Scriptures, since which time their knowledge of Hebrew had become more general, and their condition in other respects had improved. They had expressed much gratitude for the benefit, saying, that the sun then rose upon them for the first time.'

"I saw numbers of ARABIAN JEWS at Aden, which place seems to have been principally inhabited by them prior to the English occupancy. They appeared to have preserved more of the primitive Hebrew customs than I have seen among their brethren in other countries. Their style of architecture offered unexpected analogy to the ancient Arabic, as depicted on the Egyptian monuments, the buildings being devoid of arches and of all curved lines, but having square towers with battlements, and at each story a projecting ledge. The men wore long side-locks, reaching from above the ear to the shoulder, and these may perhaps constitute the 'corners of the

beard' in the passage of Scripture which has sometimes been differently interpreted. The women had their eyelids and eyebrows painted, and they wore a large silver ring in the nose, and numbers of similar ones in the ears; children sometimes had their ears folded downwards with the weight of the rings inserted around the margin. Education, as among the southern Arabs, was general, and all the children attended school. In this scorching climate, the Jewish complexion, instead of being in any degree florid, presented a universal tinge of yellow, but it was obviously lighter than the hue of the common Arabs of the country. Some of the boys had a coarse expression of countenance, combined with flaxen hair, reminding me of faces seen occasionally in Northern climates, and at variance with the usual Jewish physiognomy. I do not remember, on any other occasion, meeting with flaxen hair among the orientals.

"It would seem that the Hebrew is not altogether a dead language with the Jews of Aden; but they commonly use the Arabic, which they write with the Hebrew character. I obtained from them a copy of the Pentateuch, 'written at Sanaa, in the interior,' and I saw another work in the Hebrew character, which 'had been brought from Bagdad.' It was said that the Aden Jews refused to hold communion with their Indian brethren, who had been brought to the place by the English, and that they worshipped apart. The Jews at Mocha lived outside the walls of the town in a village by themselves, and they consisted of artisans, especially builders, as at Aden. Notwithstanding a residence for many successive generations, the complexion remained lighter, and the beard longer than in the Arabs of Mocha. With respect to the Jews of Abyssinia, geographical considerations would lead us to suppose that they were originally derived from Southern Arabia, rather than by the route of Egypt and the Nile.

ARMENIANS.

"Of all Orientals, the Armenians, next to the Jews, are most frequently to be met with in the society of Europeans. They do not occupy much space in history, but it seems a remarkable circumstance that, without any decided distinctive traits, they should have preserved their nationality from remote antiquity. The range of Armenian emigration is chiefly a northern one, extending from the Mediterranean, by the way of Constantinople, to Northern Hindostan and to Calcutta. I heard nothing of Armenians in the Arab countries, nor in South-western Hindostan, except at the city of Bombay. Here I saw several of their tombs in the European burying-ground, and I remarked that they were provided with a niche for burning incense, like those of the Indian Muslims. In the Mediterranean, Armenians are now frequent passengers in the steamboats to and from the Levant, a circumstance attributable, in a good measure, to the extent of their commercial relations. Many Armenians are doubtless settled in the principal cities of the United States, although their presence may not be generally known."—See article ARMENIA.

ASSYRIANS.

"I have not heard of any modern distinctive name for the inhabitants of the valley of the Euphrates, and I have therefore had recourse to an ancient appellation. The district is well known on the Indian ocean as belonging to Turkey, its southern angle being interposed between Persia and the ter-

ritory of the Arabs. Formerly it was the seat of the power of the caliphs, and, although the lower country has been much overrun by Arab tribes, I believe there is some separate nationality remaining. From the geographical position, it seems probable that many natives of the valley of the Euphrates visit Hindostan and the shores of the Persian gulf; but none were pointed out to me on my recent journey, and, perhaps they are not generally distinguished from other Muslims.

MOGULS.

"I have not found a more convenient name for the modern Persians than that of Moguls, which I sometimes heard applied to them at Bombay, but the term, I believe, is also used in reference to rank. Numbers of these Persian emigrants were settled at Bombay, where they were distinguished by wearing, in place of a turban, a high pointed cap, made apparently of black lambskin. They seemed to be a rude, hardy, able-bodied set of men, and they were, perhaps, all of them, from the northern section of the country; for Persians wearing a different costume will be spoken of hereafter. They belonged among Muslims to the sect of Ali. I saw none of the above class of people at Singapore. But in the streets of Cairo I once met with several strangers who wore a somewhat similar dress, and who had, doubtless, come either from Persia or from a neighbouring country.

AFGHANS.

"Afghans were spoken of as being by no means rare at Bombay, and I met with two or three individuals wearing the Afghan dress, as this was described to me; but, in the absence of my interpreter, I could not ascertain their place of origin. Some 'Cabul people' were once pointed out to me at Bombay. These differed from the preceding individuals in their costume, and they strongly resembled the Sindians and Bedouins of Northwestern India. They wore a hemispherical cap on the top of the head."—See ethnographical section of article AFGHANISTAN.

SIKHS.

"Sikhs were well known at Singapore, which place they had reached by the route of the Ganges and Calcutta. An individual was pointed out to me, who was perhaps not a fair example of the nation, and who was obviously of mixed descent. His complexion was as dark as that of the Telinga people, but he presented points of resemblance to the Ethiopian, and even to the Negro race. Notwithstanding that the Punjab, or country of the Sikhs, is situated on the waters of the Indus, I did not meet with any of these people at Bombay.

PARSEES.

"The Parsees are the living representatives and remnant of the Persians of antiquity. And they continue, as in former times, to reject image-worship, and to pay their adorations to the elements, holding that of fire in more special reverence. They agree even in various minor particulars which are related by Herodotus of their forefathers, as in 'their names ending without exception alike; in those words which are expressive of personal or of any other distinction, terminating in the Doric *san*, which is the same with the Ionic *sigma*; and in their dead being never interred (placed in the cemetery) till some bird or dog has discovered a pro-

pensity to prey on them.' When compared with the Parthians of a somewhat later period, the points of resemblance will be found to be yet more numerous. Resident Parsees were spoken of at Singapore, but I first met with individuals at Aden. Their settlement here was in consequence of the English establishment; and, unlike the Banians, they are not found in other parts of Arabia. At Zanzibar, indeed, I met with two or three Parsee artizans, who had been engaged by the Imaum for temporary employment. The servants in some of the Bombay steam-boats were Parsees; and one of them, seen in full costume on the road to Cairo, reminded me of the strangely different auspices under which this people, after the lapse of ages, were revisiting the Valley of the Nile. The Parsees shave the head, and wear a round inner cap like that of the Arabs. They usually preserve the mustache, but they always shave the chin. Sometimes a portion of the hair is left on the sides of the head, in continuation of the whiskers; in accordance, in some measure, with the practice of the Pharaonic princes. The dress of the Bombay Parsees has varied perceptibly within two or three generations, but always within certain limits, as in respect to the fulness of the robe. The costume of the women throughout the East has a general similarity, whether among the Arabs, Hindoos, or Parsees. Unlike, however, the practice with the higher class of Arabs, the Parsee women do not conceal the face." See article PARSIS.

THE ARAB COUNTRIES.

a. Arab Colonists.

"Numerous adventurers from Arabia are scattered around the shores of the Indian Ocean and among the East India islands, seeking often a permanent residence in countries more desirable in every respect than their own. The Exploring Expedition first met with an Arab at Soolo, who has been already noticed while speaking of the Malayan race. At Singapore various individuals of dissimilar personal appearance, and even differing in physical race, laid claim to the title of Arabs. Moreover, we were here introduced to the extraordinary diversity of aspect which, independently of mixtures of race, prevails in the southern Arab countries.

b. Arabs of the Mediterranean.

"The little intercourse between the inhabitants of the northern and southern shores of the Mediterranean seems a surprising circumstance to a stranger from the United States; especially when it is considered that this little is chiefly carried on through Gibraltar and Malta. The identity in language has contributed to throw the traffic into the hands of the Maltese; numbers of whom are now settled around the southern and eastern borders of the Mediterranean. On my subsequent visit to Malta I was better prepared to distinguish the many coincidences with the customs of the Arabs, as in the style of architecture, in the female dress, and in the fashion of early marriages. Also, in the four-pronged anchors, such as I had seen used in the Indian Ocean; where, moreover, I had been reminded by the practice of towing a boat under sail, of some of the incidents narrated in the Voyage of St. Paul. The painted row-galleys of Gozo offer a decided approximation to the antique Mediterranean model; and the inhabitants of this neighbouring island, which from being without harbours is very little visited, have retained more of their ancient

usages than the Maltese. I sometimes witnessed the transshipment of Alexandria wheat for distribution to surrounding ports; Egypt being, as in the time of the Romans, the granary of this portion of the Mediterranean. The antiquities of Malta, although consisting principally of fragments, are extremely interesting; especially on account of the intimate relations between this island and ancient Carthage. The variety is unusual, including Phœnician or it may be Carthaginian, early Greek, and Etruscan, Egyptian, Roman, Saracenic or Muslim-Arabic; and another class already alluded to, which may receive the provisional name of Mauritanian.

"On the 8th of December, I left Malta in the French steam-boat, and on the second day after we were close in with the rugged mountainous land of Greece. Although forewarned by an ancient writer, that 'Greece was always the child of poverty,' I did not anticipate the aspect of sterility. Among other undulations of surface offered to our view, was a valley, remarkable only for having existed in the reminiscences of three thousand years; a young Turk, who happened to be looking in that direction, pronounced its name, 'Sparda.' Astonishment may well be excited, that such a district should have brought Xerxes out of the depths of Asia. Even in modern times this further peninsula is said 'to have been never actually conquered; the Turks contenting themselves with requiring only some trifling tribute.' On the 11th we arrived at Syra, where, with other passengers, I was immediately transferred to the Alexandria steam-boat. I counted at Syra, no less than eleven vessels in the course of building; for the Greeks, as in former ages, still hold the navigation of the eastern division of the Mediterranean; their vessels being comparatively rare to the westward of Malta. The Greek costume is in many respects half oriental, like the position of the country; and, indeed, the people themselves, according to Eastern classification, are hardly ranked among Franks or Europeans.

"We obtained a distant view of Crete and of Mount Ida; and on the 14th we reached the low shores of Egypt. The first glance on landing at Alexandria sufficed to dispel all ideas of romance as connected with Oriental life. Excepting my slight introduction at Malta, I was now for the first time within the territorial domain of history; and passing the modern village, I looked around, expecting to see ruins. What had become of the great city of Alexander, for so many centuries the emporium of the world? The ground was only hilly and uneven; and a cultivator complained of its being 'stony,' meaning by the expression the fragments of pottery. Two objects, however, still mark the site of the ancient city; and towards one of them, on the following day, I directed my steps. The cabins of the South Seas were palaces in comparison with the low mud hovels on the way, and the whole neighbourhood was disgusting. On reaching the base of the obelisk my attention was principally engaged by the size and the bold sculpture of the characters, seemingly designed to transmit a record through ages of barbarism. The dimensions of the stone were sufficiently astonishing; and I next considered the intellectual attainments of the existing population. Turning to my Barabra guide, 'Ali,' said I, 'who do you think placed the stone here?' His reply, coming from an unexpected source, startled me; 'Pharoon.' Richly carved capitals and columns, some of marble, some of polished porphyry, and some of granite, had been here and there dug out of the ground, abundantly vindicating the splendour of the ancient

Grecian city; and I occasionally remarked a fragment which had proved too massive to be of use to modern Egyptian architects. My Barabra guide pointed out these various antique relics, referring them always to 'Sooltan Iskander,' and only in a single instance did I find him at fault—in that of the unmeaning Roman column which he persisted in attributing to Pharoön. On a subsequent occasion the accuracy of the popular tradition was most unexpected, for Ali declared that 'he did not know the builder of the Pyramids, who, however, was certainly not Pharoön.'

"On the 20th of December I started for Cairo in the steam-boat, by canal and river. Owing principally to the groves of date-palms planted around the villages, the character of the scenery is rather Indian than European. In ancient times the people of the Mediterranean knew of the tropics only by the valley of the Nile; which, notwithstanding its two foreign palms, affords but a very slight insight. At Cairo, I had the good fortune to meet with Mr. Bonomi, and I was thus at once initiated into the subject of the Egyptian antiquities. I visited the Pyramids, placed like a rock in the current of time: a spot where the mind is directed to the roll of empires. I witnessed the perfection of masonry in the workmanship around the entrance of the great Pyramid; and the fact also that the principle of the arch is carried out in a neighbouring coeval tomb. While at Saccara, the beauty of the sculptures in a tomb of the sixth dynasty seemed to justify Herodotus in his exalted commendation of the Labyrinth. Of human works, the most ancient not only promise to endure the longest, but they bear the impress of superior skill and of extreme purity of taste. And the decline of art in Egypt is clearly referable to the Pharaonic ages; to the accession of the eighteenth dynasty. A point of higher interest is the fact, that the earliest Egyptian monuments appear to have preceded the origin of idolatry; but this question, with many others relating to the same period, may probably be decided by the researches of Lepsius. At Thebes, once the mistress of the world, the remains are nearly all Pharaonic, and in a corrupted style of art; yet they present a greater variety of subjects of interest than the antiquities of Lower Egypt, or those of any other country. In the tombs of the Pharaohs such is the freshness of the unfinished paintings, that one can hardly avoid expecting the return of the artist to his task. The excavations are in a material which resembles lithographic stone, and which is admirably adapted for painting in a climate devoid of the elements of destruction. But it must not be supposed that Egypt is mainly indebted to this circumstance for the abundance of antiquities, since the climate of various other countries is equally favourable for the preservation of the works of human hands. Although I may appear singular, I confess being interested in the Egyptian colossi. These are by no means simple enlarged figures of men, a kind of work that does not require genius; but they have lines not strictly anatomical, which yet appeared peculiarly expressive of physical strength. Among the numerous colossi at Thebes, the largest excites astonishment, not merely from the size and the freshness of polish, but from having been subjected to a mechanical force capable of rending it. The mode of warfare described by Homer is abundantly illustrated on the walls of the Theban temples. Here are portraits of individuals, costumes of foreign nations, military campaigns in distant lands, and other evidence of great international events, most of them anterior to written history. In fearful pre-eminence among the records of carnage, the most recent of

the larger temples bears the battles of Sethosis. This Pharaoh preceded Alexander by about a thousand years, and a narration of his career is given by Manetho with much simplicity and dignity in the following words:—'Sethosis then made an expedition against Cyprus and Phœnicia, and besides, against the Assyrians and the Medes; and he subdued them all, some by his arms, some without fighting, and some by the terror of his great army; and, being elated with his success, he went onward the more confidently, and overthrew the cities and the kingdoms of the East.'

"While ascending the Nile, I remarked, among much individual variation, that the complexion sensibly increases in depth, until in the Thebaid the Malay-brown hue is not uncommon. This gradual change takes place in both Copt and Arab, and, to all appearance, is independent of mixture of physical race; although individuals might readily be selected who, in Europe and the United States, would not be recognized as Whites. With the exception of the Copts, the modern Egyptians all rank themselves as Arabs. I found, however, that the people living near the Pyramids, on the western margin of the valley, equally claimed Berber or Libyan descent. The circumstance seems to favour the suggestion of Hodgson, that the Libyan was once the spoken language of Egypt. The coincidences between Libyan and Sanscrit words are numerous; and the point might be worth ascertaining, how far a Mahratta from the Dekkan and a Kabyle from Mount Atlas, would be able to understand each other's language.

"I frequently met with Copts, a class of the population noted for having maintained their religion throughout the Muslim conquest, and for having preserved the sacred language of ancient Egypt. In the upper country, where the Copts have monasteries and villages, and where they cultivate the soil, the complexion is dark; and, in the absence of my interpreter, I should not have distinguished them from the rest of the peasantry. The Copts of Cairo and Alexandria have the fair European complexion, accompanied, frequently, with a Greek or an Italian cast of countenance, that suggested doubts as to their exclusive Oriental descent.

"Although Egypt at present may be regarded as politically independent, it is not the less governed by Turks; and these have appropriated most of the offices of honour and profit. In appearance and manners the Turks of Egypt are not very distinguishable by strangers; but they experience the same difficulty with Europeans in rearing their children in the climate of Egypt. The few Turks I saw in other parts of the Mediterranean, were more readily recognized from their wearing a distinctive dress. As a class, the Turks are manifestly less inclined than the Armenians to assimilate with Europeans.

"Muslim SYRIANS were said to be numerous at Cairo, although I was unable to distinguish them. I do not know whether Christian Syrians are in the habit of visiting this city; but I saw one of them at Malta, a person who had acquired eminence by his learning.

"Among the most interesting visitors at Cairo were a party of BEDOUINS from Petra, near Palestine, who had accompanied some travellers, and who were making their journey subserve the additional purpose of buying corn. They were six or eight in number, and from their lineaments it was evident that they belonged to one family. The hair was straight, and the features were those of the White race; but the depth of hue surprised me, as it fully equalled that of my Barabra servant, who

chanced to be standing near. They were warmly clothed, in which respect they differed from the southern Bedouins.

"I once met with three or four ARABS OF THE HEDJAZ, in the streets of Cairo, and I was struck with their peculiarly dignified deportment. Their complexion was not particularly dark, and the physical race could not be mistaken. At Suez, however, where this class of Arabs are frequent visitors, I observed signs of mixed descent; and in an instance already mentioned, a Negro was in company. In place of a turban, all wore a mantle striped with yellow, an article of dress, perhaps, general in the Hedjaz, but which I have occasionally seen in Southern Arabia, and among Arab visitors at Bombay and Zanzibar. At the last-named place, a man wearing it was pointed out to me as a 'Wahabi,' who had fought against the Pasha of Egypt; and I have elsewhere heard this mantle termed the badge of the Wahabi. At Muscat I saw it worn by Negroes, whose filed teeth designated an African birth-place.

c. Southern Arabs.

"On the 24th of March I left Suez in the English steam-boat, and on the 30th I landed at Aden, where I remained for three weeks, besides making two subsequent visits. Egress was here prohibited to the new comers; but the people of the country were often seen bringing upon camels articles of produce for the supply of the market. A body of these Arabs, hired by the English authorities, were at work on the road, and a few had become permanent residents. In some individuals the complexion was yet darker than I had seen it among the fellahs of the Thebaid; while in other respects the affinity with the White race was hardly distinguishable. I remarked nothing peculiar in the costume, except on one occasion, in the instance of three Arabs wearing caps, which were not padded like those of the Banians, but which equally resembled in outline the common monumental pattern of Egypt.

"On the 22d of April I left Aden in the brig Cherokee, Captain Mansfield, of Salem; and we arrived at Mocha on the following day. A boat soon came off to the anchorage, bringing the interpreter, who, with three other persons employed in the intercourse with American vessels, were the only natives of the place who could speak a European language. The interpreter stated that 'Mocha had now a good governor, and that all was right;' and he proceeded to descant, with great simplicity, upon the manifold advantages of good government. On landing, we visited the governor, who was called a Bedouin, but who resembled, in personal appearance, the other principal Arabs of the place. These seemed to be a superior set of men to the Muslims of Cairo. Many of them were tall and of large stature; and although their physical race would anywhere be recognised, I thought I could distinguish a local cast of countenance, independent of the unusual shortness and scantiness of beard. Indeed, the only long beards I saw among the native population of Mocha were those of the Jews. The common Arabs of the town varied more than the upper classes from the usual aspect of the White race. Their average stature was decidedly inferior; the beard was yet more scanty, and instances occurred of its entire absence, in combination, too, with the deep Malay-brown complexion. Polygamy seemed hardly to exist among the mass of the population, notwithstanding the frequency of unfruitful marriages; neither did I hear of any undue facility

of divorce. I remarked many other points of difference from the Egyptian Arabs: as in the costume (the head-dress usually consisting of a blue turban more or less covering the ears); in the eating of camel-meat; and especially in the universal diffusion of education. The country immediately behind Mocha is level, and, on a general view, appears to be utterly desert. Here and there, however, I met with small patches of cultivated soil that are irrigated from wells, a discouraging task in such a burning climate. On inquiring as to the safety of travelling, I was told that 'it would be better not to go far from town, for, being a stranger, if I should happen to be robbed, I should be unable to tell by whom.' I asked my informant if he would be willing to make the journey by land to Aden? 'Nothing would induce him to go among people with whom he was unacquainted.' I then asked whether the people of Mocha would fight for their governor? This question elicited surprise, and he rejoined, — 'Why should we fight for the governor, who only taxes us?' In addition to the slight tattooing usual with Arab women, I observed, at Mocha, ornamental markings with a black pigment; but these occurred more especially upon children. Similar markings with pigment, rather than true tattooing, have appeared to me to be represented on the Pharaonic monuments, on the bodies of certain foreigners. A cane which I obtained at Suez, having the oblique monumental handle, was recognised as being made after the pattern of Western Arabia; while the fashion of the rounded hook was referred to the cane of Muscat."—See ethnographical section of article ARABIA.

"The few BEDOUINS pointed out to me were hardly distinguishable from the lower class of town Arabs, except by the absence of a turban. They were all young men, having uniformly the Malay-brown complexion, and the hair curling in ringlets all over the head. A powerful tribe of Bedouins, who sometimes rob and kill people, even within a few hours of Mocha, interrupted the land-route to Aden. Couriers, however, are occasionally dispatched, and we transmitted letters by one of them. 'About eleven years prior to our visit, Mocha was seized by the Turks, (as the Egyptian forces were here called,) who left a garrison of some five hundred men.' This state of things afforded a pretext to the Bedouins of the vicinity to pillage the place. 'Assembling to the number of some thousands, they approached the town, regardless of the artillery, and scaled the walls with ladders. They afterwards robbed every house, and left the inhabitants almost literally naked.' Mocha, since that event, has been ruled by a Bedouin. Among other results of the affair, it was found that Egyptian money, which had been in use during the short accession of Turkish power, gave place to the former currency. I sometimes heard references to the palmy days when 'Mocha belonged to the king of Sanaa'; when her staple was more in demand, and especially when it was paid for in dollars. The recent death of the last-named potentate had added to the usual disturbances of the country, and a battle was daily anticipated, in consequence of the revolt of some of the villages belonging to his soldiers.'

"Bedouins are often seen at Zanzibar—a circumstance the more unexpected, as I had ascertained that they do not visit Singapore. Besides the individual adventurers at Zanzibar, the Imaum sometimes imports bodies of Bedouins, to serve as soldiers in his military campaigns. On the 3d of October I left Zanzibar in the barque, Wm. Schroeder, Captain Jackson of Salem; and, after making an unsuccessful attempt to land at Mombas, we arrived

on the 18th at Muscat. The people of this part of Arabia, like those of the Hedjaz, have long beards, and they may be recognised by the checkered and banded turban, which I first saw at Zanzibar. Some individuals were found to be more polished and liberal-minded than any other Arabs I have met with; and a more advanced tone of society pervaded their principal town. The name of Ishmael was well known at Muscat; and two classes of Arabs were recognised 'who are fighting to this day.' The Kahtan Arabs ruled formerly for a century and a half; and they are many of them a fine-looking set of men, having, unlike the Abyssinians, regular hair. They are all Muslims, and are not rare in the interior, but there were none of them residing in Muscat. The Imaum's family came from the town of Adam in Uzjd, and belonged to the other class of Arabs, the Hamcer, as did, likewise, most of the people of Muscat, and many of the Bedouins. Inscriptions on the rocks are unknown in Eastern Arabia.' The Bedouins visiting Muscat differed in personal appearance from those seen at Mocha; and they were more readily recognised as belonging to the White race. Their complexion, however, in most instances seemed to be yet darker than in the Mongolian race. Their long hair was much undulated; and they usually wore a fillet around the head, such as is seen on the Pharaonic monuments in representations of captive monarchs. One of the Bedouins, who bore no outward marks of distinction, was pointed out to me as being chief 'over a thousand men; all to get angry whenever he is angry and at no expense.' I was informed that no one came to Muscat from a greater distance inland than two or three hundred miles, and that the great interior of Arabia is unknown even to the Bedouins, who, however, suppose it to be inhabited. Persons sometimes go by land to Mecca, keeping near the Persian Gulf; but this is not often done, the route being considered dangerous from the scarcity of water; and the usual course is by sea to Bahrein, and thence through the Interior. The communication along the outer coast of Arabia is carried on altogether by sea."—See article *BEDOUINS*.

d. *Indian Muslims.*

"I have spoken in another chapter of the Indian Muslims who were seen at Singapore, and who came chiefly from Eastern Hindostan. Those met with on my second Voyage belong to the North and West; and, for the most part, unequivocally to the White race. As the pilgrim vessels usually touch at Mocha, numbers of Indian Muslims are to be met with in that city; where I soon learned to distinguish them by the straightness of the beard; a point in which they differ from Europeans, and which is expressed in certain Greek and Roman representations of Orientals. Some of these Indian Muslims dealt in precious stones, while others had become residents, and had opened shops. A Bombay ship at the anchorage, was laden principally with Surat cloth; and had on board about forty merchants, each of them, as in the Chinese junks, having the charge of his own wares.

"The larger edifices at Mocha are built in much the same style as those of Cairo, except that there is greater refinement of architectural ornament. This was traced to the workmen of India: and I soon perceived, that the Arabs here, as everywhere, are a rude people; and that all the arts requiring skill and ingenuity, belong properly to Hindostan. On proposing to have an umbrella covered, I was told that this 'could not be done; because the people of Mocha are not India people.'

"I met with a class of individuals called *Parsians*, who are noted as the fairest Orientals that come to Mocha; and who appear to me to have close affinity with the Indian Muslims. One of them accosted me in English, and among other matters, stated that 'he was from Iraun, and that the English and his countrymen were friends;' although a person of much intelligence, he had never before heard of America, and he was evidently at a loss to comprehend where it could be situated. I met with another of these Persians, immediately after he had performed a surgical operation; and, to my surprise, he described the 'couching of the cataract;' but I did not undo the bandages to verify his account. At Bombay, and throughout my journey in the interior of India, I found myself always at a distance from the seat of arts above alluded to; and my inquiries now placed it to the northward, and in the direction of the Indus. Other attendant circumstances, taken in connexion with the geographical position of the Upper Indus, seem to point yet further east. Bombay appears to be the head-quarters of the Indian Muslims, and I remarked among them various evidence of Persian descent, as in the custom of child marriages. Polygamy is rare, even among the wealthy; but their religion has been much corrupted; 'they have saints, and they address prayers to Mohammed, and even to Ali.' I was informed, however, that four castes of Muslims are recognised at Bombay, who all eat together, but who will not intermarry. It has been sometimes asserted that the boatmen of the western coast of Hindostan are all Muslims. Exceptions, however, must be made in regard to Cutch; and a Rajpoot sailor was serving in the Bombay ship at Mocha under a Muslim commander. Indian Muslims are likewise common at Zanzibar, and it was said of them, that 'after getting married and mixed up a little, they wanted to pass for Arabs.' Most of the White women I saw at Zanzibar belonged to the class of Indian Muslims.

"Two or three *Belooches* were pointed out to me at Zanzibar, and others again at Bombay. They seemed to have affinity with the Indian Muslims, rather than with the Sindians and Bedouins; but I am hardly prepared to decide from these few examples. *Belooche* women have been sometimes imported for the harems of Zanzibar."—See article *BELUCHISTAN*.

e. *Western Hindoos.*

"In the various ports of Arabia and Eastern Africa, individuals may occasionally be met with, who differ remarkably in their bearing and costume from the surrounding population. An equal difference will be found in the qualities of the mind, in a surprising amount of intelligence and general information. These people have influence, not, however, derived from battles; their empire is not of the sword; neither is it based on their religion. They are the idolatrous merchants of India, who, for ages, have mainly held the commerce of the above-named countries.

"My acquaintance with the *Cutch Baniyas* commenced at Aden: and at first I mistook them for Parsees, whom they resemble in many striking particulars; as in their names, in their general style of dress, and in their shaving the beard with the exception of the mustache (a circumstance possibly connected with the prevalence of the same fashion at Cairo), but on further acquaintance, I was soon able to distinguish a peculiar style of countenance. The Baniyas visiting Mocha and the neighbouring parts of Arabia, belong to a different

caste from those usually seen at Zanzibar, Muscat and Bombay. They may be distinguished by the more flattened turban; the shape of which, as is shown by Niebuhr's figure, has not changed for the last eighty years. At Zanzibar I was more particularly struck with the analogy to the ancient Egyptian priests; for in like manner the Banians seemed to be the depositaries of knowledge and of the relics of civilisation in the midst of barbarians. Herodotus says, 'that the Egyptians venerate the cow;' and this is a fundamental principle of the Hindoo religion. Also, in minor particulars, the undress Banian cap entirely resembles the pattern most frequently represented on the Egyptian monuments. One of the principal Banians at Zanzibar spoke English, and he repeatedly complained to me of the 'hard life required in being a Banian. There are eighty-four castes of Banians;' but, said he, 'God made all men free. The Banians who go to sea do not associate with those who remain in India; and the same rule prevails among the Lascars, who are at Sudras, and are allowed to eat fish.

"The mass of the population of Bombay is composed of Hindoos who, by way of territorial distinction, are usually termed MAHRATTAS. From my first view of them I could only regard them as Arabs; as the unconverted idolatrous Arabs, such as we are familiar with in the history of the Mediterranean countries; and I soon perceived that it was possible at the present day, to obtain an insight into the influence on the mind of the ancient system of image-worship. I perceived also that in various points of difference from the modern Arabs, the Mahrattas accord with the ancient Egyptians. Thus polygamy is rare; the women do not conceal the face; the men carry burdens (with the balance-beam) on the shoulders; and the drinking-cups and water-jars are universally made either of copper or brass. Other customs witnessed have not yet become obsolete in Egypt; as that of the women carrying burdens on the head, and their collecting manure (for fuel) with the hands. It is true, the analogy in surrounding circumstances (periodic rains compensating in reservoirs for the inundations of the Nile) tends doubtless to assimilate the population; yet with every allowance, the Mahrattas appeared to me to be more than a counterpart to the Egyptians of Herodotus. The fact, too, should be noted, that the Sanscrit language, which has been inherited by the Mahrattas, is regarded by writers as originally foreign to India. In former times the nations of India were principally four, corresponding with the four languages—the Mahratta, Telugu, Canara, and Tamul. The Mahrattas have retained the Sanscrit alphabet, but they possess very little literature of their own, and the Tamul language is the only one of the four that is rich in literary treasure."—See article MAHRATTA TERRITORY.

f. Irregular Castes of India.

"In India the term 'caste' is not restricted to the followers of the Braminical religion, but it is used in a general sense, and Parsees, Muslims, Jews, and Europeans are commonly spoken of as so many castes. The population is heterogeneous, made up of the remnants or wrecks of a variety of nations, some of which are perhaps extinct at their place of origin; for it would seem that amid 'the violence with which the earth has been filled,' toleration has existed only in India.

"The MAHARS are commonly supposed to be the original inhabitants of the Dekkan. Three or four of them were pointed out to me at Ahmednuggur, but in costume and personal appearance they did not pre-

sent any marked difference from the surrounding population. They may have been a little darker, and one individual who accompanied me to Adjunta and back, seemed to be as dark as a Telingian.

"I met with a party of BHILLS on the road, near the limit of my excursion. They presented very distinctly the lineaments of the white race, but I did not remark any thing peculiar in their dress or personal appearance.

"The BRINJARRY were principally met with on first entering the Dekkan, their immense herds of bullocks sometimes occupying the road for nearly a mile. At regular intervals, a woman in the midst was spinning or sewing as she walked along, and one was carrying a dog, an act which, according to my interpreter, 'neither Hindoos nor Parsees would do.' The dress more resembled the European female costume than the Hindoo, but the Brinjarry women had large anklets of fantastic pattern, with other brass ornaments. The men carried spears having the broad blades covered with leathern sheaths. In parties returning towards the interior, the bullocks were all heavily laden with merchandise. Except in the masculine forms of the women, I could find no physical difference from the general population of the country. The lineaments of the white race were readily distinguishable, except in an individual already noticed as resembling an Australian. The herds were spoken of as the property of the women, who, indeed, had the air of being the heads of the community; but whether the system of polyandry prevails, as among certain classes in the south of India, I did not ascertain.

"The DUNGUR were encamped near every village of importance, in small huts formed of rush-mats. I have seen these huts not only hemispherical in shape, but disposed in a circle, with their entrances towards the centre, thus presenting an unexpected resemblance to the 'kraals' of Africa. The Dungur have drays of a very rude and primitive construction, formed of three cross timbers resting on an axle, the wheels being merely sections of the trunk of a tree.

"The SIKLIGUR have similar wandering habits, but they hold themselves aloof; they are less numerous, and are said to exercise the profession of 'chatty-makers,' or tin-men. I fell in with one of their encampments, which consisted of low woollen tents. This, I think, is the class of people to which the origin of the Gipsies has been sometimes referred.

"Some of the numerous irregular castes of India are supposed to be the remains of the aboriginal population. I did not meet with any direct evidence of this, but I am inclined to think there may be something in the point of view. Some parallelism in social condition seems wanting in the white race, and the required connection may possibly be traced in the hill-people of Nepal, the Karens of Birmah, and even tribes situated further to the south-east.

XII. ASSOCIATION.—NUMERICAL PROPORTIONS.

In order to complete the foregoing account, Mr. Pickering furnishes a specification of the several races occurring at each place visited, or, in other words, an analysis of the population.

"In the United States, three races are familiarly known—the White, the Negro, and the Mongolian, the latter represented both by the aboriginal population and by a few Chinese settled in our principal cities. A fourth race, the Malayan (represented chiefly by Polynesians), is not uncommon in the ports frequented by whale-ships; and, in some few

instances, I have met with a fifth race, the Telingan, or true Indian.

"At Madeira I met with two races—the White and the Negro; but the latter race occurred in only a few instances, and exclusively at the principal sea-port town.

"At the Cape Verde Islands I met with the same two races, but they occurred in inverse proportions, and the White race was here comparatively rare.

"At Rio Janeiro and the vicinity, I fell in with only the same two races—the White and the Negro, and they appeared to be here in nearly equal proportions.

"The same two races were again seen at the mouth of the Rio Negro, in North Patagonia; but a third race—the Mongolian or the aboriginal—was said to be present among the population of the neighbouring village.

"In Terra del Fuego there occurred but a single race—the Mongolian, or the aboriginal. I have never heard of runaway sailors resorting to the southern side of the straits of Magellan.

"In Northern Chili, at Valparaiso and Santiago, I met with the three races last mentioned—the White, the Mongolian or the aboriginal, and the Negro, but the latter race was decidedly rare.

"In Peru, at Lima and in the vicinity, I met with the same three races, here, however, interspersed in more equal proportions; and a variety of complicated mixtures had sprung up, which were distinguished by different names. On the Andes the aboriginal race was found to preponderate, and the Negro was rare.

"At San Francisco, in North California, I met with three races—the Malayan—which is the aboriginal, and is also represented by the Polynesian crews of trading vessels—the White race, and, in a single instance, the Negro.

"Three races also occurred in Oregon—the Mongolian, here the aboriginal, and far predominating at the time of our visit; the White race, consisting principally of the missionaries, and of persons connected with the Hudson's Bay Company; and the Malayan, represented by a few Polynesians. A Negro, I believe, effected his escape from one of the vessels of the expedition, and, in this manner, a fourth race was added to the foregoing.

"Leaving now the shores of America, at the Hawaiian Islands, I met with five races—the Malayan, here the aboriginal; the White; the Negro; the Mongolian—represented by several imported Chinese—and the fifth race, by an individual from Hindostan.

"A single race occurred among the eastern Paumotu—the Malayan, or the aboriginal. In the western part of the same coral archipelago we received on board a shipwrecked European.

"At Tahiti, notwithstanding it is so much frequented by trading vessels, I observed but two races—the Malayan, or the aboriginal, and the White race. The same two races occurred at the Samoan, or Navigator islands, where the resident Whites consisted of the missionaries and of numerous deserters from trading vessels.

"The island of Tongataboo was the first place visited where two races had been brought in contact without European intervention; these were, the Malayan, or the aboriginal, and the Papuan from the Feejee islands. Three additional races had arrived in trading vessels—the White, the Negro—represented by a single resident—and the Negrillo, by a lad from Aramanga.

"At the Feejee Islands the Papuan and the Malayan races had again aboriginally met together, but Polynesians had likewise been introduced by

trading vessels, as had the resident Whites, and a native of Hindostan, making in all, four races.

"At the Bay of Islands, in New Zealand, I met with but two races—the Malayan, or the aboriginal, and the White, the latter already settled in considerable numbers, before obtaining a cession of the sovereignty of the group.

"At Sydney, and in the vicinity, I met with five races—the Australian, or the aboriginal; the White, far preponderating; the Negro, in a few instances; the Malayan, represented by Polynesians, chiefly from New Zealand; and the Telingan, by some natives of Hindostan.

"In Luzon there occurred five races, two of them aboriginal, the Malayan and the Negrillo. The Mongolian race was represented by numerous Chinese residents; the Telingan, by a few Lascars from the shipping; and the White race by Europeans, and persons of European descent.

"At Caldera, on Mindanao, I met with but two races—the Malayan and the White; the latter represented by the commander of the post, and possibly, also, by some traces among the Muslim population.

"At Sooloo I met with four races—the Malayan; the Negrillo, in an individual, perhaps aboriginal; the Mongolian, represented by a single resident Chinese; and the Telingan, by two captive Lascars. There was, besides, evidence of some mixture of a fifth race, in the persons of the chiefs and the Muslim priest.

"At Singapore, individuals belonging to no less than eight physical races were found to be congregated together. The White race was represented by Europeans and by numerous Orientals; the Mongolian by Chinese; the Malayan, by the native population of the East Indies; the Telingan, by adventurers from Hindostan; the Negrillo, by slaves from New Guinea; the Negro, too, was present, in a few instances, as was likewise the true Abyssinian, and, in all probability, the Ethiopian, in some of the mixed Arabs. Indeed, as we had brought with us the Papuan, in the person of Veindovi, the Australian and the Hottentot were the only races remaining unrepresented at Singapore. The existence of such a spot on the globe is a fact deserving attention, especially when it is considered that this gathering is chiefly independent of European shipping, and of the modern town of Singapore; the same causes, and the same modes of conveyance, having for many centuries directed emigration from various quarters to the Straits of Malacca.

"At the Cape of Good Hope the Hottentot race is the aboriginal; but I did not meet with individuals who were unmixed. The four additional races introduced through European intercourse have also become much intermixed. At Cape Town the Negro appeared rather to preponderate in numbers over the White race, while the Malayan and the Telingan were comparatively rare.

"At St. Helena, in a population of only a few hundreds, introduced in European shipping, I observed no less than four races: the White; the Negro; the Mongolian, represented by a Chinese; and, to all appearance, the Telingan was present, in the descendants of individuals derived from Madagascar.

"At Zanzibar, on the east coast of Africa, I met with six races: the Negro, here preponderating; the White, derived either directly or originally from Arabia, Persia, and Western Hindostan; the Malayan, represented by three or four Ambolambo from Madagascar; the Mongolian, by one resident Chinese; the true Abyssinian, observed in a single instance; and the Ethiopian, which, during the monsoon then prevailing, was somewhat rare.

"At Bombay I observed five races: the White; the Telingan, rare in a state of purity; the Negro, chiefly among the crews of Arab vessels arriving from Zanzibar; the Mongolian, represented by a few Chinese residents; and the Ethiopian, which, in a single instance, was seen unmixed.

"At Muscat I met with four races: the White, represented exclusively by Orientals; the Telingan, apparently present in two individuals from the shores of the Persian Gulf; the Negro, chiefly derived through Zanzibar; and the Ethiopian, seen in individuals of mixed race, and in a single Somali.

"The same four races occurred at Aden. The Ethiopian, however, was here represented by numerous Somali visitors; and the Telingan, by individuals among the Sepoy regiments.

"At Mocha I fell in with five races: the White; the Mongolian, represented in a half-breed Chinese; the Abyssinian, seen in several instances; the Ethiopian, which is here numerous; as is, likewise, the Negro race.

"In Egypt I met with but three races—the same known there from remote antiquity: the Ethiopian, the Negro, and the White. I learned, however, that individuals belonging to a fourth race, the true Abyssinian, are sometimes seen at Cairo.

"I observed two races at Malta: the White race; and, in the instance of two lads, who were probably derived from the neighbouring Muslim countries, the Negro.

"On the continent of Europe I met with the same two races; but with the Negro only at Marseilles, and in the instance of two or three resident individuals. Of isolated districts, Africa appears to contain the greatest number of aboriginal races; and, next in order, will probably follow either Madagascar or New Guinea.

"Density of population being independent of territorial extent, the races, when compared by the number of individuals, rank differently from the appearance of things on the map. The usual estimates of the population of the globe vary from eight hundred to a thousand millions; and, taking the mean, the human family would seem to be distributed among the races in something like the following proportions:—

The White, . . . 350,000,000	The Abyssinian, . . . 3,000,000
The Mongolian, . . . 300,000,000	The Papuan, . . . 3,000,000
The Malayan, . . . 120,000,000	The Negrito, . . . 3,000,000
The Telingan, . . . 60,000,000	The Australian, . . . 500,000
The Negro, . . . 55,000,000	The Hottentot, . . . 500,000
The Ethiopian, . . . 5,000,000	

XIII.—RELATIONS BETWEEN THE RACES.

"Although languages indicate national affiliation, their actual distribution is, to a certain extent, independent of physical race. Confusion has sometimes arisen from not giving due attention to this circumstance; and, indeed, the extension or the imparting of languages is a subject which has received very little attention. Writers sometimes reason as if nations went about in masses, the strong overcoming the weak, and imposing at once their customs, religion, and languages on the vanquished. But a careful examination of the present being regarded as the best guide to the history of the past, the following examples, selected from among others which I have noted, may be found deserving of attention:—

"In the mining towns of the Peruvian Andes, the Spanish language is not commonly spoken; but Spaniards and other foreigners learn the Quechua, or the native Peruvian.

"In Luzon, though a 'conquered country' for more than two centuries, the Tagala is still the

general language, and the Spanish makes no progress in the interior towns and districts.

"At Singapore, where the native population is lost amid the influx of foreigners, the current language is, nevertheless, the proper Malay.

"Were foreign intercourse cut off from the Hawaiian Islands, I think I shall be supported in the opinion that, notwithstanding the large number of resident Whites, the English language would soon become obsolete.

"The English language makes no progress in Hindostan, neither do the Roman letters; and among the native population, newspapers are printed in five or six different alphabets, and a yet greater variety of languages.

"The language most likely to prevail at Aden, in case the English establishment becomes permanent, is the Hindoostanee.

"On the East Coast of Africa, notwithstanding the large number of resident Arabs, the general medium of communication is the Soahili, a Negro language.

"In Malta, a Catholic and European island, Arabic is alone spoken by the mass of the population; moreover, it is not here a written language.

"The adoption of a language seems to be very much a matter of convenience, depending often on the numerical majority. A stranger learns the language of the community in which he may happen to fix his abode; and his children often know no other. On the supposition, then, that POLYNESIANS in former times may have reached the shores of America, it does not necessarily follow that we ought to meet with traces of their language. Some combined association of individuals, some clannism, seems requisite to the preservation of a language in the midst of a foreign nation.—Thus it may be inferred, that the HEBREWS retained their language during their sojourn in Egypt, while in their present dispersed condition they speak the languages of their several adopted countries, to the very common neglect of their own.—The GYPSIES, who are almost as widely, though less individually dispersed, retain everywhere something of their original language.—But a more remarkable instance is found in the YUCHI, a tribe 'long incorporated in the Creek Nation; their peculiar language abounding in low, difficult, guttural sounds, so that with the exception of a few words, no one but the children of the Yuchi has ever been able to acquire it.'

"The following are instances of more complicated relations:—A foreigner might naturally suppose, that he could learn, in the United States, something of African languages and customs; but he might traverse the country without hearing a word of any Negro language, a single generation being sufficient to efface all knowledge of Africa.—Hayti would furnish him a more perplexing case; and perhaps nothing short of written history could solve the enigma of French being the language of that island.—Moreover, his search for African institutions would not be more successful among the St. Vincent CARIBS.—And thus we have three examples where one physical race of men has succeeded to the language and institutions of another.

"Turning now to the Pacific and East India Islands, we find languages of the Malay class spoken by three distinct physical races; and all analogy indicating that this type of language belonged originally to a single race, the particular source becomes a fair subject of inquiry. In determining this point, aid may be obtained from the geographical distribution of the three island races; from the well-known composition of the population of the East Indies, where the Malayan is an invading

race, intruding and encroaching on the territories of the Negrillo; and from the fact, that the Negro race uses the same type of language at the Comoro Islands and Madagascar; while at the last-named island, the physical race of the Vazimba remains undetermined.

"The relations between the three island races are further illustrated by the state of the diffusion of knowledge in the Pacific, where almost every Polynesian art can be distinctly traced to the Feejee Islands. Agriculture and civilisation are very commonly regarded as inseparable; but the Feejeeans, notwithstanding their ferocious and barbarous manners, are found to possess a high degree of skill in cultivating the soil. A little further west, at Vanikoro, the trunk of a tree, rudely fashioned, is simply grooved to afford foothold, while an outrigger is attached, and a mat is spread for a sail. In our part of the globe, few would be willing, thus on a simple log, to launch out into an unknown ocean. The pattern, however, seems to shadow forth the Feejee canoe; and it by no means follows, that the race which elicited the spark of civilisation should have most profited by the advantage.

"The inventions of the Negrillo, a race so averse to, and almost refusing voluntary intercourse with strangers, were not likely to benefit the rest of mankind. If acquired, elaborated, and improved by the Feejeeans, still, from the social condition of this people, their dislike of change, and unwillingness to leave home, the knowledge might not have extended further. A third race is called into requisition, one of a roving disposition, the proper children of the sea; who, naturally the most amiable of mankind, are free from antipathies of race, are fond of novelty, inclined rather to follow than to lead; and who, in every respect, seem qualified to become a medium of communication between the different branches of the human family. Such an office is even indicated in the geographical distribution; for the Malayan alone makes a near approach to universal contact with the other races.

"While admitting the general truth, that mankind are essentially alike, no one doubts the existence of character, distinguishing not only individuals, but communities and nations. I am persuaded that there is, besides, a character of race. It would not be difficult to select epithets, such as 'ambitious, enduring, insidious;' or to point out, as accomplished by one race of men, that which seemed beyond the powers of another. Each race possessing its peculiar points of excellence, and at the same time counterbalancing defects, it may be, that union was required to attain the full measure of civilisation.

"In the organic world, each new field requires a new creation; each change in circumstances going beyond the constitution of a plant or animal, is met by a new adaptation, until the universe is full; while among the immense variety of created beings, two kinds are hardly found fulfilling the same precise purpose. Some analogy may possibly exist in the human family; and it may even be questioned whether any one of the races existing singly would, up to the present day, have extended itself over the whole surface of the globe."

XIV.—GEOGRAPHICAL PROGRESS OF KNOWLEDGE.

"Leaving now the physical diversity of the human family, and recurring to the order of the voyage of the Expedition: in proceeding always west, the American tribes first engaged our attention, and next the widely scattered Polynesians. Among the

latter people it soon became evident that their customs, arts, and attainments, were not of independent growth. And further, that the supposition of the Polynesians being the descendants—the scattered remnants of a highly civilised people now relapsed into barbarism, did not altogether meet the case. The East Indies being regarded by general consent as the place of origin of the Polynesians, it was natural to seek there for some corresponding tribe, for something analogous to the relation among European nations, of England to the United States. But on the contrary, surprise arose at the want of resemblance, and the term 'Malay origin,' if used in a national sense, was discovered to be incorrect. So, in looking to Asia, to China, Japan, or the neighbouring countries, for some tribe corresponding with the aboriginal Americans, we shall equally find ourselves at fault. For the remote environs of Behring's Straits do not offer a fair exception. After being much perplexed for an explanation, it was only on taking leave of the East Indies that the following simple reflection occurred to me:—If the human family has had a central origin, and has gradually and regularly diffused itself, followed by the principal inventions and discoveries, the history of man would then be inscribed on the globe itself; and each new revolution obliterating more or less of the preceding, his primitive condition should be found in the furthest remove from the geographic centre: as, in the case of a pebble dropped into the water, the earliest wave keeps most distant from the point of origin.

"If then we could go back into the early history of the East Indies, we might find there a condition of society approximating to that of the Polynesian Islands. And we can readily understand how customs may continue in remote situations, after having become obsolete at the place where they originated.

"They who send ships over every sea, and who live where inventions from different sources become common property at once, may not readily appreciate the state of things in the absence of such universal intercourse. But on the other side of the globe, in the vast space between Arabia and the coast of America, traces of successive waves in society seem actually to exist.

a. The East Indies.

"Thus in the East Indies, in the north-eastern or the heathen part of Celebes, we observe many striking coincidences with the state of society among the ancient Greeks. We have the spear, the shield, and the sword; and these weapons are even almost identical in pattern. Altars and sacrifices, so generally obsolete at the present day, are here extant. Auguries continue to be drawn from the entrails of offered victims, and also from the flight of birds. A separate literature has become an object of national pride, while the proa of the surrounding seas approaches in many respects the ancient row-galley of the Mediterranean. A further analogy may even be found in the custom of putting to death strangers arriving by sea, which, it appears, was not unknown among the ancient Greeks. A little to the west of Celebes, the literature of the Malay nation contains a translation of the Fables of Æsop; who, according to the unsatisfactory accounts we have of him, was one of the earliest of the Greek writers. And further, the fact may be noted, that the Æsopian style of composition is still in vogue at Madagascar. Superstitions also appear to be subject to the same laws of progression with communicated knowledge; and the belief in ghosts, evil spirits, and sorcery, current among the ruder East

Indian tribes, in Madagascar, and in a great part of Africa, seems to indicate that such ideas may have elsewhere preceded a regular form of mythology. In the East, Luzon is one of the most distant points reached by the invention of letters, or having an aboriginal alphabet. I was, therefore, much struck with some coincidences in the forms of the letters, between the obsolete Tagala alphabet and the ancient Geez of Abyssinia; while in the intervening countries the alphabets, although various, are altogether unlike. It is true the connexion is not entirely obliterated, but may be traced in the mode of marking the termination of words among the Bugis and the Siamese.

"The multiplicity of alphabets in the East Indies seems to offer a parallel to the multiplicity of languages in America; and I have found nothing, in all this, contravening the idea of a single source to the invention. Many of the East India alphabets are plainly derived one from another, the form of the characters often being merely modified and new ones superadded; but I shall assume only that the knowledge of the existence of the art was derived from abroad. Much of the difference, between alphabetic writing in the East Indies and our own more perfect system, seems attributable to the circumstance, that the alphabet transmitted to the West by Cadmus had been already elaborated.

"Let the reader, in thought, divest himself of his education, and suppose that his mother tongue had never been reduced to writing; and, further, that the possibility of representing sounds by signs had simply arisen in his mind. The attempt to carry this idea into practice will be found by no means so easy as it may at first appear; and, by most persons, would probably be abandoned. With the aid of example, there would be a greater prospect of success; but even, with several characters communicated, their forms would probably be modified, and new letters invented, for sounds difficult to be reconciled, or that might be unrepresented. Where the model has been imperfect, it has appeared to me that the system founded upon it would naturally be complicated; one requiring long study, and which might serve for a profession, a means of procuring support; in short, more resembling the inconvenient alphabets of the East India islands, than the simple analysis of sounds which we have in the Roman letters.

b. *The Feejee Islands.*

"Eastward from Celebes, and nearly equidistant with Madagascar, we have the Feejee Islands, situated entirely beyond the direct influence of the East Indies. We find, nevertheless, a regular system of mythology; oracles; the javelin, or throwing-spear; the patera, or shallow drinking-bowl; the 'pipe of Pan;' and the 'alabastron,' with the practice of anointing. We have likewise the wooden neck-pillow, and the practice of circumcision, both common to the ancient inhabitants of the Thebaid, and also to the modern Abyssinians and their neighbours on the south. We have, further, the legend of an enormous bird, the 'Rok' of the Arabian Tales; and a similar story is said to be likewise current in Madagascar and in the neighbouring parts of Africa. Among the subjects which promise to throw light on the affiliation of nations, none more deserves attention than the calendar and state of astronomical knowledge. These points have been much neglected in the accounts of the East Indian and Pacific islands. The Feejeeans have a regular calendar; and, I may add, that Veindovi kept a strict account

of the number of the moons, during the whole time he was on board the Vincennes.

c. *Polynesian.*

"The Polynesians, notwithstanding their more eastern geographical position, have most of their customs, arts, and acquired knowledge, in common with the Feejeeans; but there are certain points which require a separate notice. The eagerness with which whole communities, young and old, devoted themselves to reading and writing, when these arts were introduced, and the care previously taken to preserve and transmit poetry and history by means of living records, are facts of interest, under more than one point of view. Whoever has witnessed something of this, will hardly be willing to admit that such a people would ever have lost the art of writing. It should seem, then, as has been remarked by others, that the Polynesians belong to a wave of migration that preceded the invention of letters. Corresponding results may be deduced: from the ignorance of money, or of a medium of exchange; although property is acknowledged, inherited, and guarded by regular laws, even to a division of the soil. And again, from the absence of all kinds of 'grain;' notwithstanding the advanced state of the art of cultivation. The strict adherence to truth among portions of the Polynesian family, stands opposed to the treachery of the Feejeeans; and further, it seems to result mainly from the simplicity of the Polynesian character, the contrary practice being looked upon rather in the light of an error of judgment. The pseudo-accomplishment, however, proved to be not unknown to the chiefs. Other traits in the moral man might be adduced; for the 'golden age,' in accordance almost literally with the ideas of the ancient poets, still exists on some of the secluded Polynesian isles.

d. *America.*

"I hardly know whether to refer here to America; though in general the aboriginal Americans are to be regarded as in a less advanced state of society than the Polynesians. We note throughout Aboriginal America the entire absence of poetry and literature. Records, indeed, of a certain description were preserved by the Mexicans; but among the tribes of the United States, the tradition of remarkable events is said to disappear in very few generations. We note also in extensive and varied districts, a complete ignorance of agriculture; and where it is otherwise there is usually no division of the soil. A further difference from the islanders is found in the absence, in most instances, of hereditary governments. The custom of scalping, so well known in North America, may be noticed in this place, on account of its having been described by Herodotus; while it is not, that I am aware of, in vogue among any Asiatic tribe of the present day."

The 'zoological deductions' of Mr. Pickering are thus summed up by him. "Man does not belong to the cold and variable climates; his original birth-place has been in a region of perpetual summer, where the unprotected skin bears without suffering the slight fluctuations of temperature; and there has been a time when the human family had not strayed beyond these geographical limits.

"According to another principle, established by the observations of naturalists, species are found to have a certain geographical range; and notwithstanding a few instances of wide diffusion, Nature

has not reproduced a species in different quarters of the globe.

"Oriental tradition, in placing the origin of mankind in Ceylon, reconciles in many respects the requirements of zoology. But there are certain coincidences which point in a different direction. Of all parts of the globe, save only the very poles, the equatorial countries continue the least known, owing, in some measure, to the forests with which they are generally invested, to the rains, to ferocious beasts of prey, and to the unhealthiness of the coasts. The portions which I have myself visited, have not offered any striking variation in natural productions from the adjoining countries; and I only remarked a cooler climate than in the vicinity of the northern tropic. It appears, however, that some of the most remarkable objects in the vegetable and animal creation have their home precisely under the equator. The races of men could all be conveniently derived from the same two centres, the one in the East Indies and the other in Africa; and if we could suppose separate species, this, agreeably to known laws, would reconcile the geographical portion of the subject. The objection of the slight external differences would not of itself be sufficient, for it is found in the organic world, that species differ by peculiarities which tend merely to change the aspect, while any radical change of structure involves the habits of life, and marks out a genus or group; in other words, that specific characters are external, while generic characters are anatomical. On the other hand, a very decided change may take place in the aspect, without a specific difference, as is more particularly the case in domestic animals and plants. Among these, moreover, we occasionally observe new varieties springing up at a distance from the original locality. Thus, new varieties of plums, apples, and pears have made their appearance in America since the introduction from abroad of the parent stocks. Not so, however, with the human family. Notwithstanding the mixtures of race during two centuries, no one has remarked a tendency to the development of a new race in the United States. In Arabia, where the mixtures are more complicated, and have been going on from time immemorial, the result does not appear to have been different. On the Egyptian monuments I was unable to detect a change in the races of the human family. Neither does written history afford evidence of the extinction of one physical race of men, or of the development of another previously unknown. It is true, varieties appear to have more permanence in certain kinds of animals than in others. Thus, the breed of sheep, figured on the most ancient Egyptian monuments, is unknown at the present day, and at least one variety of the bullock formerly known in Egypt, has in like manner become extinct. On the

other hand, among the many varieties of the dog figured at Beni-Hassan (anterior to the Pharaonic ages), two have been pronounced identical with the greyhound and the turnspit now existing. Within my own observation, I have found no tendency in varieties to revert, in the course of successive generations, to the original type. But this whole subject of varieties has received from naturalists very little attention, and when it shall be better understood, it may, perhaps, throw light upon the origin of the races of the human family. There is, I conceive, no middle ground between the admission of eleven distinct species in the human family, and the reduction to one. The latter opinion, from analogy with the rest of the organic world, implies a central point of origin. Further, zoological considerations, though they do not absolutely require it, seem most to favour a centre on the African continent. Confirmatory circumstances of a different character are not wanting, some of which may be worth enumerating. In the first place, we have no less than five races actually inhabiting Tropical Africa, while the diversity diminishes as we recede, until districts of greater territorial extent are inhabited by but a single race. Again, some accordance may be found in the history and habits of the Arab tribes, holding, as they do, the country interposed between the heart of Africa and extensive and important seats of population; while these are occupied in regular succession by pastoral and agricultural nations. The disowning too, by the Desert tribes, of such individuals as take up agricultural pursuits, looks very like the incipient extension of population. There is something, also, in the fixed condition of the African tribes, on which Time, in some instances, seems scarcely to make an impression; something in the near approach to the absence of invention, or of the spontaneous evolution of knowledge; something in the seeming yielding of civilisation before barbarism; and in the bounds prescribed to ambition, from the general failure of attempts to colonise this continent; Africa, under various guise, having been always sending forth streams of population, and at the same time prohibiting a return." These views, treating the question of man's origin purely as one of natural history, are moderately stated; but the main deduction at present to be made from them seems to be this, that they only add fresh confirmation to the theory of man's unity, by showing that no well-defined groups of the human family have yet been found, which can be fairly and philosophically regarded as representing separate species, distinguished from each other by such wide and impassable diversities as to establish a different origin, or invalidate the scriptural doctrine of the original unity of all the families of mankind.

THE END.
